CONTENTS

CHAPTER 1. GENERAL INTRODUCTION

B. Imelik and J. C. Vedrine

1.1. Introduction	1
1.2. General Presentation of the Physical Techniques	6
1.3. Units and Conversions	10

CHAPTER 2. INFRARED SPECTROSCOPY

G. Coudurier and F. Lefebvre

2.1. Fundamentals	11
2.1.1. Origin of the Spectrum	11
2.1.2. States of Vibrational Energy	12
2.1.3. Vibrations Active in IR	12
2.1.4. Molecular Symmetry	14
2.1.5. Calculation of the Vibration Frequencies	14
2.1.6. Types of Vibrations	16
2.1.7. Group Frequencies	16
2.1.8. Relation between the Absorbed Intensity and Concentration	17
2.2. Experimental Considerations	18
2.2.1. Introduction	18
2.2.2. Transmission Spectroscopy	19
2.2.3. Reflection Spectroscopy	21
2.2.4. Emission Spectroscopy	24
2.2.5. Photoacoustic and Deflection Spectroscopies	25
2.3. Examples of the Use of IR Spectroscopy in Heterogeneous Catalysis	26
2.3.1. Catalyst Structure	26
2.3.2. Study of the Surface Properties of Catalysts	29
2.3.3. Quantitative and Qualitative Studies of Adsorption	35
2.3.4. Detection of Reaction Intermediates	38
2.4. Conclusions	43
References	43

CHAPTER 3. RAMAN SPECTROSCOPY

E. Garbowski and G. Coudurier

3.1. Introduction	45
3.2. Theory of Raman Diffusion	45
3.2.1. Quantum Mechanical Theory	46
3.2.2. Classical Theory	46
3.2.3. Selection Rules and Intensity	47
3.3. Experimental Considerations	48
3.3.1. Source	48
3.3.2. Monochromator	49
3.3.3. Detectors	49
3.3.4. Cell and Sample	49
3.4. Application of Raman Spectroscopy to Catalysis	50
3.4.1. Catalyst Structure	50
3.4.2. Superficial Properties of a Catalyst	53
3.4.3. Characterization of Metallic Catalysts	54
3.4.4. Adsorbed Molecules and Catalysis	55
3.5. New Developments	57
3.5.1. Raman Resonance Spectroscopy	57
3.5.2. Coherent Anti-Stokes Raman Spectroscopy	58
3.5.3. Fourier Transform Raman Spectroscopy	59
3.5.4. The Future of Raman Spectroscopy in Catalysis	59
References	60

CHAPTER 4. ELECTRONIC SPECTROSCOPY

E. Garbowski and H. Praliaud

4.1. Introduction	61
4.2. Principles and Apparatus	61
4.2.1. Principles	61
4.2.2. Apparatus	62
4.2.3. Nature of Electronic Transitions: Energy and Intensity	64
4.3. Application to Catalysis	66
4.3.1. Nickel Ions in Zeolites: Coordination State and Reduction	69
4.3.2. Valence State and Coordination Number of Molybdenum Ions on Various Supports, Changes during the Oxidation of Propylene, and Their Influence on Selectivity	73
4.3.3. Study of Molecules Adsorbed on Zeolites	75
Appendix I. The $d-d$ Transitions: Crystal Field Theory (Electrostatic Model)	81
Appendix II. The π -Electron System	85
References	88

CHAPTER 5. NUCLEAR MAGNETIC RESONANCE IN HETEROGENEOUS CATALYSIS

Y. Ben Taarit and J. Fraissard

5.1. Introduction to the Principles and Practice of Magnetic Resonance	91
5.1.1. Introduction	91
5.1.2. Zeeman Splitting	92
5.1.3. Relaxation, Saturation, and the Bloch Equations	94
5.2. Fundamental Parameters in NMR	95
5.2.1. The Screening Tensor	95
5.2.2. Dipolar Interactions	97
5.2.3. The Fermi Interaction	98
5.2.4. <i>J</i> Coupling	99
5.3. Applications in Catalysis	99
5.3.1. Relaxation	99
5.3.2. Chemical Shift	101
5.3.3. Equilibrium between Chemisorbed and Physisorbed Molecules	103
5.3.4. Narrowing via Magic Angle Spinning	104
5.3.5. Multiple-Pulse Sequences	106
5.4. Examples in Catalysis	106
5.4.1. Studies of Acid–Base Interactions at Solid Surfaces via Conventional ^1H NMR	106
5.4.2. Brønsted Acidity	108
5.5. Catalysts and Chemisorption Studies via MAS–NMR	108
5.5.1. Catalyst Structural Characterization via Multinuclear NMR	109
5.5.2. Catalyst Structural Characterization via NMR of ^{139}Xe as a Probe Molecule	115
5.5.3. NMR of Probe Molecules for Acidity Determinations	121
5.6. NMR Studies of Metals	123
5.6.1. The Knight Shift	123
5.6.2. ^{195}Pt NMR of Platinum Catalysts	124
5.7. Conclusions	128
References	128

CHAPTER 6. ELECTRON PARAMAGNETIC RESONANCE: PRINCIPLES AND APPLICATIONS TO CATALYSIS

M. Che and E. Giamello

6.1. Introduction	131
6.2. Electron Paramagnetic Resonance Principle	132
6.2.1. The Electron Magnetic Moment	132
6.2.2. The Zeeman Effect	132
6.2.3. The Resonance Phenomenon	133

6.3. Schematic Description of an EPR Spectrometer	135
6.4. Interactions between the Odd Electron and Its Surrounding Medium	137
6.4.1. The g Factor	137
6.4.2. The Hyperfine Structure	149
6.4.3. The Superhyperfine Structure	161
6.5. Applications of EPR in Catalysis	162
6.5.1. Redox Properties of Surfaces	162
6.5.2. Identification of Active Sites in Catalysis	166
6.5.3. Identification of Intermediates in Catalysis	168
6.5.4. Coordination Chemistry and Catalytic Properties of Supported Ni^+ Ions	170
6.5.5. Oxidative Coupling of Methane	175
6.6. Conclusions	176
References	177

CHAPTER 7. FERROMAGNETIC RESONANCE

L. Bonneviot and D. Olivier

7.1. Introduction	181
7.2. Background	182
7.2.1. Theoretical Principles	182
7.2.2. Experimental FMR Data	185
7.3. Thermomagnetic Curves	186
7.3.1. Superparamagnetism and Particle Size	186
7.3.2. FMR of Superparamagnetic Particles	187
7.3.3. Experimental Parameters	189
7.3.4. Data Analysis	190
7.4. Magnetic Anisotropies	196
7.4.1. Powder Pattern and Lineshape	196
7.4.2. Shape Anisotropy	199
7.4.3. Magnetostriction Anisotropy	202
7.4.4. Magnetocrystalline Anisotropy	207
7.4.5. Relative Intensity of the Various Anisotropies	209
7.5. Conclusion	210
Glossary	211
References	213

CHAPTER 8. MÖSSBAUER SPECTROSCOPY — NUCLEAR GAMMA RESONANCE

P. B. Bussière

8.1. Introduction	215
8.2. The f Factor and Resonant Absorption	217

8.2.1. Elements of the Theory	217
8.2.2. Particular Cases	219
8.2.3. Resonant Absorption (Nonresonant Absorption Negligible)	219
8.2.4. Applications	220
8.3. Experimental Techniques	221
8.3.1. The Mössbauer Elements and the Sources	221
8.3.2. The Samples	221
8.3.3. The Cells	222
8.3.4. The Spectrometer	223
8.3.5. Calibration	224
8.3.6. Computer Calculations	224
8.3.7. Performance	224
8.3.8. Radioprotection	225
8.4. The Isomer Shift and the Second-Order Doppler Shift	225
8.4.1. Elements of the Theory	225
8.4.2. Applications	227
8.5. Electric Quadrupole Interaction Energy and Quadrupole Splitting	227
8.5.1. Elements of the Theory	227
8.5.2. Applications	230
8.6. Magnetic Interactions	232
8.6.1. Elements of the Theory	232
8.6.2. Applications	234
8.7. Further Techniques	237
8.7.1. Emission Mössbauer Spectroscopy	237
8.7.2. A Mössbauer Element Used as a Probe	238
8.7.3. Conversion Electron Mössbauer Spectroscopy, CEMS	239
8.8. A Survey of Applications to Heterogeneous Catalysis	240
8.8.1. Explaining Catalytic Properties from Characterization of the Components of Catalysts	240
8.8.2. Chemisorption	242
8.8.3. Study of Catalysts during Reaction	244
8.9. Conclusions	244
References	245

CHAPTER 9. AUGER ELECTRON SPECTROSCOPY

J. C. Bertolini and J. Massardier

9.1. The Auger Process	247
9.1.1. Auger Electron Energies	248
9.1.2. Auger Line Shapes	249
9.1.3. Auger Line Intensities	249
9.1.4. Angular Effects	251
9.2. Experimental Considerations	252
9.2.1. Retarding Field Analyzers	252

9.2.2. Speed Selector Analyzers	253
9.2.3. Frequency Modulation and Synchronous Detection	254
9.3. Applications in Catalysis	255
9.3.1. Bimetallic Alloys and Surface Segregation	256
9.3.2. Depth Profiling	259
9.3.3. Surface Analysis of Oxides	261
9.3.4. Adsorbates and Deposits	263
9.3.5. Chemical Shifts and Line Shapes in AES	264
9.4. Imaging in AES	267
9.5. Limitations on the Use of AES	267
Appendix	268
References	269

CHAPTER 10. VIBRATIONAL ELECTRON ENERGY LOSS SPECTROSCOPY

J. C. Bertolini

10.1. Introduction	271
10.2. Electron-Vibration Interactions	272
10.2.1. Long-Range Dipolar Interactions	273
10.2.2. Short-Range Interactions	275
10.3. Experimental Considerations	276
10.4. Some Examples of Interest	277
10.4.1. Adsorbates on Metal Single Crystals	278
10.4.2. Adsorption on Supported Metals	284
10.4.3. Prominence of Surface Phonons of Solid Materials	285
10.5. Comparison with Other Methods: Conclusions	288
References	288

CHAPTER 11. SECONDARY ION MASS SPECTROMETRY

J. Grimblot and M. Abon

11.1. Introduction	291
11.2. Theoretical and Practical Aspects	292
11.2.1. The Ion-Solid Collision: The Sputtering Process	292
11.2.2. Preferential Sputtering	295
11.2.3. The Ionic Yield and the Ionization Coefficient	298
11.2.4. Experimental Basis of SIMS	301
11.2.5. Static SIMS	304
11.3. Applications	307
11.3.1. Metals and Alloys	307
11.3.2. Adsorption Studies	311

11.3.3. Oxide Catalysts	313
11.3.4. Supported Catalysts	315
11.4. Conclusions	316
References	317

CHAPTER 12. ION SCATTERING SPECTROSCOPY

J. Grimblot and M. Abon

12.1. Introduction	321
12.2. Theoretical and Practical Aspects	322
12.2.1. Mechanics of a Binary Collision	322
12.2.2. Scattered Ion Yield	327
12.2.3. Experimental Considerations	335
12.3. Applications	336
12.3.1. Atom and Molecule Desorption Induced by Low-Energy Ions	336
12.3.2. Analysis of Practical Catalysts by ISS	337
12.4. Conclusions	344
References	345

CHAPTER 13. APPLICATIONS OF NEUTRON SCATTERING TO CATALYSIS

H. Jobic

13.1. Introduction	347
13.2. Introduction to the Theory	347
13.2.1. Properties of Neutrons	347
13.2.2. Scattering Cross Sections	348
13.2.3. Coherent and Incoherent Scattering	349
13.3. Experimental Techniques	350
13.3.1. Beryllium Filter Detector Spectrometer INFB	351
13.3.2. Time-of-Flight Spectrometer IN6	352
13.3.3. Small-Angle Scattering	353
13.3.4. Two-Axis Powder Spectrometers	354
13.4. Neutron Diffraction	355
13.5. Vibrational Spectroscopy	357
13.5.1. Calculation of the Differential Cross Section Corresponding to the Vibrational Motions	357
13.5.2. Application of NIS to Adsorbed Species	360
13.6. Quasi-Elastic Scattering Study of Diffusive Motions	367
13.6.1. Translational Motion	368
13.6.2. Rotational Motion	369

13.6.3. Applications of Quasi-Elastic Neutron Scattering (QENS) to the Study of Molecules Adsorbed in Zeolites	370
13.7. Conclusions	373
References	373

CHAPTER 14. X-RAY ABSORPTION SPECTROSCOPY: EXAFS AND XANES

B. Moraweck

14.1. Historical Survey	377
14.2. Theoretical Considerations	378
14.3. Practical Considerations	382
14.3.1. Experimental Arrangements	382
14.3.2. Determination of Parameters	383
14.3.3. The Phase Shift Problem	384
14.4. Selected Catalytic Systems	386
14.4.1. Hydrodesulfurization Catalysts	386
14.4.2. Supported Oxides	393
14.4.3. Monometallic Catalysts	398
14.4.4. Platinum-Based Catalysts	402
14.5. Absorption Resonance Studies: White Lines	405
14.5.1. Introduction	405
14.5.2. Theoretical Summary	405
14.5.3. Monometallic Catalysts	406
14.5.4. Bimetallic Catalysts	406
14.6. An Example of Chemistry of the Solid State: Preparation and Characterization of a Pd–Cr/SiO ₂ Catalyst	407
14.6.1. Preparation and Characterization of the Precursor	407
14.6.2. Preparation and Characterization of the Catalysts	408
14.7. Conclusions	413
References	414

CHAPTER 15. DETERMINATION OF THE ATOMIC STRUCTURE OF SOLID CATALYSTS BY X-RAY DIFFRACTION

G. Bergeret and P. Gallezot

15.1. Introduction	417
15.2. Crystal Structure of Zeolites	418
15.2.1. Methods of Structure Determination	419
15.2.2. Structure of the Zeolite Framework	421
15.2.3. Lattice Defects and Restructuring of the Zeolite Framework	421

15.2.4. Localization of Cations in Zeolites	422
15.2.5. Position of the Adsorbed Molecules	425
15.2.6. Position of Metallic Atoms	427
15.3. Structure of Amorphous Catalysts and Very Small Particles	429
15.3.1. Radial Electron Distribution	430
15.3.2. Applications of the Radial Distribution	435
15.4. Conclusions	441
References	442

CHAPTER 16. SMALL-ANGLE X-RAY SCATTERING

A. J. Renouprez

16.1. Introduction	445
16.2. Basic Theory	445
16.2.1. Scattering Cross Section of a Volume of Matter	445
16.2.2. The Scattering Laws	447
16.3. Determination of the Structure of Materials from Small-Angle X-Ray Scattering	450
16.3.1. The Specific Area	450
16.3.2. The Radius of Gyration: Guinier's Law	451
16.3.3. Porosity	452
16.3.4. The Particle Size Distribution	452
16.3.5. Application to Solid State Materials	453
16.3.6. Neutron Small-Angle Scattering	454
16.4. Experimental Setup	454
16.4.1. Laboratory Instruments	455
16.4.2. Synchrotron Radiation Instruments	457
16.5. The Applications of Small-Angle Scattering	458
16.5.1. Porous and Finely Divided Solids	458
16.5.2. Supported Metallic Catalysis	461
16.6. Small-Angle Neutron Scattering	464
References	465

CHAPTER 17. PHOTOELECTRON SPECTROSCOPIES: XPS AND UPS

J. C. Vadrine

17.1. Introduction	467
17.2. Experimental Apparatus	468
17.2.1. Spectrometer	468
17.2.2. Preparation of the Samples	470

17.3. XPS Parameters and Basic Features	470
17.3.1. Chemical Features	470
17.3.2. Peak Intensity and Semiquantitative Features	477
17.4. Applications in Catalysis	483
17.4.1. Surface Enrichment in Heterogeneous Catalysis	483
17.4.2. Active Phase-Support Interactions	489
17.4.3. Bimetallic Catalysts	492
17.4.4. Organometallic Complexes	492
17.4.5. Adsorbed Species	493
17.5. UPS and Applications	493
17.6. Conclusions	494
References	494

CHAPTER 18. PHOTOELECTRON DIFFRACTION AND SURFACE CRYSTALLOGRAPHY

Y. Jugnet

18.1. Introduction	497
18.2. Angular Photoemission Geometry	498
18.3. Surface Sensitivity	499
18.4. Photoelectron Diffraction	500
18.5. Applications	503
18.6. Conclusions	506
References	507

CHAPTER 19. CHARACTERIZATION OF CATALYSTS BY CONVENTIONAL AND ANALYTICAL ELECTRON MICROSCOPY

P. Gallezot and C. Leclercq

19.1. Introduction	509
19.2. Conventional and Analytical Microscopes	510
19.2.1. Electron Interactions with Atoms	510
19.2.2. The High-Resolution Transmission Microscope	513
19.2.3. The Scanning Transmission Electron Microscope	516
19.2.4. Analytical Tools Associated with the STEM	518
19.3. Application of Electron Microscopy to the Study of Heterogeneous Catalysts	521
19.3.1. Introduction	521
19.3.2. Preparation of Samples for TEM Examination	522
19.3.3. Morphology and Structure of Catalysts	526
19.3.4. Composition of Catalysts	550
References	557

CHAPTER 20. APPLICATIONS OF ELECTRICAL CONDUCTIVITY MEASUREMENTS IN HETEROGENEOUS CATALYSTS

J.-M. Herrmann

20.1. Introduction	559
20.2. Theory and Definitions	559
20.2.1. Electrical Conductivity of Powder Catalysts	560
20.2.2. Definitions	561
20.2.3. Apparatus	561
20.3. Structure Defects in Pure Oxide Catalysts	562
20.3.1. The <i>n</i> -Type Semiconductors	562
20.3.2. The <i>p</i> -Type Semiconductors	565
20.4. Electronic Structure of Doped Oxides	566
20.4.1. Valence Induction	566
20.4.2. Consequence for Catalysis	568
20.5. Structure of Mixed Oxides: Case Study of Sn-Sb-O	568
20.5.1. Electrical Conductivity of Homogeneous Solids Calcined at 500 °C	568
20.5.2. Catalytic Properties of Sn-Sb Mixed Oxides	570
20.5.3. Influence of Calcination of 950 °C	571
20.5.4. Structural Study of Ternary Fe-Sn-Sb Oxides	571
20.6. Structural Study of Catalysts by Temperature Programmed Conductivity	572
20.7. Determination of Reaction Mechanisms and Identification of Charged Active Intermediates by <i>in Situ</i> Conductivity Measurements during Catalysis	573
20.7.1. Oxidation of CO on TiO ₂	573
20.7.2. Photocatalytic Oxidation of Isobutane on TiO ₂	576
20.8. Supported Metal Catalysts	579
20.8.1. Evidence for Hydrogen Spillover	579
20.8.2. Electronic Origin of Strong Metal-Support Interactions	581
20.9. General Conclusions	583
References	584

CHAPTER 21. MAGNETIC MEASUREMENTS AND CATALYSIS

J.-A. Dalmon

21.1. Introduction	585
21.2. Different Magnetic States	585
21.2.1. Paramagnetism	586
21.2.2. Ferromagnetism and Superparamagnetism	587
21.3. Short Description of Experimental Methods	590
21.3.1. Static Methods	590
21.3.2. Dynamic Methods	590

21.4. Magnetic Characterization of Catalysts	590
21.4.1. Nonmetallic Species	590
21.4.2. Metallic Species	592
21.5. Study of Adsorbed Phases and Their Relation to Catalysis	597
21.5.1. Surface and Magnetism	597
21.5.2. Study of Adsorbed Species	598
21.5.3. Interpretation of the Magnetic Effects	602
21.5.4. Relation to Catalysis	604
Appendix	605
References	607

CHAPTER 22. THERMAL METHODS: CALORIMETRY, DIFFERENTIAL THERMAL ANALYSIS, AND THERMOGRAVIMETRY

A. Auroux

22.1. Introduction	611
22.2. Calorimetry	611
22.2.1. Introduction	611
22.2.2. Principles of Calorimetry	612
22.2.3. Use of Calorimeters	619
22.2.4. Applications: Data Processing	624
22.3. Differential Thermal Analysis	636
22.3.1. Introduction	636
22.3.2. Principles	636
22.4. Thermogravimetric Analysis	638
22.4.1. Introduction	638
22.4.2. Principles and Use	638
22.4.3. Applications of Thermogravimetry and Associated Techniques	642
22.5. Conclusion	645
References	645

CHAPTER 23. MASS SPECTROMETRY: PRINCIPLES AND APPLICATIONS IN CATALYSIS

C. Mirodatos

23.1. Basic Principles and Systems of Mass Spectrometry	651
23.1.1. Ion Sources	652
23.1.2. Analyzers	653
23.1.3. Detectors	656

23.2. Nature and Treatment of Data	656
23.2.1. Analysis of a Multicomponent Gas Mixture	657
23.2.2. Analysis of a Mixture of Stable Isotopes	657
23.3. Selected Applications in Catalysis	661
23.3.1. Homogeneous and Surface Organometallic Catalysis	661
23.3.2. Adsorption/Desorption Processes on Solid Surfaces	661
23.3.3. Exchange Reactions	664
23.4. Conclusion	673
References	674

CHAPTER 24. SCANNING TUNNELING AND ATOMIC FORCE MICROSCOPIES

P. Gallezot

24.1. Introduction	675
24.2. Design and Principles of Scanning Probe Microscopes	676
24.2.1. Scanning Tunneling Microscope (STM)	676
24.2.2. Atomic Force Microscope (AFM)	677
24.2.3. Other Scanned-Probe Microscopes	679
24.3. Application of STM to Surface Chemistry	679
24.3.1. Arrangements of Atoms on Surfaces	680
24.3.2. Topography of Surfaces	680
24.3.3. Image of Supported Clusters	681
24.3.4. Image of Organic Adsorbates	684
24.4. Conclusion	686
References	686

CHAPTER 25. FINAL REMARKS

B. Imelik and J. C. Vedrine

25.1. Introduction	689
25.2. Examples	690
25.2.1. Platinum/Y-Zeolite	690
25.2.2. Antimony/Tin Mixed Oxides	692
25.3. General Conclusion	693

INDEX	695
