Preface xiii

Chapter 1 Basic optical principles 1

1.1 Introduction 2
1.2 Geometric optics 2
1.1.2 Snell's law and refracted rays 3
1.2.2 The matrix approach to translation of ray in material of constant refractive index 5
1.2.3 The matrix description of ray refraction at a plane interface 5
1.2.4 The matrix description of a simple composite optical system 7
1.2.5 The matrix description of refraction at a spherical surface, when the paraxial assumption applies 8
1.2.6 The matrix description of refraction by a lens 10
1.2.7 The matrix description of simple optical systems containing lenses 11
1.2.8 The imaging properties of a thin lens 12
1.2.9 Real and virtual images 13
1.2.10 The matrix description of other refracting components 15
1.2.11 The matrix description of reflecting elements 17
1.3 Polarization 19
1.3.1 The nature of unguided optical traveling waves 19
1.3.2 The Jones calculus 21
1.3.3 The Brewster effect 28
1.4 Coherence and incoherence 29
1.5 Diffraction 30
1.6 Anisotropy and non-linearity 32

Chapter 2 Fourier optics 35

2.1 Fourier integrals in optics 36
- 2.1.1 Introduction to Fourier integrals 36
- 2.1.2 The Fourier integral in one and two dimensions 36
- 2.1.3 The representation of a propagating wave as the superposition of uniform plane waves 37

2.2 Fresnel and Fraunhofer diffraction 40
- 2.2.1 Examples of Fraunhofer diffraction patterns 42

2.3 Fourier transformations performed by thin lenses 45
- 2.3.1 Focal plane transformations for a thin lens 49

2.4 The propagation of gaussian beams 51

2.5 The impulse response of optical components and systems, and the use of the optical propagator function 59
- 2.5.1 The optical propagator function Ψ 60
- 2.5.2 The quasi-Fourier transforming properties of a lens when the object is not in the front focal plane 61
- 2.5.3 The input-output relationship for a system using a point source with a transparency and a lens 63
- 2.5.4 The quasi-Fourier transform of transparency placed between a lens and its output focal plane 64

Chapter 3 Diffraction gratings and holography 69

3.1 Introduction to holography 70

3.2 The thin holographic diffraction grating 70

3.3 The general thin hologram 72

3.4 The thin transmission hologram using a uniform plane wave reference beam 73

3.5 Holograms of three-dimensional objects 77

3.6 The angular spectrum of hologram output 78

3.7 Thick holographic amplitude modulated gratings 83

3.8 Reading thick amplitude gratings 84

3.9 The Bragg effect 87

3.10 Thick phase modulated gratings 89

3.11 The diffraction efficiency of gratings, and the coupled wave equations 91

3.12 Thick holograms 94

3.13 The hologram of a two-dimensional object, and the Fourier hologram 95
- 3.13.1 Fourier holography 95

3.14 Computer-generated holograms 99
- 3.14.1 Computer-generated Fourier transform holograms 100

Chapter 4 Optical materials and their properties 109

4.1 Tensor preliminaries 110
- 4.1.1 Introduction 110
- 4.1.2 Summation notation 110
- 4.1.3 Tensor transformation rules 110

4.1.4 Tensor description of optical and electrical properties of materials 111
4.1.5 The influence of crystal symmetry and thermodynamics upon tensor components 112
4.2 Natural optical birefringence 113
4.2.1 Fresnel's equations 113
4.2.2 Uniaxial materials 115
4.2.3 Applications of natural birefringence 119
4.3 Controlled birefringence 123
4.3.1 The source and nature of controlled birefringence 123
4.3.2 The electro-optic or Pockels effect 124
4.3.3 The transverse switching modulator 125
4.3.4 The longitudinal switching modulator 129
4.3.5 Bulk phase and amplitude modulators 130
4.3.6 Transit time limitations of bulk modulators 132
4.4 Optical activity 133
4.5 Eigenmodes and eigenvectors of waves propagating in anisotropic materials 135

Chapter 5 Guided optical waves 141

5.1 Introduction to waveguiding 142
5.1.1 Solution to Maxwell's equations for isotropic planar waveguides 143
5.2 Modes in slab isotropic waveguides 144
5.2.1 Transverse electric modes in isotropic slab waveguides 144
5.2.2 TE modes in the symmetrical isotropic slab waveguide 145
5.2.3 TM modes in the symmetrical isotropic slab waveguide 150
5.2.4 Mode cut-off conditions for isotropic multimode symmetrical guides 153
5.2.5 TE modes in the asymmetric isotropic slab waveguide 154
5.2.6 TM modes in asymmetric isotropic slab waveguides 155
5.2.7 General classification of waveguide modes and waveguide field distributions 156
5.2.8 Normalized modes and orthogonality 156
5.2.9 Propagation in rectangular dielectric waveguides 157
5.3 Propagating modes in anisotropic slab waveguides 158
5.4 Propagation in optical fibers 161
5.4.1 The modal approach to propagation in an isotropic step index fiber 162
5.4.2 Modes in step index fiber when the wave is weakly confined 167
5.4.3 Modal dispersion in weakly guiding multimode fibers 168
5.4.4 Dispersion in single-mode weakly guiding fibers 169
5.4.5 The soliton in non-linear fibers 169
5.5 Birefringent fibers and polarization-maintaining fibers 171

Chapter 6 Coherent optical sources 175

6.1 Introduction to lasers 176
6.1.1 Stimulated and spontaneous emission 176

6.1.2 The gain of optical medium with inverted population 178
6.1.3 Methods of pumping to obtain population inversion 179
6.1.4 The Fabry-Perot cavity 179
6.1.5 Threshold population inversion for lasing 181
6.1.6 Lasing frequencies 181
6.1.7 The rate equations for the four-level laser 181
6.1.8 Homogeneous and inhomogeneous lasers 184
6.1.9 Comparison between three-level and four-level lasers 186
6.2 Examples of gas lasers 186
6.2.1 The HeNe laser 186
6.2.2 The CO_2 laser 188
6.2.3 The ion laser 190
6.3 Modes of laser operation 190
6.3.1 The Q-switched laser 190
6.3.2 The mode-locked laser 191
6.3.3 The single-mode laser 194
6.4 Examples of solid state lasers 196
6.4.1 The ruby laser 196
6.4.2 The Nd-YAG laser and the Nd-glass laser 197
6.4.3 The color center laser 198
6.5 Semiconductor diode lasers 200
6.5.1 The hetero-junction laser 201
6.5.2 The external cavity laser 204
6.5.3 The surface-emitting diode laser 205
6.6 Fiber lasers 207
6.6.1 The soliton laser 207
6.6.2 The erbium doped fiber amplifier (EDFA) 208
6.7 The free electron laser 208

Chapter 7 Optical detection 213

7.1 Methods of optical detection 214
7.1.1 Detectors that operate as direct energy converters 214
7.1.2 Hybrid detectors that operate as indirect energy converters 214
7.1.3 Detectors that operate as energy controllers rather than energy converters 215
7.2 Cathode emission photodetectors 216
7.2.1 Single-stage cathode emitters 216
7.2.2 The photomultiplier 218
7.3 The semiconductor photodiode 218
7.3.1 The pn junction photodetector 218
7.3.2 The Schottky barrier photodiode 222
7.3.3 The pin photodiode 223
7.3.4 The semiconductor avalanche detector 225
7.4 The operating wavelength and temporal response of photodetectors 225
7.4.1 The operational wavelengths of photodetectors 225
7.4.2 The temporal response of photodetectors 227
7.5 The noise performance of photodetectors 230
7.5.1 Thermal noise 230

7.5.2 Sources of noise in photodetectors 231
7.5.3 The noise performance of direct photodetectors 231
7.5.4 The noise performance of photodetectors in indirect detection modes 233

Chapter 8 Non-linear optics 237

8.1 Introduction 238
8.2 Material non-linearity second order in the optical electric field 238
8.3 Second harmonic polarization waves produced by optical waves passing through a non-linear optical material 239
8.3.1 Polarization waves for KDP and its isomorphs 241
8.4 Launching second harmonic electromagnetic waves 244
8.4.1 An extraordinary second harmonic wave launched by an ordinary fundamental wave in a KDP crystal 244
8.4.2 An ordinary second harmonic wave launched by a combination of an ordinary fundamental wave and an extraordinary fundamental wave in a KDP crystal 246
8.4.3 Second harmonic waves launched in materials for which χ_{323} is non-zero 247
8.5 Phase-matching the second harmonic generator 247
8.5.1 Temperature-matching 247
8.5.2 Angle-matching 248
8.6 Polarization waves for the parametric amplifier 250
8.7 Launching an electromagnetic wave at ω_3 due to inputs at ω_1 and ω_2 254
8.8 Phase-matching parametric amplifiers 255
8.8.1 Temperature-matching 255
8.8.2 Angle phase-matching 255
8.9 Degenerate four-wave mixing, using the Kerr effect 258
8.10 Phase conjugation produced by the photorefractive effect 260
8.11 Two-wave mixing using photorefractive materials 265
8.12 Phase-conjugate mirrors and their applications 266
8.12.1 The optical properties of the phase-conjugate mirror 266
8.12.2 Applications of phase-conjugate mirrors 267

Chapter 9 Coupled wave and other waveguide devices 273

9.1 Introduction to waveguide devices 274
9.1.1 Coupling between modes in slab waveguides 274
9.1.2 Devices based on coupling between modes in a single slab guide 274
9.1.3 Devices based upon coupling between modes in multiple slab guide structures 275
9.2 Coupled wave equations for multimode slab waveguide structures 276
9.2.1 The general form of the coupled wave equations for co-directional and contra-directional coupling between TE modes 276
9.2.2 The coupled wave equations for co-directional coupling in a symmetrical isotropic two-waveguide structure 277

9.2.3 Coupling between modes in a single corrugated isotropic slab waveguide 283
9.2.4 Slab waveguide devices based on interaction between acoustic and optical waves 286
9.2.5 Coupling between modes in a single anisotropic slab waveguide 288
9.3 Coupling between modes in channel guides 290
9.4 Specific examples of waveguide devices 290
9.4.1 Coupled wave directional couplers 291
9.4.2 Electro-optic coupled wave modulators 291
9.4.3 Interferometric electro-optic modulators 297
9.4.4 Traveling wave modulators 298
9.4.5 Mode conversion and control 301
9.4.6 Corrugated waveguide devices 305
9.4.7 Acousto-optic modulators, deflectors and switches 306
9.4.8 Waveguide amplifiers and frequency converters 308
9.4.9 Multiple quantum well materials and their application in waveguide devices 308
9.5 Integrated optics 310

Chapter 10 Optical sensors 313

10.1 Introduction to fiber sensors 314
10.2 Interferometry with and without the use of fibers 315
10.3 Sources of physical change to the transmission properties of intrinsic fiber sensors 317
10.4 Sources of physical change to the transmission properties of sensing elements incorporated in hybrid fiber sensors 319
10.5 Optical gyroscopes 320
10.5.1 The Sagnac effect 320
10.5.2 Non-fiber optical gyroscopes 323
10.5.3 The biasing and sensitivity of the ring laser gyroscope 325
10.5.4 The multi-oscillator ring laser gyroscope 326
10.5.5 Fiber gyroscopes 329
10.5.6 The phase-conjugate fiber gyroscope 330

Chapter 11 Optical computing and processing 333

11.1 Optical computing and optics in computing 334
11.2 The distinction between digital and non-digital computers and computing 334
11.3 Analog optical computing and analog optical processors 335
11.3.1 The optically addressed spatial light modulator (SLM) 335
11.3.2 The electrically addressed spatial light modulator 337
11.3.3 Matrix-vector multiplication, matrix-matrix multiplication, and other linear algebraic processes using optical systolic arrays 338
11.3.4 Fourier transform computation 344
11.3.5 Pattern recognition using a matched filter 345
11.3.6 Read-only memory 349

11.3.7 Page-oriented holographic memory (POHM) 349
11.3.8 Adaptable phase-conjugate three-dimensional memory 351
11.3.9 Optical neural networks 351
11.4 Digital computer architectures and their relevance to optical computing 358
11.4.1 Systolic array processing 359
11.4.2 Wavefront array processing 359
11.5 The use of optics in hybrid digital computers 360
11.5.1 The intra-chip, inter-chip and inter-subsystem communication problem 360
11.5.2 Clock distribution 361
11.5.3 Data communication at intra-chip, inter-chip and board-to-board level 361
11.5.4 Electro-optic and opto-electric transducers 364
11.5.5 Optically sampled analog-to-digital conversion 365
11.6 Optical digital computing 367
11.6.1 Optical bistability 367
11.6.2 Ultra-fast optical storage and optical logic elements 370

Appendix A Fourier transforms 373

Appendix B The optical propagator operator Ψ 377

Appendix C Tensor transformations 379

Appendix D Tensor components and crystal classes 385

Appendix E Diagonalizing second order tensors 391

Index 397
