Contents.

	Page
Classical Electrodynamics. By Dr. M. PHILLIPS, Lecturer in Physics of the Washington University, St. Louis, Missouri (USA). (With 14 Figures)	1
Introduction	1
I. The basic laws of electrodynamics: MAXWELL'S equations	3
II. Electrostatics	11
III. Magnetostatics	21
IV. Rapidly variable fields	29
V. The relation of fields to macroscopic sources	46
VI. Classical electron fields	61
VII. Classical theory of dispersion and scattering	84
VIII. Hamiltonian formulation of the field equations	100
Appendices	104
General references	107
The Special Theory of Relativity. By Dr. P. G. BERGMANN, Professor of Physics at Syracuse University, Syracuse, New York (USA) and Visiting Professor of Physics at Yeshiva University (USA). (With 1 Figure)	109
A. Foundations	109
I. Preliminaries	109
II. EINSTEIN'S special theory of relativity	115
III. The Minkowski universe	125
B. Relativistic mechanics and electrodynamics	144
I. The mechanics of mass points	144
II. Continuum mechanics	159
III. Electrodynamics	166
C. Relativistic quantum theory	181
I. Quantum mechanics	181
II. Quantum field theory	193
The General Theory of Relativity. By Dr. P. G. BERGMANN, Professor of Physics at Syracuse University, Syracuse, New York (USA) and Visiting Professor of Physics at Yeshiva University (USA)	203
A. The original version of the theory	203
I. Foundations	203
II. Formulation of the theory	215
III. Inclusion of non-gravitational fields	235
B. Invariant description of the field	247
Bibliography	272
Sachverzeichnis (Deutsch-Englisch)	273
Subject Index (English-German)	282
