CONTENTS

CHAPTER 1	ROBOTIC SYSTEMS	1
1.1	Applications of Robot Manipulators	2
1.2	What Is a Robot?	3
1.3	Components of Robotic Systems	15
1.4	Sensory-Based Robot Manipulators	29
1.5	Summary	30
CHAPTER 2	KINEMATICS FOR MANIPULATOR JOINTS, LINKS, AND GRIPPER	35
2.1	Coordinate Frames and Transformations for a Planar Manipulator	36
2.2	Determination of Rectangular Coordinate Frames for Manipulator Links (Joints)	41
2.3	Orientation of End-Effector	58
2.4	Summary	69
CHAPTER 3	INVERSE SOLUTION TO KINEMATIC EQUATIONS	77
3.1	Calculation of Inverse Transformation between Coordinate Systems	78
3.2	An Inverse Kinematic Solution: Roll-Pitch-Yaw Angles from Rectangular Coordinates	85
3.3	Inverse Solution to Kinematic Equations of Stanford/JPL Manipulator	89
3.4	Summary	96
CHAPTER 4	GENERALIZED VELOCITY AND TORQUE RELATIONS IN JOINT AND BASE COORDINATES	103
4.1	Velocity and Acceleration in Fixed and Rotating Coordinate Systems	103
4.2	Jacobian Matrix Relates Cartesian Velocities and Joint Velocities	113
4.3	Generalized External Forces and Joint Torques Related by Jacobian Matrix	126

4.4 Rotational and Translational Accelerations in Base Coordinate Systems	131
4.5 Summary	134
CHAPTER 5 DETERMINATION OF DYNAMICAL MODELS FOR MANIPULATORS	141
5.1 Differential Equation Model from Lagrange Function	142
5.2 Dynamical Manipulator Model Using Lagrange Formulation	146
5.3 Differential Equation Model in Newton–Euler Formulation	154
5.4 Dynamical Manipulator Model Using Newton–Euler Formulation in Local Coordinate Frame	163
5.5 Computational Robot Dynamics	176
5.6 Summary	178
CHAPTER 6 STATE VARIABLE REPRESENTATION AND LINEARIZATION OF NONLINEAR MODELS	191
6.1 State Variable Representations for Dynamical Models	192
6.2 Methods for Linearizing Nonlinear Dynamical Models	202
6.3 Linear Dynamical Models	211
6.4 Summary	219
CHAPTER 7 TRAJECTORY PLANNING FOR MANIPULATOR MOTION	227
7.1 Formulation of Planning Problem	228
7.2 Generation of Desired Trajectory for Straight Line Motion	230
7.3 Spline Functions Describe Desired Trajectory for Manipulator Motion	243
7.4 Generation of Desired Trajectory to Avoid Obstacles	252
7.5 Summary	258
CHAPTER 8 PRIMARY AND SECONDARY CONTROLLER DESIGN FOR GROSS MOTION OF MANIPULATORS	269
8.1 Design Specifications Based on Second-Order Linear Underdamped SISO Reference Model	270
8.2 Controller Design for Manipulator Gross Motion	276
8.3 Discussion on Optimum Controller Design	295
8.4 Summary	297
CHAPTER 9 ADAPTIVE CONTROL OF MANIPULATOR GROSS MOTION	305
9.1 Adaptive Self-Tuning Control of Joint Space Variables	306
9.2 Stochastic Time-Series Model for Joint Velocity to Design Self-Tuning Controller	339

9.3 Multivariable Self-Tuning Controller for Manipulator Gross Motion	345
9.4 Comments on Adaptive Controller Design for Manipulator Gross Motion	363
9.5 Summary	366
CHAPTER 10 CONTROL OF GENERALIZED CONTACT FORCES EXERTED BY ROBOT MANIPULATOR	377
10.1 Modeling of Soft Contact and Control of External Generalized Force Exerted by End-Effector	378
10.2 Adaptive Position Velocity Force (PVF) Control with Self-Tuning in Base Coordinate System	403
10.3 Hard Environmental Contact Forces Exerted by a Manipulator	409
10.4 Indirect PVF Control Using Pseudovelocities and a Reduced-Order Model	415
10.5 Discussion	420
10.6 Summary	421
APPENDIX A HAMILTON'S PRINCIPLE AND EULER-LAGRANGE EQUATIONS FOR DYNAMICAL SYSTEMS	431
A.1 Hamilton's Principle	431
A.2 Euler-Lagrange Equations	433
APPENDIX B EQUATIONS OF MOTION FOR A SERIAL LINK MANIPULATOR IN LAGRANGE FORMULATION	437
APPENDIX C EQUATIONS OF NEWTON AND EULER FOR DYNAMICAL MODELING	443
APPENDIX D REVIEW OF SELF-TUNING CONTROLLER DESIGN BY THE EXPLICIT METHOD	447
D.1 Determination of Difference Equation Model	447
D.2 Adaptive Self-Tuning Controller Design	460
INDEX	465
