Contents

Contributors *ix*
Preface *xi*

1 The Stability and Instability of Polymer Latices

R. H. Ottewill

I. Introduction 1
II. The Nature of Polymer Latex Particles 2
III. The Effect of Electrolytes on a Latex 6
IV. The Theory of the Stability of Lyophobic Colloids 8
V. Coagulation as a Kinetic Process 14
VI. An Alternative Approach to the Critical Coagulation Concentration 16
VII. The Determination of ccc Values 17
VIII. The Effect of Ions That Interact with Water 19
IX. Secondary Minimum Effects 22
X. The Effects of Organic Ions: Added Surfactants 26
XI. Ionic Head Group with a Charge of the Same Sign as the Particle 27
XII. Ionic Head Group with a Charge of Opposite Sign to the Particle 28
XIII. Nonionic Surfactants 31
XIV. Mixed Electrolyte Systems 35
XV. Heterocoagulation 36
XVI. Surface Coagulation 39
XVII. Peptization 40
XVIII. The Effects of Adsorbed or Grafted Macromolecules 42
XIX. Particle Stability in Emulsion Polymerization 45
XX. Summary 47
References 47

2 Particle Formation Mechanisms

F. K. Hansen and J. Ugelstad

I. Introduction 51
II. Micellar Nucleation: The Smith–Ewart Theory 54
III. Radical Absorption Mechanisms 56
IV. Micellar Nucleation: Newer Models 63
V. Homogeneous Nucleation 73
VI. Particle Coagulation during the Formation Period 82
VII. Nucleation in Monomer Droplets 86
References 91

3 Theoretical Predictions of the Particle Size and Molecular Weight Distributions in Emulsion Polymerizations

Gottfried Lichti, Robert G. Gilbert, and Donald H. Napper

I. Prediction of the PSD 94
II. Molecular Weight Distributions 115
III. Separability of MWD and PSD 141
IV. Conclusions 142
References 143

4 Theory of Kinetics of Compartmentalized Free-Radical Polymerization Reactions

D. C. Blackley

I. Introduction 146
II. Reaction Model Assumed 149
III. The Time-Dependent Smith–Ewart Differential Difference Equations: Methods Available for Their Solution 156
IV. Solution for the Steady State 164
V. Solutions for the Nonsteady State 167
VI. Predictions for Molecular Weight Distribution and Locus-Size Distribution 183
VII. Theory for Generation of Radicals in Pairs within Loci 185
List of Symbols 187
References 189

5 Desorption and Reabsorption of Free Radicals in Emulsion Polymerization

Mamoru Nomura

I. Introduction 191
II. Polymerization Rate Equations Involving Free-Radical Desorption 192
III. Derivation of Rate Coefficient for Radical Desorption from Particles 199
IV. Effect of Free-Radical Desorption on the Kinetics of Emulsion Polymerization 210
List of Symbols 217
References 219

6 Effects of the Choice of Emulsifier in Emulsion Polymerization

A. S. Dunn

I. Introduction 221
II. Monomer Emulsification 224
III. Emulsion Polymerization with Nonionic Emulsifiers 229
IV. Emulsion Polymerization with Ionic Emulsifiers 230
V. Latex Agglomeration 236
VI. Other Effects of Emulsifiers 237
References 243

7 Polymerization of Polar Monomers

V. I. Yeliseyeva

I. Introduction 247
II. Interface Characteristics of Polymeric Dispersions 249
III. Relationship between Emulsifier Adsorption and the Difference in the Boundary-Phase Polarity 250
IV. Mechanism of Particle Generation 257
V. Colloidal Behavior of Polymerization Systems 261
VI. Kinetics of Emulsifier Adsorption 268
VII. Mechanism of Formation and Structure of Particles 270
VIII. Polymerization Kinetics 278
IX. Relationship between Polymerization Kinetics and Adsorption Characteristic of the Interface 283
Nomenclature 286
References 287

8 Recent Developments and Trends in the Industrial Use of Latex

Carlton G. Force

I. Introduction 289
II. Factors in Adhesion 291
III. Bonding Applications 300
IV. Construction Applications 312
V. Rubber Goods 313
VI. Properties of Various Latexes 314
References 316

9 Latex Reactor Principles: Design, Operation, and Control

A. E. Hamielec and J. F. MacGregor

I. Introduction 319
II. Batch Reactors 320
III. Continuous Stirred-Tank Reactors: Steady-State Operation 333
IV. Continuous Stirred-Tank Reactors: Dynamic Behavior 339
V. On-Line Control of Continuous Latex Reactors 345
VI. Summary 351
Nomenclature 351
References 353

10 Emulsion Polymerization in Continuous Reactors

Gary W. Poehlein

I. Introduction 357
II. Smith-Ewart Case 2 Model for a CSTR 361
III. Deviations from Smith-Ewart Case 2 367
IV. Transient Behavior of CSTR Systems 375
V. Strategies for Process and Product Development 378
VI. Summary 381
References 381

11 Effect of Additives on the Formation of Monomer Emulsions and Polymer Dispersions

J. Uglestad, P. C. Mørk, A. Berge, T. Ellingsen, and A. A. Khan

I. Introduction 383
II. Thermodynamic Treatment of Swelling and Phase Distributions 384
III. Rate of Interphase Transport 392
IV. Preparation of Polymer Dispersions 396
V. Effect of Addition of Water-Insoluble Compounds to the Monomer Phase 401
VI. Emulsification with Mixed Emulsifier Systems 408
List of Symbols 411
References 412

12 Radiation-Induced Emulsion Polymerization

Vivian T. Stannett

I. Introduction 415
II. Laboratory Results with Different Monomers 418
III. Copolymerizations 433
IV. Radiation-Induced Emulsion Polymerization Using Electron Accelerators 436
V. Pilot Plant and Related Studies 437
References 447
