Contents

List of theorems xi
List of algorithms xii
List of tables xiii
List of figures xiv
Selective glossary of abbreviations and symbols xxi

1 Introduction **1**
1.1 Background 1
1.2 Applications 4
1.3 Structure of the monograph 6
1.4 Contribution 7

2 Prediction and control over the semi-infinite plane **9**
2.1 The two-dimensional control problem 9
2.2 Some results from two-dimensional systems theory 11
2.2.1 Transforming from quarter-plane to non-symmetric half-plane causal processes 12
2.2.2 Zeros and coprimeness 13
2.2.3 Stability 14
2.2.4 Autocovariance of an ARMA process 15
2.2.5 The solution of two-dimensional Diophantine equations 17
2.3 Pole-assignment control 19
2.4 Prediction 21
2.4.1 The two-dimensional prediction problem 21
2.4.2 A closed form for the least squares predictor 25
2.4.3 An algebraic interpretation 26
2.5 Minimum variance and generalised minimum variance control 28
2.5.1 Minimum variance control 28

2.5.2 Generalised minimum variance control 30

3 Prediction and control over the plane of finite width 32

3.1 Prediction and control for case with edges 32

3.1.1 The process 32

3.1.2 Prediction and minimum variance control 34

3.1.3 The relationship with the case with no edges 37

3.1.4 Generalised minimum variance control 39

3.2 Simulations 40

3.3 The Multivariable Connection 43

3.3.1 The process 43

3.3.2 Prediction 47

3.3.3 Minimum variance control 50

3.3.4 Generalised minimum variance control 51

3.3.5 The link with the case without edges 54

3.3.6 Reprise 56

3.3.7 Other models for behaviour at the edges 59

3.4 Other causality structures 61

3.4.1 The process 61

3.4.2 Model responses to step inputs 63

3.4.3 Control—an informal approach 70

3.4.4 A simulation example 74

3.4.5 Control—a more formal approach 75

4 Parameter estimation 83

4.1 Least squares estimation in two dimensions 83

4.1.1 AR processes 83

4.1.2 The extension to ARMA data 87

4.2 Forgetting strategies 88

4.3 Two-dimensional forgetting with $0 < \lambda < 1$ 92

4.3.1 An 'Attasi's model' form for two-dimensional forgetting 92

4.3.2 A 'Roesser's model' form for two-dimensional forgetting 96

4.4 Two-dimensional forgetting in factored form 102

4.5 Row and column forgetting 110

4.5.1 Row forgetting 110

4.5.2 Column forgetting—the basic algorithm 112
4.5.3 Column forgetting—modifications 113
4.6 Simulations 116

5 Self-tuning control **136**
5.1 Self-tuning GMV in two dimensions 137
5.1.1 An explicit self-tuning controller 137
5.1.2 Implicit self-tuning control 144
5.1.3 Self-tuning control for different edge conditions 146
5.2 Setpoint tracking 149
5.2.1 Tracking without edges 149
5.2.2 Tracking column by column 151
5.2.3 Integral control 153
5.3 Offset handling 158
5.3.1 The incremental model 159
5.3.2 The static model 162

Conclusion **170**

Appendix 1. Proof of the theorems **174**

Appendix 2. Algorithm 2.4.1 **198**

Appendix 3. Multivariable self-tuning control **201**
A3.1 The process 201
A3.2 Prediction 201
A3.3 Minimum variance control 202
A3.4 Generalised minimum variance control 202

Appendix 4. Simulation results for §4.6 **204**
