SURFACE ANALYSIS BY ELECTRON SPECTROSCOPY Measurement and Interpretation

Graham C. Smith

Shell Research Ltd. Chester, England

PLENUM PRESS • NEW YORK AND LONDON

CONTENTS

| CHAPTER 1 | . INTRODUCTION | 1 |
|-----------|---|----------------------|
| CHAPTER 2 | . SURFACE ANALYSIS BY ELECTRON SPECTROSCOPY | |
| 2.1 | Surface Sensitivity | 3 |
| 2.2 | X-ray Photoelectron Spectroscopy | 3 |
| 2.3 | Auger Electron Spectroscopy | 6 |
| 2.4 | Spectral Interpretation | 9 |
| CHAPTER 3 | . INSTRUMENTAL TECHNIQUES FOR XPS AND AES | |
| 3.1 | General Requirements | 15 |
| 3.2 | Excitation Sources for Surface Analysis by XPS and AES | 16 |
| | 3.2.1 X-ray Sources 3.2.2 Electron Beam Sources | 16 18 |
| 3.3 | Electron Energy Analyzers for AES and XPS | 19 |
| | 3.3.1 Cylindrical Mirror Analyzers 3.3.2 Hemispherical Sector Analyzers 3.3.3 Multichannel Detection 3.3.4 Analyzer Calibration | 20 22 25 26 |
| 3.4 | Radiation Damage | 31 |
| 3.5 | Electrostatic Charging | 32 |
| 3.6 | Microanalysis and Spatial Resolution in AES and XPS | 33 |
| | 3.6.1 Spatial Resolution in AES 3.6.2 Spatial Resolution in XPS | 34 35 |
| CHAPTER | 4. DATA PROCESSING FOR AES and XPS | |
| 4.1 | Introduction | 41 |

| X | | | CONTENTS |
|------|-------|---|----------------------|
| | 4.2 | Data Acquisition and Display | 42 |
| | 4.3 | Smoothing | 44 |
| | 4.4 | Deconvolution | 44 |
| | 4.5 | Background Subtraction | 45 |
| | 4.6 | Curve Fitting | 47 |
| | 4.7 | Difference Spectra | 49 |
| | 4.8 | Differentiation | 49 |
| | 4.9 | Factor Analysis | 50 |
| | 4.10 | Image Processing and Multi-Spectral Imaging | 51 |
| СНАР | TER 5 | . QUANTIFICATION OF DATA FROM HOMOGENEOUS MATERIALS | |
| | 5.1 | The General Approach to Quantification | 53 |
| | 5.2 | Statistical Treatment of Cumulative Errors | 54 |
| | 5.3 | Attenuation Lengths in Electron Spectroscopy | 58 |
| | 5.4 | Accurate Quantification in XPS | 61 |
| | | 5.4.1 Calculations of Intensity 5.4.2 Accurate Relative Sensitivity Factors 5.4.3 The Measurement of Intensity | 61 64 65 |
| | 5.5 | Accurate Quantification in AES | 65 |
| | | 5.5.1 Use of Direct or Derivative Spectra in AES5.5.2 Calculations of Auger Intensities5.5.3 Matrix Factors | 65 69 70 |
| CHAP | TER 6 | . STRUCTURAL INFORMATION FROM INHOMOGENEOUS SAMPLES | |
| | 6.1 | Argon Ion Sputtering | 75 |
| | 6.2 | Non-Destructive Depth Profiling by Electron Spectroscopy | 85 |
| | | 6.2.1 Information from Simple Overlayers 6.2.2 Structural Information from Angle-Dependent XPS 6.2.3 Peak to Background Ratio Methods 6.2.4 Studies of Rough or Random Samples | 86 88 90 91 |
| СНА | TER 7 | . TRENDS IN SURFACE ANALYSIS | |
| | 7.1 | Introduction | 93 |

| CONTENTS | | X |
|------------|---|-----|
| 7.2 | Trends in Surface Analysis by XPS and AES | 93 |
| 7.3 | A Comparison of AES and XPS with Alternative Methods of Surface Analysis | 94 |
| | 7.3.1 Secondary Ion Mass Spectrometry | 95 |
| | 7.3.2 Ion Scattering Spectroscopy (ISS) | 97 |
| | 7.3.3 Electron Probe Microanalysis (EPMA) | 98 |
| | 7.3.4 Reflection Absorption Infra-red Spectroscopy (RAIRS) and Diffuse Reflection Infra-red Fourier Transform Spectroscopy (DRIFTS) | 99 |
