

Handbook of

---

**ELECTRON  
SPIN  
RESONANCE**

*Data Sources, Computer Technology,  
Relaxation, and ENDOR*

*Edited by*

CHARLES P. POOLE, JR.

*and*

HORACIO A. FARACH

**AIP  
PRESS**

American Institute of Physics

New York

# CONTENTS

## CHAPTER I. DATA SOURCES

**Charles P. Poole, Jr. and Horacio A. Farach**

A. Introduction.....	1
B. Extent of the Literature .....	2
C. Textbooks and Monographs.....	7
D. Literature Reviews .....	9
E. Data Tabulations.....	14
F. Societies and Conferences.....	16
G. Conventions and Notation.....	16
H. Physical Constants and Conversion Factors .....	18
References .....	26

## CHAPTER II. COMPUTER TECHNIQUES

**Burkhard Kirste**

A. Spectrometer Control and Data Sampling.....	27
B. Data Processing and Analysis .....	29
C. Spectrum Simulation.....	33
D. Line-Shape Analysis .....	38
E. Hamiltonian Fitting.....	40
F. Literature Searches .....	41
Appendix: Simulation of Solid State ESR and ENDOR Spectra .....	43
References.....	46

## CHAPTER III. RELAXATION, BACKGROUND, AND THEORY

**Ivano Bertini, Giacomo Martini, and Claudio Luchinat**

A. Introduction.....	51
B. Relaxation Time Constants .....	52
C. Bloch Equations.....	53
D. Chemical Exchange.....	58
E. Relaxation in Diluted Solids.....	60
F. Relaxation in Liquids .....	65
G. Relaxation in Concentrated Systems.....	69
H. Experimental Techniques .....	70
References .....	76

**CHAPTER IV. RELAXATION DATA TABULATION****Ivano Bertini, Giacomo Martini, and Claudio Luchinat**

A. Introduction . . . . .	80
B. Transition Metal Ions . . . . .	80
1. $nd^n$ Transition Metal Ions in Solids . . . . .	81
2. $4f^n$ Transition Metal Ions in Solids . . . . .	92
3. $3d^n$ and $4f^n$ Transition Metal Ions in Fluid Solution. . . . .	105
a. $3d^n$ , $S = 1/2$ Ions . . . . .	105
b. $Fe^{3+}$ Low Spin $S = 1/2$ Ions . . . . .	116
c. $3d^n$ , $S > 1/2$ Ions. . . . .	120
d. $4f^n$ Transition Ions . . . . .	136
C. Solvated Electrons and Inorganic Radicals . . . . .	141
D. Organic Radicals. . . . .	158
1. Transient Species . . . . .	158
2. Nitroxides . . . . .	170
E. Motional Effects. . . . .	181
1. Nitroxides. . . . .	181
2. Transition Metal Ions . . . . .	216
3. Micelles and Other Organized Systems. . . . .	228
4. Polymers. . . . .	246
F. Exchange. . . . .	258
1. Spin-Spin Interactions and Line Shapes . . . . .	258
2. Exchange Relaxation. . . . .	261
3. Chemical Exchange . . . . .	286
4. Interspecies Heisenberg Spin Exchange . . . . .	291
References. . . . .	302

**CHAPTER V. ENDOR SPECTROSCOPY****Lidia Piekara-Sady and Lowell D. Kispert**

A. Introduction: Fundamentals of Magnetic Resonance. . . . .	312
1. EPR Background. . . . .	313
2. NMR Background. . . . .	314
3. Thermal Equilibrium and Magnetic Relaxation . . . . .	316
4. Hyperfine Interaction . . . . .	317
a. Isotropic Hyperfine Coupling Constant "a" . . . . .	317
b. Anisotropic Hyperfine Coupling . . . . .	318
5. Quadrupole Interaction. . . . .	318
B. ENDOR Fundamentals . . . . .	318
1. Energy Levels and Transitions. . . . .	318
2. ENDOR Experiment. . . . .	322
3. ENDOR Mechanism. . . . .	324
a. Enhancement of Radio-Frequency Field at the Nucleus . . . . .	325
b. Signal Intensity . . . . .	325

4. Extension of ENDOR: TRIPLE Resonance .....	326
a. Special TRIPLE (ST) .....	326
b. General TRIPLE (GT).....	327
C. ENDOR in Liquid Phase.....	327
1. Introduction.....	327
2. Analysis of Liquid Phase Spectra .....	330
3. Variables Important in Liquid Phase ENDOR.....	331
a. Radical Concentration .....	331
b. Solvent and Temperature.....	331
c. Microwave and Radio-Frequency Field Strengths .....	332
d. Different Nuclei .....	332
4. Separation of Overlapping Spectra: Identification of the Radical ..	332
5. Selected Examples in Isotropic Fluid Solution.....	334
a. Application to Electronic Structure .....	334
b. Hindered Rotation of Molecular Fragments.....	338
6. Liquid Crystal Solvents.....	339
D. ENDOR in the Solid State .....	339
1. Single Crystals .....	339
a. Hyperfine Interactions .....	339
b. Quadrupole Couplings .....	341
c. Free Radicals.....	344
d. Interpretation of the Hyperfine Tensors .....	344
e. Transition Metal Ions.....	345
f. Triplet State ENDOR.....	346
2. Disordered Solids.....	349
a. Powder-Type Spectra .....	351
b. Crystal-Like Spectra.....	351
E. Pulsed ENDOR.....	354
References.....	356

## CHAPTER VI. ENDOR DATA TABULATIONS

Janina Goslar, Lidia Piekara-Sady, and Lowell D. Kispert

A. Introduction.....	360
B. Liquid Phase $^1\text{H}$ Data.....	361
C. Liquid Phase $^2\text{H}$ Data .....	377
D. Liquid Phase $^{13}\text{C}$ Data.....	383
E. Liquid Phase $^{14}\text{N}$ and $^{15}\text{N}$ Data .....	395
F. Liquid Phase $^{19}\text{F}$ Data .....	405
G. Liquid Phase $^{31}\text{P}$ Data.....	411
H. Liquid Phase Alkali Nuclei Data .....	412
I. Liquid Phase $^{27}\text{Al}$ Data.....	418
J. Liquid Phase $^{203}\text{Tl}$ and $^{205}\text{Tl}$ Data .....	419
K. Liquid Phase $^{117}\text{Sn}$ and $^{119}\text{Sn}$ Data .....	420

L. Liquid Phase $^{29}\text{Si}$ Data . . . . .	421
M. Liquid Phase $^{25}\text{Mg}$ Data . . . . .	424
N. Radicals in Liquid Crystalline Solutions . . . . .	426
O. Organic Radicals in Polycrystalline and Solution Media . . . . .	444
P. Organic Radicals in Organic Host Crystals . . . . .	451
Q. Radicals Trapped in Matrices . . . . .	531
R. Triplet-State Radicals . . . . .	533
S. Free Radicals in Biological Systems. . . . .	535
T. Polymeric Systems. . . . .	547
U. Small Inorganic Radicals . . . . .	551
V. Inorganic Paramagnetic Complexes in Inorganic Single Crystals . . . . .	553
W. Paramagnetic Centers in Inorganic Host Crystals . . . . .	571
X. Inorganic Paramagnetic Ions in Organic Host Crystals. . . . .	574
Y. Transition Metal Ion Complexes in Frozen Solutions and Powders. . . . .	593
Z. Defects and Complexes on Surfaces . . . . .	606
AA. Impurity Centers in Semiconductor Host Crystals . . . . .	612
BB. Spin Centers in Silicon . . . . .	614
CC. Paramagnetic Centers in Cubic Host Crystals . . . . .	620
DD. Perovskite-Type Materials . . . . .	623
EE. Fossil Fuels, Derivatives, and Related Products . . . . .	627
Index of Materials. . . . .	629

**Subject Index**
