# CONTENTS

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	The architecture	2
1.2	A recognition example	3
1.3	A more realistic situation	6
	1.3.1 Error	6
	1.3.2 Occlusion	8
	1.3.3 Clutter	8
1.4	Shape description	9
1.5	The domain	10
	1.5.1 The viewpoint	11
	1.5.2 The image	12
	1.5.3 The model	14
1.6	Chapter summaries	15
<b>2</b>	<b>Object Recognition</b>	<b>18</b>
	2.0.1 The recognition framework	19
2.1	Correspondence	20
	2.1.1 Interpretation trees	20
	2.1.2 Hypothesize and test	24
	2.1.3 Generalized Hough transform	26
	2.1.4 Summary	28
2.2	Selection	29
2.3	Indexing	30
	2.3.1 Complexity	31
	2.3.2 Invariant types	33
	2.3.3 Summary	37
2.4	Conclusions	38
<b>3</b>	<b>Plane Algebraic Projective Invariants</b>	<b>39</b>
3.1	Notation	39
	3.1.1 Homogeneous coordinates and duality	40
	3.1.2 Conics	42
	3.1.3 Projective transformations	43
3.2	Plane projective invariants	46
3.3	The cross ratio	47
	3.3.1 Pinhole camera projectivities	51
3.4	Five coplanar points	54
	3.4.1 Geometric construction: using a cross ratio	55
	3.4.2 Canonical frame	57

3.4.3	Algebraic construction: using determinants	58
3.5	Two coplanar conics	62
3.5.1	Geometric construction: using the cross ratio	62
3.5.2	Algebraic construction: eigenvalue decomposition	64
3.6	A conic and two points	65
3.6.1	Geometric construction	65
3.6.2	Algebraic construction	67
3.7	Physical camera projectivities	69
3.8	Conclusions	70
<b>4</b>	<b>The Recognition Architecture: Algebraic Invariants: LEWIS1</b>	<b>72</b>
4.1	Indexing functions	73
4.2	The recognition process	75
4.2.1	Edge detection	77
4.2.2	Feature extraction	77
4.2.3	Invariant formation	79
4.2.4	Indexing	79
4.2.5	Hypothesis merging	81
4.2.6	Verification	88
4.3	Model acquisition and library formation	94
4.3.1	Errors in the invariant measurement	97
4.4	Experimental results	103
4.4.1	Complexity	107
4.5	Conclusions	109
4.5.1	The architecture	111
4.5.2	Efficiency in grouping	111
4.5.3	Extension	112
4.5.4	Verification	112
4.5.5	Observed errors	116
<b>5</b>	<b>Projective Invariants of Smooth Plane Curves: LEWIS2</b>	<b>117</b>
5.0.1	Plane curve normalization	118
5.0.2	Semi-differential invariant signatures	119
5.1	The canonical frame construction	121
5.1.1	The basic construction	122
5.1.2	Using the canonical frame for recognition	122
5.1.3	Refining the construction	125
5.1.4	Choice of frame	127
5.1.5	Choice of distinguished features	129
5.1.6	Choice of imaging model	131
5.2	Index functions	134

5.3	The model base	138
5.3.1	Overview of recognition	139
5.3.2	Acquisition and recognition of classes	140
5.3.3	Acquisition and recognition of objects	143
5.4	Model-based recognition	143
5.4.1	Segmentation	145
5.4.2	Stability	145
5.4.3	Hypothesis merging	146
5.4.4	Verification	147
5.5	Experimental results	150
5.6	Conclusions	151
<b>6</b>	<b>Segmentation and Grouping</b>	<b>156</b>
6.0.1	Overview	157
6.1	Line and conic extraction	158
6.1.1	Segmentation	159
6.1.2	Grouping	170
6.2	The canonical frame: detecting $\mathcal{M}$ curves	174
6.2.1	Bitangent location	174
6.2.2	Cast tangents	177
6.2.3	Inflection points and lines	179
6.2.4	Grouping	181
6.3	Conclusions	182
<b>7</b>	<b>Criteria for Representation of Shape</b>	<b>184</b>
7.1	Discrimination	184
7.2	Scope	186
7.3	Local versus global	187
7.4	Extension	188
7.5	Uniqueness	188
7.6	Stability	189
7.7	Completeness	189
7.8	Accessibility	190
7.9	Conclusions	190
<b>8</b>	<b>Invariants for 3D Objects</b>	<b>192</b>
8.1	The butterfly configuration	194
8.2	Rotationally symmetric objects	195
8.3	Polyhedral cage	199
8.3.1	Solid polyhedra	200
8.3.2	Forming the constraint equations	200
8.3.3	Interpretation of the kernel	202
8.3.4	Position-free polyhedra	203
8.3.5	Forming the invariants	205

8.3.6	Examples	206
8.3.7	Verifying the polyhedral assumption	207
8.3.8	Extending 3D knowledge	210
8.4	Objects with bilateral symmetry	212
8.4.1	Two-view projective invariants	214
8.4.2	Exploiting symmetry	215
8.4.3	3D projective reconstruction	217
8.5	Conclusions	223
8.5.1	Rotational symmetry	224
8.5.2	Caged point sets	225
8.5.3	Objects with symmetry	227
<b>9</b>	<b>Conclusions</b>	<b>229</b>
9.1	Invariant shape description	229
9.2	Grouping	231
9.2.1	Hypothesis extension	232
9.3	Scene consistency	232
9.4	Architecture	234
<b>A</b>	<b>Plane Perspectivities as a 3 by 3 Matrix</b>	<b>235</b>
<b>B</b>	<b>Computation of Projective Transformations</b>	<b>237</b>
B.1	Points and lines	237
B.2	A conic and three lines	239
B.3	A pair of conics	240
<b>C</b>	<b>Line and Conic Fitting</b>	<b>244</b>
C.1	Straight line fitting	244
C.2	The Bookstein algorithm	246
<b>D</b>	<b>Projective Equivalence of all the Kernel Solutions</b>	<b>249</b>
	<b>References</b>	<b>251</b>
