Table of Contents

Chapter 1—Static Electric and Magnetic Fields in Vacuum 1

1.1 Static Charges 1
1.1.1 The Electrostatic Force 2
1.1.2 The Electric Field 4
1.1.3 Gauss' Law 6
1.1.4 The Electric Potential 10
1.2 Moving Charges 12
1.2.1 The Continuity Equation 12
1.2.2 Magnetic Forces 13
1.2.3 The Law of Biot and Savart 15
1.2.4 Ampère's Law 18
1.2.5 The Vector Potential 22
1.2.6 The Magnetic Scalar Potential 25
Exercises and Problems 29

Chapter 2—Charge and Current Distributions 31

2.1 Multipole Moments 31
2.1.1 The Cartesian Multipole Expansion 33
2.1.2 The Spherical Polar Multipole Expansion 38
2.2 Interactions with the Field 40
2.2.1 Electric Dipoles 40
2.2.2 Magnetic Dipoles 41
2.3 Potential Energy 43
Exercises and Problems 45

Chapter 3—Slowly Varying Fields in Vacuum 47

3.1 Magnetic Induction 47
3.3.1 Electromotive Force 47
3.1.2 Magnetically Induced Motional EMF 48
3.1.3 Time-Dependent Magnetic Fields 50
3.1.4 Faraday's Law 52
3.2 Displacement Current 52
3.3 Maxwell's Equations 55
3.4 The Potentials 56
3.4.1 The Lorentz Force and Canonical Momentum 57
3.4.2 Gauge Transformations 58

3.5 The Wave Equation in Vacuum 59
3.5.1 Plane Waves 60
★ 3.5.2 Spherical Waves 62
Exercises and Problems 64

Chapter 4—Energy and Momentum 67

4.1 Energy of a Charge Distribution 67
4.1.1 Stationary Charges 67
4.1.2 Coefficients of Potential 70
4.1.3 Forces on Charge Distributions in Terms of Energy . . . 73
4.1.4 Potential Energy of Currents 75
4.2 Poynting's Theorem 79
4.3 Momentum of the Fields 81
4.3.1 The Maxwell Stress Tensor 81
4.3.2 The Maxwell Stress Tensor and Momentum 84
4.4 Magnetic Monopoles 86
Exercises and Problems 90

Chapter 5—Static Potentials in Vacuum–Laplace's Equation 93

5.1 Laplace's Equation 93
5.1.1 Uniqueness Theorem 94
5.1.2 $\nabla^2 V = 0$ in One Dimension 95
5.2 $\nabla^2 V = 0$ in Two Dimensions 96
5.2.1 Cartesian Coordinates in Two Dimensions 96
5.2.2 Plane Polar Coordinates 98
5.2.3 Conformal Mappings 106
5.2.4 Capacitance 112
5.2.5 Numerical Solution 114
5.3 $\nabla^2 V = 0$ in Three Dimensions 115
5.3.1 Cylindrical Polar Coordinates 115
5.3.2 Spherical Polar Coordinates 119
★ 5.3.3 Oblate Ellipsoidal Coordinates 128
Exercises and Problems 132

Chapter 6—Static Potentials with Sources–Poisson's Equation 135

6.1 Poisson's Equation 135
6.2 Image Charges 136
6.2.1 The Infinite Conducting Plane 136
6.2.2 The Conducting Sphere 138
6.2.3 Conducting Cylinder and Image Line Charges 141
★ 6.3 Green's Functions 144
6.3.1 Green's Theorem 145
6.3.2 Poisson's Equation and Green's Functions 146

6.3.3 Expansion of Green's Functions in Spherical Polar Coordinates 147
Exercises and Problems 153

Chapter 7—Static Electromagnetic Fields in Matter . . . 155

7.1 The Electric Field Due to a Polarized Dielectric 155
7.1.1 Empirical Description of Dielectrics 158
7.1.2 Electric Displacement Field 159
7.2 Magnetic Induction Field Due to a Magnetized Material 160
7.2.1 Magnetic Field Intensity 164
7.3 Microscopic Properties of Matter 165
7.3.1 Polar Molecules (Langevin-Debye Formula) 165
7.3.2 Nonpolar Molecules 166
7.3.3 Dense Media—The Clausius-Mosotti Equation 167
7.3.4 Crystalline Solids 168
7.3.5 Simple Model of Paramagnetics and Diamagnetics 168
7.3.6 Conduction 170
7.4 Boundary Conditions for the Static Fields 171
7.5 Electrostatics and Magnetostatics in Linear Media 175
7.5.1 Electrostatics with Dielectrics Using Image Charges . . 179
7.5.2 Image Line Charges for the Dielectric Cylinder 181
7.5.3 Magnetostatics and Magnetic Poles 184
7.5.4 Magnetic Image Poles 188
7.6 Conduction in Homogeneous Matter 190
7.7 Magnetic Circuits 191
7.7.1 Magnetic Circuits Containing Permanent Magnets 193
7.7.2 The Hysteresis Curve of a Ferromagnet 194
Exercises and Problems 197

Chapter 8—Time-Dependent Electromagnetic Fields in Matter 201

8.1 Maxwell's Equations 201
8.1.1 Energy in the Fields 203
8.1.2 Momentum and the Maxwell Stress Tensor 205
8.1.3 Blackbody Radiation Pressure 206
8.2 The Electromagnetic Potentials 208
8.3 Plane Waves in Material Media 209
8.3.1 Plane Waves in Linear, Isotropic Dielectrics 210
8.3.2 Reflection and Refraction—Snell's Law 211
8.3.3 Fresnel's Equations 212
8.3.4 The Evanescent Wave 216
8.3.5 Plane Waves in a Tenuous Plasma 217
★ 8.3.6 Plane Waves in Linear Anisotropic Dielectrics 218
8.3.7 Plane Waves in Isotropic, Linear Conducting Matter . . 222
8.3.8 Simple Model for the Frequency Dependence of ε 225
8.3.9 Simple Model of a Conductor in an Oscillating Field . . 226

8.4 Boundary Conditions for Oscillating Fields 227
8.4.1 Special Cases 228
Exercises and Problems 231

Chapter 9—Wavequide Propagation—Bounded Waves . 233

9.1 Bounded Waves 233
9.1.1 TE Modes in a Rectangular Waveguide 233
9.2 Cylindrical Waveguides 236
9.2.1 Circular Cylindrical Waveguides 240
9.2.2 Resonant Cavities 242
9.2.3 Dissipation by Eddy Currents 244
9.3 Dielectric Waveguides (Optical Fibers) 248
★ 9.3.1 HE Modes 251
Exercises and Problems 256

Chapter 10—Electromagnetic Radiation 259

10.1 The inhomogeneous Wave Equation 259
10.1.1 Solution by Fourier Analysis 260
★ 10.1.2 Green's Function for the Inhomogeneous Wave Equation 263
10.2 Radiation from a Localized Oscillating Source 264
10.2.1 Electric Dipole Radiation 266
10.2.2 Magnetic Dipole and Electric Quadrupole Radiation . . 270
★ 10.2.3 Radiation by Higher Order Moments 275
★ 10.2.4 Energy and Angular Momentum of the Multipole Fields 279
10.2.5 Radiation from Extended Sources 281
10.3 The Liénard-Wiechert Potentials 283
★ 10.3.1 The Liénard-Wiechert Potentials Using Green's Functions 285
10.3.2 The Fields of a Moving Point Charge 286
10.3.3 Radiation from Slowly Moving Charges 287
10.3.4 Thomson Scattering 288
10.3.5 Radiation by Relativistic Charges 289
10.3.6 Synchrotron Radiation 292
10.3.7 Differentiating the Potentials 294
Exercises and Problems 299

Chapter 11—The Covariant Formulation 301

11.0 Covariance 301
11.1 The Four-Potential and Coulomb's Law 302
11.2 The Electromagnetic Field Tensor 303
11.2.1 Magnetization and Polarization 305
11.3 Invariants 307
11.4 The Stress-Energy-Momentum Tensor 308
11.5 Radiation from Relativistic Particles 313
Exercises and Problems 316

Chapter 12—Radiation Reaction—Electrodynamics . . . 317

12.1 Electromagnetic Inertia . . . 317
12.2 The Reaction Force Needed to Conserve Energy . . . 319
12.3 Direct Calculation of Radiation Reaction: The Abraham-Lorentz Model . . . 321
12.4 The Equation of Motion . . . 324
12.5 The Covariant Equation of Motion . . . 325
12.6 Alternative Formulations . . . 327
Exercises and Problems . . . 329

Appendix A—Other Systems of Units . . . 331

A.1 ESU and EMU Systems . . . 332
A.2 Gaussian Units . . . 333

Appendix—B Vectors and Tensors . . . 337

B.1 Vectors . . . 337
B.1.1 Bases and Transformations . . . 338
B.1.2 Transformation of Basis Vectors . . . 339
B.1.3 Scalar and Vector Products . . . 340
B.1.4 Reciprocal Bases . . . 340
B.1.5 The Summation Convention . . . 341
B.1.6 Covariant and Contravariant Components of a Vector . 342
B.1.7 The Metric Tensor . . . 342
B.2 Tensors . . . 343
B.2.1 Zero-Rank Tensors (Scalars) . . . 344
B.2.2 First-Rank Tensors . . . 345
B.2.3 Second-Rank Tensors . . . 346
B.2.4 Differentiation of Tensors . . . 347
B.2.5 Pseudotensors . . . 348
B.3 Vector Identities . . . 349
B.4 Curvilinear Coordinates . . . 351
B.4.1 Bases and Coordinate Axes . . . 351
B.4.2 Differentiation of Tensors in Curvilinear Coordinates . 353
B.4.3 Differential Operators . . . 355
B.5 Four-Tensors in Special Relativity . . . 360

Appendix C—The Dirac δ Function . . . 363

Appendix D—Bessel Functions . . . 367

Appendix E—Legendre Polynomials and Spherical Harmonics . . . 373

Appendix F—Table of Symbols . . . 377

Index . . . 379
