I. POLYMERS

1. Introduction to Polymeric Structure and Polymers 3

A. Keller

1.1. Classification	3
1.1.1. Linear Chains and Networks	3
1.1.2. Periodic and Aperiodic Polymers	5
1.1.3. Homopolymers and Copolymers	7
1.1.4. Single-Component Polymers	8
1.2. Main Types of Polymerization Reaction	10
1.2.1. Condensation Polymerization	10
1.2.2. Addition Polymerization	11
1.3. Imperfection Types in a Linear Homopolymer Chain	12
1.3.1. End Groups	12
1.3.2. Molecular Length (Weight) Distribution	13
1.3.3. Isomerism	14
1.4. Formulas of Some Important Polymers	18
1.4.1. Condensation Polymers	19
1.4.2. Addition Polymers	20
1.5. Melting Range of Polymers; Specialty Materials	23
1.5.1. Conventional Polymers	23
1.5.2. Specialty Materials	24
1.6. The Physical State	26
1.6.1. Resumé of the Amorphous State	27
1.6.2. The Usefulness of Polymers in Terms of Their Physical State	30

2. Crystallinity and Kinetics of Crystallization	33
<i>A. Keller</i>	
2.1. Basic Classifications	33
2.1.1. Generalities	33
2.1.2. Sources of Lattice Imperfections in Polymers	36
2.1.3. Modes of Crystallization	37
2.2. Crystal Structure	38
2.2.1. The Unit Cell	38
2.2.2. Chain Conformations	39
2.2.3. Chain Packing	43
2.2.4. Crystal Structure Determination	47
2.3. Degree of Crystallinity	49
2.3.1. The Principle of the Determination	49
2.3.2. Methods of Determination	50
2.3.3. An Appreciation of the Different Methods	51
2.4. Kinetics of Crystallization	52
2.4.1. Rates of Crystallization	52
2.4.2. The χ_c vs t Curves	54
2.4.3. Morphological vs True Crystallinity	55
2.4.4. Primary and Secondary Crystallization	56
2.4.5. Textures	57
2.4.6. Analytical Treatment of Crystallization Kinetics	59
2.5. Spherulites	62
2.5.1. Optical Properties of Spherulites	64
2.5.2. Morphology of Spherulites	66
2.5.3. The Fine Structure of Spherulites	68
 3. The Basic Crystal Unit	 71
<i>A. Keller</i>	
3.1. Single-Crystal Lamella	71
3.1.1. Discovery and Description	71
3.1.2. The Chain-Folding Model	74
3.1.3. Fold Length l	75
3.2. Theories of Chain Folding	81
3.2.1. Framework of the Kinetic Theories	81
3.2.2. Further Developments and Problems	88
3.2.3. Growth Rates	91
3.2.4. Melting Behavior as a Function of l	92
3.2.5. Comparison of Crystallization from Solution and Melt	93
3.2.6. Some New Perspectives in Crystallization Theories	95

3.3.	Morphology of Chain-Folded Crystals	97
3.3.1.	Monolayer Crystals	97
3.3.2.	Multilayer Crystals	99
3.4.	Fold Structure — Nature of Amorphous Material	105
3.4.1.	The Issues	105
3.4.2.	Experimentation in Aid of the Fold-Surface Problem	107
3.4.3.	Outcome of the Enquiries	108
3.5.	Neutron Scattering Experiments: The Chain Trajectory	109
3.5.1.	Technique and Potential	109
3.5.2.	Angular Ranges	110
3.5.3.	Some Results	111
3.6.	Alternative Morphologies	112
3.6.1.	Extended-Chain-Type Crystals	112
3.6.2.	Micellar Crystals (Crystal Gels)	114
4.	Other Classes of Crystallization	117
	<i>A. Keller</i>	
4.1.	Crystallization Concurrent with Polymerization (Nascent Polymers)	117
4.2.	Orientation-Induced Crystallization	119
4.2.1.	General	119
4.2.2.	Morphological Background	120
4.2.3.	Mode of Chain Extension	121
4.2.4.	Structure of Shish-Kebabs	124
4.2.5.	Properties of Shish-Kebabs	126
4.2.6.	Some Practical Consequences	127
5.	Hierarchical Nature of Macromolecular Structure	131
	<i>A. Keller</i>	
5.1.	Introduction	131
5.1.1.	Crystalline Constituents	131
5.1.2.	Amorphous Constituents	132
5.2.	Crystal Defects	132
5.2.1.	Defects Within the Crystal Lattice	132
5.2.2.	Defects Beyond the Level of the Lattice	133
5.3.	Thermal Behavior	134
5.3.1.	Amorphous Material	134
5.3.2.	Crystal Lattice	135
5.3.3.	Melting Range	135
5.4.	Deformation	137
5.4.1.	Polymers as Self-Structured Composites	137

6. Influence of Processing on Polymeric Materials	143
<i>G. Marrucci</i>	
6.1. Polymeric Processing	144
6.2. General Comments on Influence of Flow	148
6.3. Dumbbell Model	150
6.3.1. Shear Flow	154
6.3.2. Elongational Flow	155
6.3.3. Other Flows	157
6.4. Multiplicity of Friction Points: Rouse-Zimm Model	158
6.5. Concentrated Systems	162
6.6. Effects of Flow on Crystallization	170
6.7. Recent Developments	174
References and Bibliography for Part I	175

II. LIQUID CRYSTALS

7. Structural Classification of Thermotropic Liquid Crystals . 181

S. Chandrasekhar

7.1. Introduction	181
7.2. Rod-Like Molecules	182
7.2.1. Effect of Pressure on Polymorphism	184
7.2.2. The Reentrant Phenomenon	184
7.3. Disk-Like Molecules	187

8. Nematic Liquid Crystals 189

S. Chandrasekhar

8.1. Elastic Properties	189
8.1.1. Basic Equations	189
8.1.2. Determination of the Elastic Constants: The Freedericksz Effect	190
8.1.3. Orientational Fluctuations and Light Scattering	192
8.1.4. Disclinations	194
8.2. Viscous Properties	199
8.2.1. Experimental Determination of the Viscosity Coefficients	199
8.2.2. Viscous Torques	201
8.2.3. Orientational Relaxation	203
8.3. Nematic-Isotropic Transition	204

8.3.1. Molecular Theories of the Nematic Phase	204
8.3.2. Short-Range Order Effects in the Isotropic Phase: The Landau-de Gennes Model	206
8.3.3. Near-Neighbor Correlations	210
9. Cholesteric Liquid Crystals	213
<i>S. Chandrasekhar</i>	
9.1. Optical Properties	213
9.2. Flow Properties	219
10. Smectic Liquid Crystals	221
<i>S. Chandrasekhar</i>	
10.1. Smectic A	221
10.1.1. Continuum Theory of Smectic A	221
10.1.2. The Smectic A — Nematic Transition	224
10.1.3. Bilayer Smectic A and the Reentrant Phenomenon	228
10.2. Smectic C	230
10.3. Flexoelectricity in Liquid Crystals	232
10.4. Ferroelectric Liquid Crystals	234
11. Optical Applications of Liquid Crystals	239
<i>G. Durand</i>	
11.1. Why Use Liquid Crystals for Optical Applications?	239
11.1.1. Mechanical Properties of Liquid Crystal Phases ...	239
11.1.2. Coupling to External Fields	241
11.1.3. Coupling to Light	242
11.1.4. Conclusion	243
11.2. Optical Properties of Textures	243
11.2.1. Orientation of Uniform Textures	244
11.2.2. Optical Properties of Twisted Textures	247
11.2.3. Use of Dichroic Dyes in Solution	253
11.3. Texture Distortions Under the Action of an Electric Field	256
11.3.1. Electrically Controlled Birefringence	257
11.3.2. Twisted Nematic Valve	261
11.3.3. Dynamic-Scattering Mode	264
11.3.4. Texture Changes in Cholesterics	266
11.4. Multiplexing of Liquid-Crystal Displays	269
11.4.1. Response Time of Liquid-Crystal Texture Instabilities	269
11.4.2. Multiplexing Liquid Crystals	271

11.4.3.	Parallel Addressing	276
11.5.	Applications of Smectics	278
11.5.1.	Mechanical Properties of Smectic Textures	278
11.5.2.	Electric Field Effects on Smectic A	279
11.5.3.	The Thermally Excited Optical Smectic Valve	281
11.5.4.	The Thermal Electric X-Y Addressed Smectic	281
11.5.5.	Ferroelectric C*. The Bistable Optical Switch	283

References for Part II 287

III. LOW-DIMENSIONAL SOLIDS

12. Chemical Bonding 291

N. H. March
