Contents

<i>List of contributors</i>	ix
<i>Preface</i>	xi
1 Principles of Mössbauer spectroscopy	
<i>Dominic P. E. Dickson and Frank J. Berry</i>	
1 Introduction	1
2 The Mössbauer effect	2
3 Mössbauer spectroscopy	4
4 Factors determining the Mössbauer spectrum	7
4.1. Isomer shift	8
4.2. Quadrupole splitting	9
4.3. Magnetic splitting	11
4.4. Time-dependent effects, relaxation and dynamics	12
5 Applications of Mössbauer spectroscopy	14
2 Mössbauer spectroscopy and the chemical bond	
<i>R. V. Parish</i>	
1 Introduction	17
2 Isomer shift as a probe for bonding	17
2.1. Isomer shift and electron density	17
2.2. Isomer shift and oxidation state	20
2.3. Isomer shift and the nature of the ligand	23
2.4. Partial isomer shifts	33
2.5. Comparisons with other methods	37
2.6. Correlation of isomer shift with electron configuration	39
3 Quadrupole splitting as a probe for bonding	41
3.1. The quadrupole interaction and electric field gradients	41
3.2. The interpretation of quadrupole splitting	43
3.3. Semi-quantitative treatments of the electric field gradient	49

4	Bonding in transition metal complexes	61
4.1.	Deductions from partial isomer shift and partial quadrupole splitting scales	61
4.2.	Deductions from ligand parameters	65
5	Summary and conclusions	68
3	Mössbauer spectroscopy as a structural probe	
	<i>Gary J. Long</i>	
1	Introduction	70
2	Organometallic compounds	71
2.1.	Introduction	71
2.2.	$\text{Fe}_3(\text{CO})_{12}$	71
2.3.	Derivatives of $\text{Fe}_3(\text{CO})_{12}$	75
3	High spin iron(II) coordination complexes	82
3.1.	Introduction	82
3.2.	Iron pyridine complexes	86
3.3.	Phthalocyanine iron (II)	93
3.4.	Phase transitions in iron(II) hydrates and ammoniates	97
4	Spin state crossover in iron(II)	106
4.1.	Introduction	106
4.2.	Iron(II) phenanthroline complexes	107
4.3.	Light-induced excited state spin trapping	116
5	Low spin iron(II) in iron pyrite	119
6	High spin iron(III) complexes	121
6.1.	Introduction	121
6.2.	Tetraphenylporphinato-iron(III) methoxide	122
7	Mixed valence compounds	124
7.1.	Introduction	124
7.2.	Mixed valence iron fluoride hydrates	126
7.3.	Prussian Blue: $\text{Fe}_4[\text{Fe}(\text{CN})_6]_3 \cdot 14\text{H}_2\text{O}$	129
7.4.	Mixed valence ferrocene derivatives	132
7.5.	Ilvaite: a mixed valence mineral	133
8	Dynamic structural studies	137
9	Conclusions	140
4	Mössbauer spectroscopy of magnetic solids	
	<i>M. F. Thomas and C. E. Johnson</i>	
1	Introduction	143
1.1.	Classes of interaction	143
1.2.	The spin Hamiltonian	145
1.3.	The mechanism of the magnetic hyperfine interaction	147
1.4.	The Mössbauer spectrum	150
1.5.	Examples	153
1.6.	Magnetic features and interactions	157
2	Studies of magnetic ordering	158
2.2.	Temperature-induced ordering	158

2.2. Field-induced ordering	159
3 Magnetic structure	162
4 Magnetic phase transitions in antiferromagnets	166
5 Low-dimensional magnetism	174
5.1. Magnetic dimensionality and spin anisotropy	174
5.2. Magnetic ordering	176
5.3. Investigations of quasi one-dimensional magnetic systems	177
6 Disordered systems and small particles	183
6.1. Disordered systems	183
6.2. Small particles	191
7 Conclusions and future developments	197
5 Time-dependent effects and relaxation in Mössbauer spectroscopy	
<i>S. Dattagupta</i>	
1 Introduction	198
2 Motion of the Mössbauer nucleus	200
2.1. Lattice dynamics	200
2.2. Diffusion	201
3 Relaxation in Mössbauer spectroscopy	204
3.1. General considerations	204
3.2. Timescales in relaxation phenomena	207
3.3. More complex timescale considerations	208
3.4. Examples of relaxation phenomena in Mössbauer spectra	210
3.5. Comparisons with other techniques	217
6 The dynamics of nuclei studied by Mössbauer spectroscopy	
<i>E. R. Bauminger and I. Nowik</i>	
1 Introduction	219
2 Dynamics of nuclei in crystals	222
2.1. The recoil-free fraction	222
2.2. Local modes	224
2.3. Anisotropy in the recoil-free fraction	227
2.4. The Goldanskii–Karyagin effect	228
2.5. Thermal shift	230
2.6. Comparison with heat capacity measurements	231
3 Dynamics associated with phase transitions	232
3.1. Structural transitions	232
3.2. Magnetic ordering and spin reorientation transitions	232
3.3. Glass–liquid and solid–liquid transitions	233
4 Diffusion in liquids and solids	235
4.1. Introduction	235
4.2. Diffusion in liquids	238

4.3. Diffusion in solids	240
4.4. Diffusion in a cage	242
5 The dynamics of diffusion in biological and macromolecular systems	244
5.1. Introduction	244
5.2. The theoretical model	245
5.3. Bounded diffusion in proteins	250
5.4. Bounded diffusion in polymers	256
6 Comparisons with other techniques	256
7 Conclusions	259
