

The Ray and Wave Theory of Lenses

A. WALTHER

*Department of Physics
Worcester Polytechnic Institute
Worcester, Massachusetts*

CAMBRIDGE
UNIVERSITY PRESS

Contents

<i>Preface</i>	<i>page</i> xiv
Part one: Preview	1
1 Some consequences of the wave equation	3
1.1 Plane wave expansions	3
1.2 The Fourier lens	5
1.3 Perfect imaging	6
1.4 Stationary phase	9
Part two: Geometrical optics	11
2 Fermat's principle	13
2.1 Introduction	13
2.2 Refraction by a curved surface	14
2.3 Cartesian surfaces	16
<i>Exercises</i>	19
3 Path differentials	20
3.1 Characterizing a lens	20
3.2 Path differentials	20
3.3 The point eikonal	22
3.4 A reciprocity theorem	23
3.5 Symmetric camera lenses	25
<i>Exercises</i>	27
4 The structure of image forming pencils	28
4.1 The theorem of Malus and Dupin	28
4.2 Pinhole projection	29
4.3 Wavefronts	31
4.4 Narrow pencils	31
4.5 Caustics	34
4.6 The case of axial symmetry	36
<i>Exercises</i>	39

5	Eikonal transformations	40
5.1	The point angle eikonal	40
5.2	The angle and angle point eikonals	42
5.3	Reciprocity relations	43
5.4	Shifts of the reference planes	45
5.5	Compounding eikonals	46
5.6	The angle eikonal of a single refracting surface	47
	<i>Exercises</i>	49
6	Perfect images	51
6.1	The cosine rule	51
6.2	Abbe's sine rule	52
6.3	Herschel's rule	53
6.4	The perfect imaging of a plane	54
6.5	The perfect imaging of two planes	55
6.6	Example: afocal imaging	56
	<i>Exercises</i>	58
7	Aberrations	59
7.1	Introduction	59
7.2	The point angle eikonal for an imperfect lens	59
7.3	The wavefront aberration	60
7.4	The angle eikonal	63
7.5	Which eikonal?	64
7.6	Example	65
	<i>Exercises</i>	68
8	Radiometry	69
8.1	Terminology	69
8.2	Radiance invariance	71
8.3	Phase space	73
8.4	Image plane irradiance	75
	<i>Exercises</i>	78
	Part three: Paraxial optics	79
9	The small angle approximation	81
9.1	Axial symmetry	81
9.2	The small angle approximation	82
9.3	Imaging	83
9.4	Other paraxial eikonals	85
	<i>Exercises</i>	86
10	Paraxial calculations	87
10.1	Introduction	87
10.2	Notation and sign rules	87
10.3	Refraction	88
10.4	Translation	89
10.5	The system matrix	90

10.6	Imaging relations	92
10.7	Connections with projective geometry	93
10.8	Cardinal points	95
10.9	Example	97
10.10	Thin lenses	99
10.11	Magnifying power	99
10.12	Afocal systems	101
10.13	Tracing paraxial rays	102
	<i>Exercises</i>	104
11	Stops and pupils	105
11.1	Entrance and exit pupil	105
11.2	Instruments for visual use	107
11.3	Depth of focus	110
11.4	Perspective	111
11.5	Pupil distortion	111
	<i>Exercises</i>	114
12	Chromatic aberrations	115
12.1	Dispersion	115
12.2	Thin doublets	117
12.3	Apochromats	119
12.4	Airspaced doublets	120
12.5	The general case	121
	<i>Exercises</i>	122
	Part four: Waves in homogeneous media	125
13	Waves	127
13.1	Energy conservation	127
13.2	Monochromatic waves	129
13.3	An integral equation	130
13.4	The radiation condition	131
13.5	Partial coherence	131
14	Wave propagation I: exact results	135
14.1	The Rayleigh-Sommerfeld integral	135
14.2	Plane wave expansions	139
14.3	Loss of information	140
14.4	The field at infinity	141
14.5	The total energy flow	143
14.6	Waves in media with $n \neq 1$	144
14.7	Cylinder waves	145
	<i>Exercises</i>	146
15	Wave propagation II: approximations	148
15.1	The Fraunhofer approximation	148
15.2	The Fresnel approximation	149
15.3	The small angle approximation	151

<i>Exercises</i>	152
16 The stationary phase approximation	154
16.1 Introduction	154
16.2 The stationary phase approximation	155
16.3 The J_0 Bessel function	158
16.4 A case of wave propagation	159
16.5 The angular spectrum representation	161
16.6 Light rays	163
16.7 Energy considerations	164
<i>Exercises</i>	165
Part five: Wave propagation through lenses	167
17 Toward a wave theory of lenses	169
17.1 Introduction	169
17.2 The stationary phase approximation	171
17.3 The amplitude function	172
17.4 A single thin lens	174
17.5 Where do we go from here?	176
18 General propagation kernels	177
18.1 The point angle kernel	177
18.2 Other kernels	179
18.3 Further correspondences	180
18.4 Example 1: Free space propagation	182
18.5 Example 2: A plane interface	182
18.6 Example 3: A Fourier lens	184
18.7 Cylinder lenses	185
18.8 Appendix: Proof of an equality	186
<i>Exercises</i>	187
19 Paraxial wave propagation	188
19.1 Mathematical preliminaries	188
19.2 Translation	189
19.3 Refraction	190
19.4 Lens systems	192
19.5 A thin lens in air	193
<i>Exercises</i>	195
20 The wave theory of image formation	196
20.1 The point angle kernel	196
20.2 A perfect lens in air	199
20.3 The Airy disk	202
20.4 Defocussing	205
20.5 Natural amplitude variations	207
20.6 Calculations with the point eikonal	208
20.7 Object or image at infinity	211
<i>Exercises</i>	212

21 Fourier optics	213
21.1 Introduction	213
21.2 A pair of Fourier lenses	214
21.3 Other imaging systems	217
21.4 Incoherent objects	219
21.5 The modulation transfer function	220
21.6 Transfer function calculations	221
<i>Exercises</i>	224
Part six: Aberrations	225
22 Perfect systems	227
22.1 Perfect imaging	227
22.2 Flat object, curved image	229
22.3 Curved object, curved image	231
22.4 Satisfying additional conditions	233
22.5 Fortuitous perfection	235
<i>Exercises</i>	236
23 The vicinity of an arbitrary ray	238
23.1 Point eikonal relations	238
23.2 Angle eikonal relations	240
23.3 More on symmetry relations	241
23.4 Moving the reference planes	242
23.5 Imaging	243
23.6 Moving the object point	245
23.7 Implementation	245
23.8 The orthogonal case	246
23.9 Numerical example	247
23.10 Appendix: Derivation of the refraction matrices	249
<i>Exercises</i>	252
24 Third order aberrations	253
24.1 Introduction	253
24.2 Ray intercept errors	254
24.3 The five third order aberrations	257
24.3.1 Distortion	258
24.3.2 Spherical aberration	258
24.3.3 Coma	261
24.3.4 Astigmatism and field curvature	262
24.4 Imaging with a Fourier lens	264
24.5 Object and stop shifts	267
24.6 Example: shifting the pupil	269
24.7 Exchange of object and pupil	270
24.8 Shifting the object	271
24.9 Axis imaged perfectly	272
24.10 Outlook	273
<i>Exercises</i>	274

25	The small field approximation	275
25.1	Small fields and large apertures	275
25.2	Spherical aberration	277
25.3	Object points near the axis	279
25.4	Diapoints	281
	<i>Exercises</i>	282
26	Ray tracing	283
26.1	Introduction	283
26.2	Mathematical procedures	284
26.3	Interpreting the ray trace results	286
26.4	Third order aspects	288
26.5	Fifth order aberrations	291
26.6	Lens design	292
27	Aberrations and the wave theory	295
27.1	Introduction	295
27.2	Strehl definition	297
27.3	The circle polynomials of Zernike	298
27.4	Examples	299
27.5	Larger aberrations	302
27.6	The transfer function	303
27.7	Bounds on the transfer function	305
	<i>Exercises</i>	305
	Part seven: Applications	307
28	Gaussian beams	309
28.1	Gaussian beams in free space	309
28.2	The passage through lenses I	312
28.3	Three examples	313
28.4	The passage through lenses II	316
28.5	Generalized Gaussian beams	317
28.6	Numerical example	318
29	Concentric systems	320
29.1	Basic properties	320
29.2	A ray invariant	322
29.3	Paraxial properties	323
29.4	Aplanatic systems I	324
29.5	Ray tracing	326
29.6	Aplanatic systems II	327
29.7	Third order aberrations	330
	<i>Exercises</i>	332
30	Thin lenses	334
30.1	Basic properties	334
30.2	Meridional and sagittal image curvature	336
30.3	More third order theory	337

30.4	Calculation of β and γ	339
30.5	Aplanatic doublets	340
30.6	Eyeglasses	342
	<i>Exercises</i>	344
31	Mock ray tracing	345
31.1	Introduction	345
31.2	Lenses perfect for one magnification	346
31.3	Mock ray tracing with the angle eikonal	351
31.4	Mock ray tracing: an example	355
31.5	Mock lens design: Imaging a small volume	358
31.6	Outlook	363
32	Diffractive optical elements	364
32.1	Introduction	364
32.2	Self imaging	367
32.3	Zone plates	368
32.4	Generalized zone plates	370
32.5	Holograms	372
32.6	Curved interfaces	373
32.7	DOE aspherics	374
	<i>Appendix 1 Fourier transforms</i>	376
	<i>Appendix 2 Third order calculations</i>	378
	<i>Appendix 3 Ray tracing</i>	381
	<i>Appendix 4 Eikonals and the propagation kernels</i>	383
	<i>Appendix 5 Paraxial eikonals</i>	384
	<i>Appendix 6 Hints and problem solutions</i>	385
	<i>Bibliography</i>	392
	<i>Index</i>	396
