Physics of Critical Fluctuations

With 121 Illustrations

Springer

Contents

Preface v

1 Classical Approach 1
- 1.1 Introduction . . . 1
- 1.2 Landau Theory . . . 2
  - 1.2.1 The Scalar Order Parameter . . . 3
  - 1.2.2 The Vector Order Parameter . . . 4
- 1.3 Broken Symmetry and Condensation . . . 5
  - 1.3.1 Bose-Einstein Condensation . . . 9
- 1.4 Ergodicity . . . 11
  - 1.4.1 Susceptibility . . . 12
  - 1.4.2 The Ergodic Hypothesis . . . 12
- 1.5 Gaussian Approximation . . . 14
  - 1.5.1 Goldstone Branch of Excitations . . . 15
  - 1.5.2 Correlation Functions . . . 16
  - 1.5.3 Microscopic Scales in Phase Transitions . . . 17
- 1.6 The Ginzburg Criterion . . . 18
  - 1.6.1 Critical Dimensions . . . 20
- 1.7 The Scaling Hypothesis . . . 24
  - 1.7.1 Scaling Laws . . . 25

2 The Ginzburg-Landau Functional 29
- 2.1 Introduction . . . 29
- 2.2 Classical Systems . . . 30
  - 2.2.1 The Ising Model . . . 30
  - 2.2.2 The Heisenberg Model . . . 35
  - 2.2.3 Interacting Particles . . . 40
- 2.3 Quantum Systems . . . 51
  - 2.3.1 The Heisenberg Hamiltonian . . . 52
  - 2.3.2 Bose Gas . . . 53

2.3.3 Bose-Einstein Condensation 57
2.3.4 Fermi Gas 59

3 Wilson's Renormalization Scheme 65
3.1 Introduction 65
3.2 Kadanoff's Invariance 67
3.3 Wilson's Theory 69
3.3.1 Derivation of the RG Equation 70
3.3.2 Linearized RG Equation 78
3.3.3 Redundant Eigenvectors 83
3.3.4 Scaling Properties and Critical Exponents 89
3.3.5 Gaussian Fixed Point 95
3.3.6 The Scaling-Field Method 99
3.3.7 ϵ-Expansion in Scaling Fields 103

4 Field Theoretical RG 109
4.1 Introduction 109
4.2 Perturbation Theory 110
4.2.1 General Definitions 110
4.2.2 Graph Equations for ϕ^4-Model 115
4.2.3 Rules of Evaluation 117
4.2.4 Regularization 118
4.3 Renormalization 119
4.3.1 Calculus of Divergences 120
4.3.2 Simple Generalizations 122
4.3.3 Multiplicative Group Equations 124
4.3.4 Scaling Properties 127
4.3.5 Differential Group Equations 128
4.4 Scaling Laws 129
4.5 ϵ-Expansion 133
4.5.1 Addition of Counter-Terms 134
4.5.2 An Alternative Approach 135
4.5.3 Results 136
4.5.4 Correction to Scaling 138
4.5.5 Improvement of Convergence 138
4.6 Expansions at $d = 3$ 139
4.6.1 Comparison of Massive and Massless Theories 141
4.6.2 Experimental Situation 142
4.7 Results of Different Approaches 144

5 Generalized RG Approach **147**
5.1 Introduction 147
5.2 Scale Transformations 148
5.2.1 Differential Form of Scale Covariance 149
5.2.2 Two Ways of Utilizing Scale Covariance 150
5.3 Scale Equations 151
5.3.1 Conventional Approach 151
5.3.2 Generalized Approach 154
5.4 RG Equations 155
5.4.1 Conventional Approach 156
5.4.2 Generalized Approach 157
5.4.3 RG as a Characteristic Set of Scale Equations 159
5.5 Applications of Generalized SE 160
5.5.1 Structure of the Correlation Function at the Transition Point 161
5.5.2 Function $\eta(q)$ at the Fixed Point 163
5.6 η-Expansion 166
5.6.1 General Scheme of the Method 167
5.6.2 Solution of Equations 171
5.6.3 Evaluation of the η-Exponent 172
5.6.4 Evaluation of the ν-Exponent 174
5.7 Comparison of Different RG Approaches 176

6 RG Study of Particular Systems **179**
6.1 Reduction of the Characteristic Set 179
6.2 The Gaussian Model 182
6.3 The ϕ^4 Model 184
6.3.1 General Consideration 184
6.3.2 $\mathcal{O}(n)$ Symmetry 190
6.3.3 Cubic Symmetry 193
6.3.4 Interacting Fields 200
6.3.5 Logarithmical Corrections 207
6.4 The $\phi^4 + \phi^6$-Model 208
6.5 Free Energy in the Critical Region 212
6.5.1 Quatric Form in the Instability Region 212
6.5.2 Cubic Symmetry 213
6.5.3 Interacting Fields 218

7 Competing Interactions **223**
7.1 Heisenberg Magnets 223
7.1.1 RG Equations 224
7.1.2 Fixed Points 225

7.1.3 Flow Lines and Phase Diagrams 227
7.2 Bicritical Points in Antiferromagnets 233
7.2.1 Ginzburg-Landau Functional 234
7.2.2 RG Analysis 236
7.2.3 Experimental Data 240
7.3 Dipole Interaction 242
7.3.1 Dipole Hamiltonian 243
7.3.2 RG Analysis 244
7.3.3 Cubic Symmetry 245
7.3.4 Tetragonal Symmetry 247
7.4 Impure Systems 250
7.4.1 Harris's Criterion 253
7.4.2 The Replica Method 254
7.4.3 RG Analysis 256
7.4.4 Flow Line Runaway 259
7.4.5 Loop Renormalizations 260
7.4.6 Anisotropic Systems 267
7.4.7 Systems with Competing Interactions 272

8 Exactly Solvable Models and RG 287
8.1 Fluctuation Effects in Spherical Model 287
8.1.1 Inhomogeneous Ordering 289
8.1.2 Homogeneous Ordering 293
8.2 Inversion of Phase Transitions 294
8.3 Model with Reduced Interaction 301
8.3.1 General Consideration 301
8.3.2 Critical Exponents. Crossover 306
8.4 First-Order Transitions 308
8.4.1 Cubic Symmetry 309
8.4.2 Interacting Fields 313
8.5 RG and Reduced Interactions 317
8.5.1 The RG Equation for the Model 317
8.5.2 Critical Exponents 320

9 Application to Copper Oxides 323
9.1 Introduction 323
9.2 La_2CuO_4 Systems 324
9.2.1 The Ginzburg-Landau Functional 327
9.2.2 Mean Field Approximation 332
9.2.3 RG Analysis 333
9.2.4 The Influence of Impurities 337
9.3 Oxygen Ordering in $ABa_2Cu_3O_{6+x}$ 338

9.3.1 Description of the Model 340
9.3.2 Free Energy 341
9.3.3 Phase Transition 344
9.3.4 Change of Oxygen Concentration 347
9.4 d-Pairing in the Superconducting State 351
9.4.1 RG Approach 352
9.4.2 An Exactly Solvable Model 356
9.4.3 Comparison with RG 360
9.4.4 Conclusion 363

A Evaluation of Integrals **365**
A.1 Gaussian Integral 365
A.2 A Typical Diagram 366

B Local RG **367**
B.1 General Consideration 367
B.2 Spectral Theorems 369
B.3 Local Equation in the Limit $m \to \infty$ 371

Bibliography **375**

Index **387**
