# Contents

---

<b>1</b>	<b>General Introduction</b> .....	1
1.1	Canonical transition state theory (CTST) .....	5
1.2	Variational transition state theory (VTST) .....	7
	References .....	8
<b>2</b>	<b>Early Theories</b> .....	9
2.1	Historical development .....	9
2.2	The Lindemann theory .....	10
2.3	Comparison of Lindemann theory with experiment .....	12
2.4	The Hinshelwood modification .....	14
2.5	Comparison of Hinshelwood–Lindemann theory with experiment .....	18
2.6	The further development of unimolecular reaction rate theories .....	20
2.7	Slater's harmonic theory .....	21
2.8	The Rice–Ramsperger–Kassel theories .....	31
2.9	Development and application of the RRK theories .....	35
	References .....	38
<b>3</b>	<b>Basic RRKM theory</b> .....	39
3.1	The RRKM reaction scheme .....	39
3.2	Classification of energies and degrees of freedom .....	41
3.3	Terminology for energies .....	42
3.4	Expression for $\delta k_{1(E^* \rightarrow E^* + \delta E^*)}/k_2$ .....	43
3.5	Expression for $k_a(E^*)$ .....	45
3.6	RRKM expression for $k_{\text{uni}}$ .....	50
3.7	The high-pressure limit .....	51
3.8	The low-pressure limit .....	53
3.9	Statistical factors .....	56
3.10	Improved treatment of adiabatic rotations .....	59
3.11	The quantities $W(E_{\text{vr}}^+) \equiv \sum_{E_{\text{vr}}^+=0}^{E^+} P(E_{\text{vr}}^+)$ and $\rho(E^*)$ .....	64
3.12	Assumptions of the basic RRKM theory .....	69
	References .....	75

<b>4</b>	<b>The Evaluation of Sums and Densities of Molecular Quantum States</b>	79
4.1	Separation of vibrational and rotational degrees of freedom ....	80
4.2	Direct count of vibrational states .....	82
4.3	Monte Carlo methods .....	87
4.4	Classical treatment of vibrational states and derived semiclassical approximations .....	89
4.5	Classical treatment of rotational state distributions .....	101
4.6	Combined vibrational-rotational systems .....	110
	References .....	113
<b>5</b>	<b>Numerical Application of the RRKM theory</b> .....	115
5.1	Calculation of activation parameters for a postulated model of the reaction .....	115
5.2	Specification of a model for the reaction .....	117
5.3	The RRKM integration .....	124
5.4	Application of RRKM theory to the isomerisation of 1,1-dichlorocyclopropane .....	130
5.5	Sensitivity of the RRKM calculation to computational details and features of the model .....	133
	References .....	143
<b>6</b>	<b>Reactions with Loose Transition States</b> .....	145
6.1	Correlation of vibrational and rotational motion .....	145
6.2	The minimum sum of states criterion .....	148
6.3	Flexible transition state theory (FTST) .....	156
6.4	Statistical adiabatic channel model (SACM) .....	161
6.5	Canonical rate constants .....	164
6.6	Canonical flexible transition state theory (CFTST) .....	168
6.7	Inverse Laplace Transformation (ILT) .....	173
	References .....	178
<b>7</b>	<b>Master Equation Analysis of Collisional Energy Transfer</b> .....	177
7.1	Systems with continuous state distributions .....	178
7.2	Energy-grained master equation (EGME) .....	180
7.3	Chemical activation .....	184
7.4	Equilibration .....	190
7.5	Isomerisation .....	193
7.6	Solution of the energy-grained master equation .....	197
7.7	Diffusion models of unimolecular reactions .....	207
	References .....	213

<b>8</b>	<b>Approximate Techniques of Unimolecular Reactions</b> .....	215
8.1	The low-pressure limit .....	216
8.2	The high-pressure limit .....	221
8.3	Pressure dependence—analytical representation of the fall-off curve .....	222
	References .....	232
<b>9</b>	<b>Energy Transfer</b> .....	235
9.1	Intermolecular energy transfer .....	235
9.2	Intramolecular energy transfer .....	254
	References .....	263
<b>10</b>	<b>Kinetic Isotope Effects in Unimolecular Reactions</b> .....	269
10.1	General discussion of isotope effects .....	270
10.2	Basis of application to unimolecular reactions .....	274
10.3	Secondary kinetic isotope effects on $k_a(E^*)$ (theory and experiment) .....	275
10.4	Primary kinetic isotope effects on $k_a(E^*)$ (theory and experiment) .....	277
10.5	Isotope effects in thermal unimolecular reactions (theory and experiment) .....	282
	References .....	288
<b>11</b>	<b>Experimental Data</b> .....	291
11.1	Thermal energisation .....	291
11.2	Other methods of energisation .....	327
11.3	Ion and ion—molecule reactions .....	348
11.4	Association reactions .....	357
	References .....	365
<b>Appendix 1</b>	<b>Nomenclature</b> .....	379
<b>Appendix 2</b>	<b>Statistical Mechanics</b> .....	383
<b>Appendix 3</b>	<b>The Vibrational Analysis of Polyatomic Molecules</b> .....	391
<b>Appendix 4</b>	<b>The Gamma Function <math>\Gamma(n)</math></b> .....	399
<b>Appendix 5</b>	<b>Monte Carlo Algorithm for the Evaluation of Vibrational State Sums</b> .....	401
<b>Appendix 6</b>	<b>Matrix solution of the energy-grained master equation</b> ....	405
	<b>Index</b> .....	407
