

Robert G. Hunsperger

Integrated Optics

Theory and Technology

Fourth Edition

With 195 Figures and 17 Tables

Springer

Contents

1. Introduction	1
1.1 Advantages of Integrated Optics	2
1.1.1 Comparison of Optical Fibers with Other Interconnectors	3
1.1.2 Comparison of Optical Integrated Circuits with Electrical Integrated Circuits	7
1.2 Substrate Materials for Optical Integrated Circuits	9
1.2.1 Hybrid Versus Monolithic Approach	9
1.2.2 III-V and II-VI Ternary Systems	10
1.2.3 Hybrid OIC's in LiNbO_3	12
1.2.4 OIC's in Glasses and Polymers	13
1.3 Organization of this Book	14
2. Optical Waveguide Modes	18
2.1 Modes in a Planar Waveguide Structure	18
2.1.1 Theoretical Description of the Modes of a Three-Layer Planar Waveguide	18
2.1.2 Cutoff Conditions	21
2.1.3 Experimental Observation of Waveguide Modes	22
2.2 The Ray-Optic Approach to Optical Mode Theory	26
2.2.1 Ray Patterns in the Three-Layer Planar Waveguide ..	26
2.2.2 The Discrete Nature of the Propagation Constant β ..	29
Problems	30
3. Theory of Optical Waveguides	32
3.1 Planar Waveguides	32
3.1.1 The Basic Three-Layer Planar Waveguide	32
3.1.2 The Symmetric Waveguide	35
3.1.3 The Asymmetric Waveguide	37
3.2 Rectangular Waveguides	38
3.2.1 Channel Waveguides	39
3.2.2 Strip-Loaded Waveguides	43
Problems	46
4. Waveguide Fabrication Techniques	48
4.1 Deposited Thin Films	48

4.1.1	Sputtered Dielectric Films	48
4.1.2	Deposition from Solutions	51
4.1.3	Organosilicon Films	52
4.2	Substitutional Dopant Atoms	52
4.2.1	Diffused Dopants	52
4.2.2	Ion Exchange and Migration	54
4.2.3	Ion Implantation	55
4.3	Carrier-Concentration-Reduction Waveguides	57
4.3.1	Basic Properties of Carrier-Concentration-Reduction Waveguides	57
4.3.2	Carrier Removal by Proton Bombardment	59
4.4	Epitaxial Growth	60
4.4.1	Basic Properties of Epitaxially Grown Waveguides	60
4.4.2	$\text{Ga}_{(1-x)}\text{Al}_x\text{As}$ Epitaxially Grown Waveguides	61
4.4.3	Epitaxial Waveguides in Other III-V and II-VI Materials	64
4.4.4	Molecular Beam Epitaxy	65
4.4.5	Metal-organic Chemical Vapor Deposition	66
4.5	Electro-Optic Waveguides	67
4.6	Methods for Fabricating Channel Waveguides	69
4.6.1	Ridged Waveguides Formed by Etching	69
4.6.2	Strip-Loaded Waveguides	70
4.6.3	Masked Ion Implantation or Diffusion	71
	Problems	72
5.	Losses in Optical Waveguides	74
5.1	Scattering Losses	74
5.1.1	Surface Scattering Loss	75
5.2	Absorption Losses	77
5.2.1	Interband Absorption	77
5.2.2	Free Carrier Absorption	79
5.3	Radiation Losses	83
5.3.1	Radiation Loss from Planar and Straight Channel Waveguides	83
5.3.2	Radiation Loss from Curved Channel Waveguides	84
5.4	Measurement of Waveguide Losses	87
5.4.1	End-Fire Coupling to Waveguides of Different Length	87
5.4.2	Prism-Coupled Loss Measurements	89
5.4.3	Scattering Loss Measurements	90
	Problems	91
6.	Waveguide Input and Output Couplers	93
6.1	Fundamentals of Optical Coupling	93
6.2	Transverse Couplers	94

6.2.1	Direct Focusing	94
6.2.2	End-Butt Coupling	95
6.3	Prism Couplers	99
6.4	Grating Couplers	103
6.4.1	Basic Theory of the Grating Coupler	103
6.4.2	Grating Fabrication	105
6.5	Tapered Couplers	107
6.6	Fiber to Waveguide Couplers	108
6.6.1	Butt Coupling	108
6.6.2	Tapered Film Fiber Couplers	110
	Problems	111
7.	Coupling Between Waveguides	113
7.1	Multilayer Planar Waveguide Couplers	113
7.2	Dual-Channel Directional Couplers	114
7.2.1	Operating Characteristics of the Dual-Channel Coupler	114
7.2.2	Coupled-Mode Theory of Synchronous Coupling	116
7.2.3	Methods of Fabricating Dual-Channel Directional Couplers	120
7.2.4	Applications Involving Directional Couplers	124
7.3	Butt-Coupled Ridge Waveguides	124
7.4	Branching Waveguide Couplers	125
	Problems	126
8.	Electro-Optic Modulators	128
8.1	Basic Operating Characteristics of Switches and Modulators	128
8.1.1	Modulation Depth	128
8.1.2	Bandwidth	129
8.1.3	Insertion Loss	129
8.1.4	Power Consumption	130
8.1.5	Isolation	130
8.2	The Electro-Optic Effect	131
8.3	Single-Waveguide Electro-Optic Modulators	131
8.3.1	Phase Modulation	132
8.3.2	Polarization Modulation	133
8.3.3	Intensity Modulation	134
8.3.4	Electro-Absorption Modulation	135
8.4	Dual-Channel Waveguide Electro-Optic Modulators	137
8.4.1	Theory of Operation	137
8.4.2	Operating Characteristics of Dual-Channel Modulators	140
8.5	Mach-Zehnder Type Electro-Optic Modulators	143

8.6	Electro-Optic Modulators Employing Reflection or Diffraction	144
8.6.1	Bragg-Effect Electro-Optic Modulators	144
8.6.2	Electro-Optic Reflection Modulators	146
8.7	Comparison of Waveguide Modulators to Bulk Electro-Optic Modulators	147
8.8	Traveling Wave Electrode Configurations	149
	Problems	150
9.	Acousto-Optic Modulators	154
9.1	Fundamental Principles of the Acousto-Optic Effect	154
9.2	Raman-Nath-Type Modulators	156
9.3	Bragg-Type Modulators	157
9.4	Bragg-Type Beam Deflectors and Switches	161
9.5	Performance Characteristics of Acousto-Optic Modulators and Beam Deflectors	163
9.6	Acousto-Optic Frequency Shifters	166
	Problems	168
10.	Basic Principles of Light Emission in Semiconductors	170
10.1	A Microscopic Model for Light Generation and Absorption in a Crystalline Solid	170
10.1.1	Basic Definitions	170
10.1.2	Conservation of Energy and Momentum	172
10.2	Light Emission in Semiconductors	175
10.2.1	Spontaneous Emission	175
10.2.2	Stimulated Emission	181
10.3	Lasing	183
10.3.1	Semiconductor Laser Structures	183
10.3.2	Lasing Threshold	184
10.3.3	Efficiency of Light Emission	186
	Problems	187
11.	Semiconductor Lasers	189
11.1	The Laser Diode	189
11.1.1	Basic Structure	189
11.1.2	Optical Modes	190
11.1.3	Lasing Threshold Conditions	191
11.1.4	Output Power and Efficiency	195
11.2	The Tunnel-Injection Laser	198
11.2.1	Basic Structure	198
11.2.2	Lasing Threshold Conditions	200
	Problems	201
12.	Heterostructure, Confined-Field Lasers	203
12.1	Basic Heterojunction Laser Structures	204

12.1.1	Single Heterojunction (SH) Lasers	204
12.1.2	Double Heterostructure (DH) Lasers	205
12.2	Performance Characteristics of the Heterojunction Laser	206
12.2.1	Optical Field Confinement	206
12.2.2	Carrier Confinement	209
12.2.3	Comparison of Laser Emission Characteristics	210
12.3	Control of Emitted Wavelength	211
12.3.1	Ga _(1-x) Al _x As Lasers for Fiber-Optic Applications	211
12.3.2	Lasers Made of Quaternary Materials	213
12.3.3	Long-Wavelength Lasers	213
12.4	Advanced Heterojunction Laser Structures	214
12.4.1	Stripe Geometry Lasers	214
12.4.2	Single-Mode Lasers	216
12.4.3	Integrated Laser Structures	217
12.5	Reliability	221
12.5.1	Catastrophic Failure	221
12.5.2	Gradual Degradation	221
12.6	Laser Amplifiers	222
	Problems	224
13.	Distributed-Feedback Lasers	226
13.1	Theoretical Considerations	226
13.1.1	Wavelength Dependence of Bragg Reflections	226
13.1.2	Coupling Efficiency	228
13.1.3	Lasing with Distributed Feedback	231
13.2	Fabrication Techniques	232
13.2.1	Effects of Lattice Damage	233
13.2.2	Grating Location	233
13.2.3	DBR Lasers	237
13.3	Performance Characteristics	238
13.3.1	Wavelength Selectability	239
13.3.2	Optical Emission Linewidth	240
13.3.3	Stability	240
13.3.4	Threshold Current Density and Output Power	242
	Problems	243
14.	Direct Modulation of Semiconductor Lasers	244
14.1	Basic Principles of Direct Modulation	244
14.1.1	Amplitude Modulation	244
14.1.2	Pulse Modulation	247
14.1.3	Frequency Modulation	249
14.2	Microwave Frequency Modulation of Laser Diodes	251
14.2.1	Summary of Early Experimental Results	251
14.2.2	Factors Limiting Modulation Frequency	251
14.2.3	Design of Laser Diode Packages for Microwave Modulation	255

14.3 Monolithically Integrated Direct Modulators	257
14.4 Future Prospects for Microwave Modulation of Laser Diodes	258
Problems	259
15. Integrated Optical Detectors	261
15.1 Depletion Layer Photodiodes	261
15.1.1 Conventional Discrete Photodiodes	261
15.1.2 Waveguide Photodiodes	264
15.1.3 Effects of Scattering and Free-Carrier Absorption	265
15.2 Specialized Photodiode Structures	266
15.2.1 Schottky-Barrier Photodiode	266
15.2.2 Avalanche Photodiodes	267
15.2.3 p-i-n Photodiodes	269
15.2.4 Metal-Semiconductor-Metal Photodiodes	270
15.3 Techniques for Modifying Spectral Response	271
15.3.1 Hybrid Structures	271
15.3.2 Heteroepitaxial Growth	272
15.3.3 Proton Bombardment	275
15.3.4 Electro-Absorption	278
15.4 Factors Limiting Performance of Integrated Detectors	281
15.4.1 High Frequency Cutoff	281
15.4.2 Linearity	282
15.4.3 Noise	282
Problems	283
16. Quantum-Well Devices	287
16.1 Quantum Wells and Superlattices	287
16.2 Quantum-Well Lasers	289
16.2.1 Single Quantum Well Lasers	289
16.2.2 Multiple Quantum Well Lasers	292
16.3 Quantum-Well Modulators and Switches	296
16.3.1 Electro-Absorption Modulators	297
16.3.2 Electro-Optic Effect in Quantum Wells	300
16.3.3 Multiple Quantum Well Switches	301
16.4 Quantum-Well Detectors	303
16.4.1 Photoconductive Detectors	303
16.4.2 MQW Avalanche Photodiodes	304
16.5 Self-Electro-Optic Effect Devices	304
16.6 Quantum-Well Devices in OEIC's	306
16.6.1 Integrated Laser/Modulators	306
16.6.2 A Four-Channel Transmitter Array with MQW Lasers	308
Problems	309

17. Applications of Integrated Optics and Current Trends	311
17.1 Applications of Optical Integrated Circuits	311
17.1.1 RF Spectrum Analyzer	311
17.1.2 Monolithic Wavelength-Multiplexed Optical Source ..	314
17.1.3 Analog-to-Digital Converter (ADC)	315
17.1.4 Integrated-Optic Doppler Velocimeter	316
17.1.5 An IO Optical Disk Readhead	318
17.1.6 OIC Temperature Sensor	320
17.1.7 IO High Voltage Sensor	321
17.2 Opto-Electronic Integrated Circuits	322
17.2.1 An OEIC Transmitter	322
17.2.2 An OEIC Receiver	324
17.2.3 An OEIC Phased-Array Antenna Driver	324
17.3 Devices and Systems for Telecommunications	325
17.3.1 Trends in Optical Telecommunications	326
17.3.2 New Devices for Telecommunications	329
17.4 Opto-Microwave Applications	330
17.5 Future Projections	332
References	335
Subject Index	363
