# Introduction to the Theory of the Integer Quantum Hall Effect

Edited by János Hajdu

Weinheim · New York · Basel · Cambridge · Tokyo

# Contents

**1 Introduction** 5

**2 Basic Facts** 11
- 2.1 The Integer Quantum Hall Effect . . . . . 11
- 2.2 Classical Dynamics . . . . . 17
- 2.3 Quantizing Magnetic Fields . . . . . 19
- 2.4 The Eigenvalue Problem . . . . . 20
- 2.5 The Landau Model . . . . . 24
- 2.6 Models of Confinement . . . . . 28
- 2.7 Bloch Representation . . . . . 31
- 2.8 Disorder Broadening . . . . . 34
- Summary . . . . . 41
- Guide for Further Reading . . . . . 41

**3 Quantum Hall Effect for Pedestrians** 43
- 3.1 High Field Model . . . . . 46
- 3.2 Confined Cylinder Model . . . . . 52
- 3.3 Spectral Conditions for the Quantum Hall Effect . . . . . 57
- 3.4 Systems with Contacts . . . . . 61
- 3.5 Robustness of the Quantum Hall Effect . . . . . 65
- Summary . . . . . 70
- Guide for Further Reading . . . . . 70

**4 Linear Response** 71
- 4.1 Isothermal Susceptibilities . . . . . 71
- 4.2 Dynamic Susceptibilities . . . . . 73
- 4.3 Conductivity Tensor . . . . . 77
- 4.4 Spectral Decomposition . . . . . 81
- 4.5 Conductivities in Spectral Decomposition . . . . . 84
- 4.6 Hall Conductivity in Terms of the Center Coordinates . . 87
- 4.7 Multi-Probe Systems . . . . . 89
- 4.8 Conductance and Geometry . . . . . 93
- 4.9 Problems in Magnetotransport Calculations . . . . . 96
- Summary . . . . . 102
- Guide for Further Reading . . . . . 103

**5 Phenomenology of Global Conductivities 105**
5.1 Quantum Langevin Equation . . . . . 105
5.2 Mori Theory . . . . . 107
5.3 Localization Criteria . . . . . 109
5.4 Hall Plateaus and Mobility Edges . . . . . 114
5.5 Finite Temperatures . . . . . 120
Summary . . . . . 125
Guide for Further Reading . . . . . 125

**6 Localization in High Landau Bands 127**
6.1 Quantum Corrections to the Conductivity . . . . . 128
6.2 Quantum Wires . . . . . 130
6.3 Weak Localization Regime in the Quantum Hall Effect . 131
6.4 Localization in the Tails of High Landau Bands . . . . . 135
Summary . . . . . 138
Guide for Further Reading . . . . . 138

**7 Averaging Green Functions 139**
7.1 Gaussian Path Integrals . . . . . 139
7.2 Supersymmetry Method . . . . . 142
7.3 Replica Trick . . . . . 146
7.4 The Instanton Free Energy . . . . . 147
Summary . . . . . 150
Guide for Further Reading . . . . . 150

**8 Localization in the Lowest Landau Band 151**
8.1 Density of States . . . . . 151
8.2 Improved Perturbation Methods . . . . . 154
8.3 Inverse Participation Number . . . . . 158
8.4 Instanton Method – Density of States . . . . . 160
8.5 Localization in Band Tails . . . . . 162
8.6 Quantization of the Hall Conductivity . . . . . 166
Summary . . . . . 170
Guide for Further Reading . . . . . 170

**9 General Aspects of Critical Phenomena 171**
9.1 Order Parameter and Generating Functional . . . . . 171
9.2 Homogeneity Assumptions and Scaling . . . . . 176
9.3 Correlation Exponents . . . . . 178
9.4 Renormalization and $\beta$-Functions . . . . . 179
9.5 Unusual Aspects of the Localization-Delocalization Transition . . . . . 183
Summary . . . . . 185
Guide for Further Reading . . . . . 186

**10 Finite Size Scaling 187**
10.1 The Anderson Model . . . . . 188
10.2 Transfer Matrices and Lyapunov Exponents . . . . . 191
10.3 Transfer Matrices and the Landauer Formula . . . . . 193
10.4 Lyapunov Exponents . . . . . 196
10.5 The Transfer Matrix Method . . . . . 198
10.6 Do It Yourself . . . . . 199
10.7 The Green Function Method . . . . . 202
10.8 One-Parameter Scaling . . . . . 204
Summary . . . . . 206
Guide for Further Reading . . . . . 207

**11 The Localization Length Exponent 209**
11.1 Lattice Models . . . . . 209
11.2 The Network Model . . . . . 211
11.3 Correlated Potentials . . . . . 214
11.4 Random Matrices and Symmetry Classes . . . . . 219
11.5 Non Quantum Hall Systems . . . . . 223
11.6 Analytical Approaches . . . . . 225
Summary . . . . . 228
Guide for Further Reading . . . . . 228

**12 Multifractal Analysis 229**
12.1 Absence of Length Scales . . . . . 229
12.2 Broad Critical Distributions . . . . . 235
12.3 Inverse Participation Numbers . . . . . 242
12.4 Generalized Multifractal Analysis . . . . . 247

12.5 Critical Exponents and Universality . . . . . 250
12.6 Bounds for the Correlation Length Exponent . . . . . 254
Summary . . . . . 257
Guide for Further Reading . . . . . 258

**A A Survey of Early Approaches** **259**
A.1 Localization Argument . . . . . 259
A.2 Gap Argument . . . . . 260
A.3 Gauge Argument . . . . . 261
A.4 Topological Approach . . . . . 263
A.5 Scattering Theoretical Approach . . . . . 269
A.6 Field Theoretical Approach . . . . . 272
Guide for Further Reading . . . . . 275
