DIGITAL MICROWAVE RECEIVERS

Theory and Concepts

James Bao-Yen Tsui

Air Force Wright-Patterson Aeronautical Laboratories

Artech House

Contents

Preface		ix
Chapter 1	INTRODUCTION	1
1.1	Introduction	1
1.2	Requirements of EW Receivers	2
1.3	Parameters Measured by EW Receivers	4
1.4	Postdetection Receivers	6
1.5	Predetection Receivers	7
1.6	Special Postdetection Receivers	10
1.7	Signal Processing Requirements for EW Receivers	10
1.8	Classification of Spectrum Estimations	11
1.9	Comments	14
Chapter 2	BASIC DIGITAL RECEIVER CONCEPT	17
2.1	Introduction	17
2.2	Digital-to-Analog Converters	18
2.3	Analog-to-Digital Converters	21
2.4	Successive Approximation A/D Converters	24
2.5	Series Feed-Forward A/D Converters	28
2.6	Parallel Comparison A/D Converters	31
2.7	Series and Parallel Feed-Forward A/D Converters	32
2.8	Sample and Hold Circuit	35
2.9	Evaluation of A/D Converters	37
2.10	Basic Receiver Considerations	45
2.11	Two-Channel Approach	49
2.12	Two Sampling Rate Approach	53
2.13	Other Considerations of Digital Approaches	56
2.14	Some Considerations on Data Processing	57
2.15	Summary	61

Chapter 3	NONPARAMETRIC FREQUENCY ESTIMATIONS	65
3.1	Introduction	65
3.2	Fourier Transform	65
3.3	Dirac Delta Function	67
3.4	Fourier Series and Fourier Transform	68
3.5	Convolution	74
3.6	Discrete Fourier Transform	78
3.7	Properties of Discrete Fourier Transform	84
3.8	Window Functions	85
3.9	Signal Frequency above Nyquist Sampling Rate	90
3.10	Fast Fourier Transform	94
3.11	Periodogram	105
3.12	Autocorrelation (Blackman-Tukey) Method	107
3.13	Minimum Variance Method	109
3.14	Summary	115
Chapter 4	AUTOREGRESSIVE METHODS	119
4.1	Introduction	119
4.2	z Transforms	119
4.3	Linear Prediction	123
4.4	Power Spectrum of Linear Prediction	124
4.5	Autoregression Method and the Yule-Walker Equation	125
4.6	Levinson-Durbin Algorithm	131
4.7	Data Manipulation	132
4.8	Backward Prediction	138
4.9	Modified Covariance Method	140
4.10	Burg Method	142
4.11	Burg-Related Methods	145
4.12	Adaptive Methods	147
4.13	Autoregression Order Selection	152
4.14	Noise Effect on AR Models	154
4.15	Frequency Determination	154
4.16	Moving Average (MA) and Autoregression Moving Average (ARMA)	156
4.17	Summary	160
Chapter 5	HARMONIC DECOMPOSITION	163
5.1	Introduction	163
5.2	Basic Discussion of Pisarenko Method	163
5.3	Basic Pisarenko Method with Real Valued Data	169
5.4	Pisarenko Method for Multiple Signals	172
5.5	Conventional Method of Solving Special Nonlinear Simultaneous Equations	174

5.6	Simple Illustration of Prony's Method	176
5.7	Prony's Method for Multiple Sinusoidal Waves	179
5.8	Extended Prony's Method	184
5.9	Singular-Value Decomposition and Pseudoinverse Matrix	188
5.10	Singular-Value Decomposition for Spectrum Analysis	197
5.11	Summary	200
Chapter 6	ANALOG AUTOCORRELATIONS	203
6.1	Introduction	203
6.2	Diode Correlators	204
6.3	Correlators in IFM Receivers	206
6.4	Interpretation of Correlator Output	211
6.5	Some Possible Frequency Estimate Methods	214
6.6	Test of Single-Signal Condition	218
6.7	Sinusoidal Waves with Close Frequencies	219
6.8	Fine Frequency Encoders	221
6.9	Single-Signal Frequency Encoding	223
6.10	Two-Frequency Ambiguity Problem	225
6.11	A Possible Solution of the Two-Signal Ambiguity Problem	227
6.12	Optical Correlators	229
6.13	Summary	233
Chapter 7	ANGLE OF ARRIVAL MEASUREMENTS	235
7.1	Introduction	235
7.2	Input Signals to a Linear Antenna Array	236
7.3	Fourier Transform on a Linear Antenna Array	238
7.4	Requirements on AOA Measurements	240
7.5	An Example of Spatial Fourier Transform	242
7.6	Spatial Autocorrelation	244
7.7	Frequency and AOA Correlations	245
7.8	Butler Matrix	250
7.9	A Simple AOA System	254
7.10	Circular Antenna Array	256
7.11	Applications of the Circular Antenna Array	264
7.12	Summary	265
Chapter 8	APPROACHES TO SIGNAL SORTING AND IDENTIFICATION	267
8.1	Introduction	267
8.2	Differences between Analog and Digital Receivers	267
8.3	Basic Radar Signal Sorting	268
8.4	Signal Replica	270
8.5	Signal Replica Used as a Matched Filter	271

8.6	Orthogonal Transform	274
8.7	Karhunen-Loève (K-L) Transform	277
8.8	Walsh Transform	281
8.9	Walsh-Hadamard Transform	287
8.10	Haar Transform	289
8.11	Discrete Cosine Transform	290
8.12	Slant Transform	292
8.13	Hartley Transform	298
8.14	Wigner Transform	299
8.15	Summary	300
Chapter 9	TYPICAL SIGNAL CONDITIONS FOR EVALUATION OF MICROWAVE RECEIVERS	303
9.1	Introduction	303
9.2	Basic Signal Characteristics	303
9.3	Signal-to-Noise Ratio	308
9.4	Two Sinusoidal Signals	309
9.5	Linear FM and Sinusoidal Signals	316
9.6	BPSK and Pulsed Signals	317
9.7	Multiple Sinusoidal Signals	320
9.8	Central Limit Theorem and Generation of Gaussian Noise	321
9.9	Summary	324
Appendix A	REVIEW OF MATHEMATICS	325
A.1	Introduction	325
A.2	Probability	325
A.3	Probability Density Function	328
A.4	Expectation, Mean, Variance, and Standard Deviation	331
A.5	Moment Generating and Characteristic Functions	334
A.6	Normal Distribution and Confidence Intervals	336
A.7	Binomial and Poisson Distributions	339
A.8	Maximum Likelihood Estimation	342
A.9	Matrix Operations	348
A.10	Least Squares Estimation	353
A.11	Time Series Analysis	360
A.12	Power Spectrum	370
A.13	Cramer-Rao Bound	376
A.14	Summary	384
Index		387
