Contents

LIST OF CONTRIBUTORS	xiii
PREFACE	xv

Chapter 1 Introduction to Oxygen in Silicon

F. Shimura

Chapter 2 The Incorporation of Oxygen into Silicon Crystals

W. Lin

I. Introduction	9
II. Silicon Crystal Growth	10
1. Float Zone Silicon Growth	10
2. Czochralski Silicon Growth	12
III. Characteristics of Czochralski Silicon Growth	15
1. Dopant Distribution	15
2. "Unintended Dopants"	16
3. Effective Segregation Coefficient	19
4. Convection Flows in Czochralski Melt	20
5. Macroscopic Radial Impurity Uniformity	21
6. Microscopic Inhomogeneity in Czochralski Silicon	22
IV. Oxygen Incorporation and Segregation in Czochralski Silicon Growth	24
1. Incorporation Mechanism	24
2. Oxygen Segregation and Microscopic Inhomogeneity	34
V. Controlled Oxygen Silicon Growth	37
1. Normal Czochralski Growth	37
2. Magnetic Field Applied Czochralski Growth (MCZ)	42
3. Continuous Czochralski Silicon Growth	46
VI. Summary	50
References	50

Chapter 3 Characterization Techniques for Oxygen in Silicon

T. J. Shaffner and D. K. Schroder

I. Introduction	53
II. Physical Techniques	55
1. Infrared Spectroscopy	55

2. Transmission Electron Microscopy	58
3. X-Ray Diffraction and Topography	62
4. Secondary Ion Mass Spectrometry	66
III. Chemical Techniques	69
1. Defect Etches	69
2. Inert Gas Fusion	72
3. Activation Analysis Techniques	74
IV. Electrical Techniques	77
1. Deep Level Transient Spectroscopy	78
2. Recombination Lifetime	79
3. Generation Lifetime	81
V. Summary	85
References	86

Chapter 4 Oxygen Concentration Measurement

W. M. Bullis

I. Introduction	95
II. Infrared Absorption Measurements Under Ideal Conditions	99
III. Infrared Spectrometers	102
1. Dispersive Infrared Spectrometers	102
2. Fourier-Transform-Infrared Spectrometers	107
IV. Analysis of Oxygen Spectra	113
1. Baseline	113
2. Analysis Method: Peak Height or Integrated Area?	115
3. Multiple Reflection and Interference Fringes	118
4. Spectrum Collection Method: Air Reference or Difference?	121
5. Reference Specimen Characteristics	121
6. Back-Surface Condition	122
7. Free-Carrier Absorption	128
8. Interference from Absorption Peaks Due to Precipitates	134
9. Specimen Temperature	135
V. Absolute Determinations and Calibration Factors	136
1. Calibration Factors for Room Temperature Measurements	136
2. Routine Absolute Measurements in Heavily Doped Silicon	142
VI. Standards and Reference Materials	144
1. Standard Test Methods	144
2. Certified Reference Materials	145
VII. Summary	147
Acknowledgments	147
References	148

Chapter 5 Intrinsic Point Defects in Silicon

S. M. Hu

I. Introduction	153
II. Swirl Defect Manifestation of Intrinsic Point Defects	156

III. Thermal Defects in Silicon	159
IV. Self-Diffusion	160
1. Point Defects and Self-Diffusion	160
2. Self-Diffusion from Isotope Experiments	161
3. Self-Diffusion from Kinetics of Extended Defects	162
V. Coexistence of Vacancies and Self-Interstitials in Silicon	164
VI. Interstitial Configuration and Charge-Enhanced Migration	166
1. Geometrical Configurations and Migration Pathways of the Self-Interstitial	166
2. Charge-Enhanced and Athermal Migration of the Self-Interstitial	170
VII. Formation and Migration Parameters of Point Defects	172
1. Studies of Point Defects from Irradiations	172
2. Vacancy Formation Energy from Positron-Lifetime Measurements	175
3. Point Defect Concentrations from Thermal Expansion Measurements	175
4. Estimation of Self-Interstitial Concentration from Oxygen Precipitation	176
5. Diffusivity of the Self-Interstitial from Membrane Experiments	177
6. Defect Parameters from Model-Fitting Au and Pt Diffusion	178
VIII. Defect Energetics and Pathways from Theoretical Calculations	179
IX. Summary	184
References	185

Chapter 6 Some Atomic Configurations of Oxygen

B. Pajot

I. Introduction	191
II. Spectroscopy of Localized Modes in Semiconductors	194
1. Localized Modes and Resonant Modes	194
2. Intensities	196
3. Stress-Induced Effects	196
III. Interstitial Oxygen	200
1. Static Properties	200
2. Dynamic Properties	210
3. Perturbation by Foreign Atoms	211
IV. Quasi-Substitutional Oxygen	217
1. Spectroscopies of the Oxygen-Vacancy Defect	217
2. Thermal Stability	220
3. Other O-Related Irradiation Defects	222
V. Comparison with Other Light Element Impurities	224
1. Carbon	224
2. Nitrogen	226
3. Hydrogen	228
VI. Oxygen in Other Semiconductors	233
1. Germanium	233
2. Gallium Arsenide	236
VII. Summary	243
Acknowledgments	244
References	245

Chapter 7 Electrical Properties of Oxygen in Silicon

J. Michel and L. C. Kimerling

I. Introduction	251
II. Thermal Donors	251
1. Donor Introduction	252
2. Spectroscopy	254
3. Heat Treatment at 350–500°C	266
4. Atomic and Electronic Structure	271
5. Current Understanding and Unresolved Issues	280
III. New Donors	282
References	284

Chapter 8 Diffusion of Oxygen in Silicon

R. C. Newman and R. Jones

I. Introduction	290
II. Direct Measurements of Normal Oxygen Diffusion	292
1. Single Oxygen Diffusion Jumps	293
2. Profiles	296
3. Summary	298
III. Indirect Measurements of Normal Oxygen Diffusion	298
1. D_{oxy} Determined from Oxygen Precipitation at High Temperatures	299
2. Oxygen Aggregation at Intermediate Temperatures	303
3. Oxygen Aggregation at Low Temperatures	305
IV. Enhanced Oxygen Diffusion Not Involving Hydrogen	308
1. Effects Due to the Injection of Vacancies and I -Atoms by 2 MeV Electron Irradiation	309
2. The Effects of Excess I -Atoms	312
3. Rapid Diffusion of Di-Oxygen Defects	314
4. Effects Due to Carbon	316
5. Effects Due to Metallic Contamination	317
6. Summary	317
V. Silicon Containing Hydrogen Impurities	318
1. Silicon Heated in Hydrogen Gas	319
2. Silicon Heated in RF Plasma	323
3. An Outline Model and Summary	324
VI. Theoretical Modeling of Oxygen Diffusion	326
1. Theoretical Methods	327
2. Theory of the Diffusion Constant	331
3. Interstitial Oxygen	332
4. Diffusion of O_i Catalyzed by Hydrogen	335
5. The Oxygen Dimer	339
6. Other Oxygen Aggregates	341
VII. Constraints on Models of Thermal Donor Centers	342
VIII. Summary	345
Acknowledgments	347
References	347

Chapter 9 Mechanisms of Oxygen Precipitation: Some Quantitative Aspects

T. Y. Tan and W. J. Taylor

I. Introduction	353
II. Volume Shortage Associated with Oxygen Precipitation	357
III. Precipitate Nucleation	358
1. The Homogeneous Nucleation Model	359
2. The Strain Relief Models	362
IV. Precipitate Growth	367
1. The O_i Diffusion-Limited Precipitate Growth Behavior	367
2. The Dominant Strain Relief Mechanism: <i>I</i> -Emission	371
V. The Effect of Carbon	374
VI. Defect Generation	379
1. Si Self-Interstitial Generation	379
2. Prismatic Dislocation Loop Punching	379
VII. Summary: The Free Energy and Flux Balance Treatment of the Oxygen Precipitation Problem	386
References	387

Chapter 10 Simulation of Oxygen Precipitation

M. Schrems

I. Introduction	391
II. Model Types	393
1. Nucleation Models	393
2. Deterministic Growth Models	396
3. Combined Nucleation and Growth Models	400
4. Monte Carlo Models	402
5. Models Based on Rate or Fokker-Planck Equations	404
III. Models and Experimental Results	413
1. General Remarks	413
2. One-, Two-, and Three-Step Thermal Cycles	416
3. Multistep Thermal Cycles	424
IV. Computer-Aided Design of Oxygen Precipitation	428
1. Substitutional Annealings	428
2. Influence of Process Variations	431
V. On the Interactions of Oxygen with Other Defects	435
1. Current Models	435
2. Generalized Precipitation Equations	441
VI. Summary	443
References	444

Chapter 11 Oxygen Effect on Mechanical Properties

K. Sumino and I. Yonenaga

I. Introduction	450
II. Plastic Deformation and Dislocations in Silicon Crystals	451

III. Influence of Dispersed Oxygen Atoms on the Mobility of Dislocations in Silicon	454
1. Methodological Problems in the Measurement of Dislocation Velocities	454
2. Velocity of Dislocations in High-Purity Silicon	455
3. Velocity of Dislocations in Silicon Containing Oxygen Impurities	457
4. Morphology of Dislocations in Motion	460
5. Interpretation of the Oxygen Effect on Dislocation Velocity	461
IV. Immobilization of Dislocations by Oxygen	463
1. Release Stress of Dislocations Immobilized by Oxygen Impurities	463
2. State of Oxygen Segregated on Dislocations	464
V. Effect of Oxygen on Dislocation Generation	469
1. Generation of Dislocations	469
2. Oxygen Effect on Dislocation Generation	472
VI. Mechanical Properties of Silicon as Influenced by Oxygen Impurities	474
1. Mechanical Properties of High-Purity Silicon Crystals	474
2. Oxygen Effect on Mechanical Properties of Dislocation-Free Crystals	476
3. Oxygen Effect on Mechanical Properties of Dislocated Crystals	477
4. Theoretical Derivation of Yield Characteristics	481
5. Wafer Strengthening by Oxygen Impurities	488
VII. Influence of Oxygen Precipitation on Mechanical Strength	490
1. General Features in the Softening of Silicon Related to Precipitation of Oxygen	490
2. Yield Strength of CZ-Si with Oxygen Precipitation	493
3. Mechanism of Precipitation Softening	496
VIII. Effects of Nitrogen and Carbon Impurities on Mechanical Properties of Silicon	499
1. Nitrogen Effect	499
2. Carbon Effect	504
IX. Summary	504
References	510

Chapter 12 Grown-in and Process-Induced Effects

W. Bergholz

I. Introduction	513
II. Oxygen Precipitation During High-Temperature Processes	515
1. Overview: Morphology and Phases of Oxygen Precipitates	515
2. Factors That Determine the Type of Oxygen Precipitate	522
3. Oxygen Precipitation in Different Temperature Regimes	526
4. Multiple-Step Temperature Annealings	540
5. Other Factors That Affect Oxygen Precipitation	544
6. Oxygen-Related Defects and Process-Induced Defects	547
III. Grown-in Defects: Precipitation and Intrinsic Defect Aggregation During Crystal Growth	551
1. Oxygen Precipitation During Crystal Growth	551
2. Intrinsic Defects	552
3. Grown-in Defects and Gate Oxide Quality	564

4. Speculations on the Origin-Formation Mechanisms of Grown-in Defects	570
IV. Summary	571
References	572

Chapter 13 Intrinsic/Internal Gettering

F. Shimura

I. Introduction	577
II. Surface and Interior Microdefects	579
1. Surface Microdefects	580
2. Interior Microdefects	583
3. Summary of Process-Induced Microdefects	590
III. Gettering	593
1. General Remarks	593
2. Elimination of a Contamination Source	596
3. Intrinsic/Internal Gettering	596
IV. Oxygen Behavior in Silicon	599
1. Oxygen Effect on Silicon Wafer Properties	599
2. Oxygen Precipitation and Redissolution	599
3. Oxygen Out-Diffusion and Denuded Zone Formation	606
V. Internal Gettering Process and Mechanism	610
1. Thermal Cycle	610
2. Gettering Mechanism	611
3. Gettering Sinks	612
VI. Summary	614
References	615

Chapter 14 Oxygen Effect on Electronic Device Performance

H. Tsuya

I. Introduction	619
II. Device Characteristics and Crystal Defects	621
1. Device Structure vs. Crystalline Defects	622
2. Failure Modes in LSI Devices	623
III. Defect Generation	625
1. Oxygen Precipitate Related Modes	625
2. Residual Stress of SiO ₂ Film	628
3. Oxygen Related Defects by Ion Implantation	630
4. Oxide Film Degradation	633
5. Lattice Defect Generation Due to Heavy Metal Contamination	634
IV. Improvement of Device Yield	635
1. Intrinsic Gettering Application to VLSI	636
2. Homogenization of Precipitated Oxygen	640
3. Intrinsic Gettering Application of Epitaxial Wafers to VLSI	647
4. Getterability for Heavy Metal Impurities	651

5. Control of Mechanical Strength	652
6. Advanced Intrinsic Gettering	660
V. Summary	663
Acknowledgments	663
References	664
