

DNA–Protein: Structural Interactions

EDITED BY

David M. J. Lilley

*Professor of Molecular Biology
and
Director, CRC Nucleic Acid
Structure Research Group,
University of Dundee*

Contents

<i>List of contributors</i>	xi
1 DNA-protein interaction at high resolution	1
BEN LUISI	
1. Introduction	1
2. Classification of the DNA-binding proteins	2
2.1 The helix-turn-helix	5
2.2 Zinc-bearing DNA-binding domains	8
2.3 Zipper group	15
2.4 β -sheet group	15
2.5 Enzymes: assorted motifs	16
2.6 β -barrel dimerization, HMG-box, and other motifs	20
2.7 Some unifying themes	21
3. Stereochemistry of protein-DNA interactions	21
3.1 Side- and main-chain interactions with bases and phosphates	21
3.2 Water-mediated contacts	23
3.3 Buried surfaces	25
3.4 Electrostatics	26
4. DNA structure and protein-DNA interactions	27
4.1 Some mechanical properties of duplex DNA	27
4.2 DNA conformability in catalysis	28
4.3 DNA conformability in equilibrium complexes	31
4.4 Specific and non-specific complexes	34
5. Cooperativity	34
6. Summary and conclusions	37
Acknowledgements	39
References	39
2 DNA bending by sequence and proteins	49
ANDREW A. TRAVERS	
1. Introduction	49

2. The local conformation of DNA	49
3. DNA curvature	50
3.1 Intrinsic curvature of DNA	50
3.2 The molecular basis for DNA curvature	51
4. Global DNA bending	54
5. Protein-induced DNA deformation	55
5.1 The distortion of DNA by proteins	55
5.2 DNA untwisting	57
5.3 The selectivity of protein-induced DNA deformation	61
6. Nucleoprotein complexes	62
6.1 The assembly of nucleoprotein complexes	62
6.2 The architecture of nucleoprotein complexes	66
Acknowledgements	68
References	68
3 Enzymes that supercoil DNA	76
JAMES C. WANG	
1. Introduction	76
2. DNA supercoiling by DNA gyrase	76
3. DNA supercoiling by transcription and other processes involving the translocation of a macromolecular assembly along a DNA	81
3.1 Transcriptional supercoiling	81
3.2 Supercoiling by DNA helicases	84
4. DNA supercoiling by other mechanisms	86
5. Concluding remarks	86
References	87
4 Recognition of DNA damage and repair	90
AZIZ SANCAR	
1. Introduction	90
2. Direct recognition and repair	90
2.1 DNA photolyase	91
2.2 O ⁶ MeG-DNA methyltransferase (MTase)	94
2.3 DNA N-glycosylases	97

49	3. Recognition and repair mediated by molecular matchmakers	98
50	3.1 Excision nuclease (excinuclease)	98
50	3.2 Strand-specific mismatch repair	102
51	4. Recognition of damage by proxy	104
54	4.1 Stimulation of excinuclease by photolyase	104
55	4.2 Transcription–repair coupling	105
55	5. Conclusions	106
57	References	106
61		
62	5 Structure-recognition by DNA junction resolving enzymes	114
62	DAVID M. J. LILLEY	
66		
68	1. Structure-recognition by DNA junction resolving enzymes	114
68	2. Genetic recombination	114
76	3. DNA junction resolving enzymes	116
	4. Branched DNA structures	118
	4.1 The four-way DNA junction	118
76	4.2 The three-way DNA junction	122
76	4.3 DNA base bulges	122
	5. Interactions between resolving enzymes and DNA	124
	5.1 Location of cleavage sites	124
81	5.2 Structure-recognition by resolving enzymes	126
81	5.3 Structure-recognition in a wider context	129
84	6. General importance of structure-recognition in recombination	130
86	Acknowledgements	133
86	References	133
87		
90	6 Site-specific recombinases and their interactions with DNA	141
90	REID C. JOHNSON	
90		
90	1. Introduction	141
91	2. The DNA invertase–resolvase family	142
94	2.1 General description of reactions	142
97	2.2 Modular structure of the DNA invertase–resolvase proteins	143

2.3 The recombination site for DNA inversion	145
2.4 The resolvase recombination site	146
2.5 Specific binding of the C-terminal domain to DNA	148
2.6 Crystal structure of the N-terminus of resolvase	155
2.7 Model of an intact recombinase bound to a recombination site	157
3. The integrase family	160
3.1 General description of reactions	160
3.2 The FLP and Cre site-specific recombination systems	160
3.3 The λ site-specific recombination system	165
4. Summary	169
Acknowledgements	170
References	170
7 The HMG-box domain	177
MARCO E. BIANCHI	
1. Introduction	177
2. The HMG-box motif	177
3. The HMG-box proteins: an overview	178
3.1 HMG1 and HMG1-like proteins	178
3.2 Nucleolar and mitochondrial transcription factors	181
3.3 Sequence-specific transcription factors containing HMG-boxes	182
3.4 HMG-box proteins that recognise DNA-cisplatin adducts	183
4. The DNA-binding properties of HMG-box proteins and isolated HMG-boxes	183
5. Structural information on HMG-boxes	188
5.1 Solution structure of HMG-box domain B of mammalian HMG1	188
5.2 Mutant HMG-boxes with reduced stability or DNA affinity	188
6. Prokaryotic analogues of HMG-box proteins	191
7. Biological significance of HMG-box-induced DNA bending	191
8. Conclusion and perspectives	193
References	194
