

Computational Physics

An Introduction

Franz J. Vesely

*Institute of Experimental Physics
University of Vienna
Vienna, Austria*

Plenum Press • New York and London

Contents

I	The Three Pillars of Computational Physics	1
1	Finite Differences	7
1.1	Interpolation Formulae	9
1.1.1	NGF Interpolation	9
1.1.2	NGB Interpolation	11
1.1.3	ST Interpolation	11
1.2	Difference Quotients	13
1.2.1	DNGF Formulae	13
1.2.2	DNGB Formulae	15
1.2.3	DST Formulae	16
1.3	Finite Differences in Two Dimensions	18
1.4	Sample Applications	20
1.4.1	Classical Point Mechanics	20
1.4.2	Diffusion and Thermal Conduction	21
2	Linear Algebra	23
2.1	Exact Methods	24
2.1.1	Gauss Elimination and Back Substitution	24
2.1.2	LU Decomposition	27
2.1.3	Tridiagonal Matrices: Recursion Method	30
2.2	Iterative Methods	32
2.2.1	Jacobi Relaxation	34
2.2.2	Gauss-Seidel Relaxation (GSR)	35
2.2.3	Successive Over-Relaxation (SOR)	36
2.2.4	Alternating Direction Implicit Method (ADI)	38
2.2.5	Conjugate Gradient Method (CG)	39
2.3	Eigenvalues and Eigenvectors	43
2.3.1	Largest Eigenvalue and Related Eigenvector	43
2.3.2	Arbitrary Eigenvalue/-vector: Inverse Iteration	45

2.4	Sample Applications	46
2.4.1	Diffusion and Thermal Conduction	47
2.4.2	Potential Equation	48
2.4.3	Electronic Orbitals	49
3	Stochastics	51
3.1	Equidistributed Random Variates	54
3.1.1	Linear Congruential Generators	54
3.1.2	Shift Register Generators	56
3.2	Other Distributions	58
3.2.1	Fundamentals	58
3.2.2	Transformation Method	61
3.2.3	Generalized Transformation Method:	63
3.2.4	Rejection Method	65
3.2.5	Multivariate Gaussian Distribution	69
3.2.6	Equidistribution in Orientation Space	75
3.3	Random Sequences	76
3.3.1	Fundamentals	76
3.3.2	Markov Processes	81
3.3.3	Autoregressive Processes	84
3.3.4	Random Walk 1: Wiener-Lévy Process	87
3.3.5	Random Walk 2: Markov Chains	89
II	Everything Flows	93
4	Ordinary Differential Equations	97
4.1	Initial Value Problems of First Order	98
4.1.1	Stability and Accuracy of Difference Schemes	99
4.1.2	Explicit Methods	103
4.1.3	Implicit Methods	105
4.1.4	Predictor-Corrector Method	107
4.1.5	Runge-Kutta Method	111
4.1.6	Extrapolation Method	113
4.2	Initial Value Problems of Second Order	113
4.2.1	Størmer-Verlet Method	115
4.2.2	Predictor-Corrector Method	118
4.2.3	Nordsieck Formulation of the PC Method	120
4.2.4	Runge-Kutta Method	122

4.2.5	Symplectic Algorithms	122
4.2.6	Numerov's Method	128
4.3	Boundary Value Problems	130
4.3.1	Shooting Method	131
4.3.2	Relaxation Method	134
5	Partial Differential Equations	137
5.1	Initial Value Problems I (Hyperbolic)	142
5.1.1	FTCS Scheme; Stability Analysis	142
5.1.2	Lax Scheme	143
5.1.3	Leapfrog Scheme (LF)	146
5.1.4	Lax-Wendroff Scheme (LW)	148
5.1.5	Lax and Lax-Wendroff in Two Dimensions	148
5.2	Initial Value Problems II (Parabolic)	151
5.2.1	FTCS Scheme	152
5.2.2	Implicit Scheme of First Order	153
5.2.3	Crank-Nicholson Scheme (CN)	155
5.2.4	Dufort-Frankel Scheme (DF)	156
5.3	Boundary Value Problems: Elliptic DE	157
5.3.1	ADI Method for the Potential Equation	161
5.3.2	Fourier Transform Method (FT)	164
5.3.3	Cyclic Reduction (CR)	168

III Anchors Aweigh **171**

6	Simulation and Statistical Mechanics	175
6.1	Model Systems of Statistical Mechanics	178
6.2	Monte Carlo Method	182
6.2.1	Standard MC technique	182
6.2.2	Simulated Annealing	185
6.3	Molecular Dynamics Simulation	187
6.3.1	Hard Spheres	187
6.3.2	Continuous Potentials	188
6.4	Evaluation of Simulation Experiments	192
6.4.1	Pair Correlation Function	192
6.4.2	Autocorrelation Functions	194
6.5	Particles and Fields	196
6.5.1	Ewald summation	196

6.5.2	Particle-Mesh Methods (PM and P3M):	199
6.6	Stochastic Dynamics	203
7	Quantum Mechanical Simulation	207
7.1	Diffusion Monte Carlo (DMC)	208
7.2	Path Integral Monte Carlo (PIMC)	213
7.3	Wave Packet Dynamics (WPD)	221
7.4	Density Functional Molecular Dynamics (DFMD)	225
8	Hydrodynamics	229
8.1	Compressible Flow without Viscosity	230
8.1.1	Explicit Eulerian Methods	231
8.1.2	Particle-in-Cell Method (PIC)	232
8.1.3	Smoothed Particle Hydrodynamics (SPH)	234
8.2	Incompressible Flow with Viscosity	239
8.2.1	Vorticity Method	241
8.2.2	Pressure Method	242
8.2.3	Free Surfaces: Marker-and-Cell Method (MAC)	246
8.3	Cellular Automata and Hydrodynamics	246
	Appendix	255
	A Machine Errors	255
	B Discrete Fourier Transformation	259
B.1	Fundamentals	259
B.2	Fast Fourier Transform (FFT)	261
	References	265
	Index	273
