PREFACE xi

1 M. KAUFMANN, W. MUSCHIK AND D. SCHIRRMEISTER
ON POSITIVITY OF RATE OF ENTROPY IN QUANTUM-THERMODYNAMICS 1
1 Introduction 1
2 Dynamics 2
2.1 Canonical dynamics 3
2.2 Generalized Robertson dynamics 4
2.3 Contact time dynamics 5
3 Positive rate of entropy 6
4 Discussion 8

2 K. RATEITSCHAK, J. FREUND AND W. EBELING
ENTROPY OF SEQUENCES GENERATED BY NONLINEAR PROCESSES: THE LOGISTIC MAP 11
1 Introduction 11
2 Symbolic Dynamics of the Feigenbaum Accumulation Point 14
3 Derivation of the Entropy Formula 17
4 Arbitrary Partitions 20
5 Conclusions and Outlook 24

3 GEOFFREY L. SEWELL
DEVELOPMENTS IN NORMAL AND GRAVITATIONAL THERMODYNAMICS 27
1 Introduction 27
2 Normal Systems 28
2.1 Thermodynamic Variables 29
2.2 Thermodynamic Potentials 30
2.3 Comments 30
2.4 Equilibrium States and Phase Structure 31
2.5 Proposition 31
3 Non-relativistic Gravitational Systems 31

4 Black Hole Thermodynamics 32
4.1 Note 34
4.2 Derivation of the GSL 35

4 G. LEBON, D. JOU AND J. CASAS-VÁZQUEZ
EXTENDED IRREVERSIBLE THERMODYNAMICS: STATEMENTS AND PROSPECTS **37**
1 Introduction 37
2 The Basic Statements of EIT 38
2.1 Enlargement of the Space of Independent Variables . 38
2.2 Evolution Equations for the C and F Variables . . . 39
2.3 Existence of a Nonequilibrium Entropy 40
3 Illustration: Heat Conduction in Rigid Solids 42
3.1 The State Variables 42
3.2 The Evolution Equations 43
3.3 Restrictions Placed by the Second Law and The Convexity Requirement 43
4 EIT: Some Open Problems 45
4.1 Physical Meaning of the Nonequilibrium Equations of State 45
4.2 Behaviour at High Values of the Fluxes 47
4.3 Thermodynamic Stability and Positiveness of Temperature Profiles 48
4.4 Higher-Order Fluxes 49
4.5 Phase Transitions in Steady Nonequilibrium States . 51
4.6 Hydrodynamic Description of Nanometric Electronic Devices 52
5 Concluding Remarks 52

5 J. CAMACHO
EXTENDED THERMODYNAMICS AND TAYLOR DISPERSION **55**
1 Introduction 55
2 Thermodynamics of Taylor Dispersion 57
2.1 Taylor flux components 57
2.2 Entropy Balance and Constitutive Equations 59
2.3 Thermodynamic Functions for Taylor Dispersion . . 62
3 A Macroscale Model for Taylor Dispersion 65
3.1 A Purely Macroscale Model for Taylor Dispersion based in EIT 66
3.2 Comparison with Numerical Simulations 68
4 Concluding Remarks 71

6 L.C. WOODS
HIGHER ORDER TRANSPORT **75**
1 Introduction 75
2 Second-order Entropy 76
2.1 Relaxation Times 76
2.2 Specific Entropy 76
2.3 Generalized Gibbs' Equation 77
2.4 Stability Limit on Knudsen Numbers 78
3 Second-order Heat Flux 80
3.1 Physical Mechanisms 80
3.2 Persistence of the Relative Heat Flux 81
3.3 Final Expression for the Second-Order Heat Flux . . 83
4 Second-order Viscous Stress Tensor 84
4.1 Convection of Viscous Force 84
4.2 Removing the Fluid Acceleration 85
4.3 Viscous Stress due to Heat Flux Gradient 86
4.4 Expression for the Viscous Stress Tensor 87
4.5 Comparison with Kinetic Theory 87
5 Generalized Heat Flux Law 88
5.1 Integral Form for the Heat Flux 88
5.2 Generalized Fourier's Law 89
6 Entropy Production Rate 90
6.1 General Formulae 90
6.2 Sign of the Entropy Production Rate 91
6.3 Can Constitutive Relations Be Deduced From $\sigma \geq 0$? 92
7 Extended Irreversible Thermodynamics 94
7.1 Basic Concepts 94
7.2 Kinetic Theory Precursors of EIT 95
7.3 Contitutive Equations for a One-Component Fluid . 97

7 W. MUSCHIK, H. EHRENTRAUT, C. PAPENFUß AND S. BLENK
MESOSCOPIC THEORY OF LIQUID CRYSTALS **101**
1 Introduction 101
2 Mesoscopic Concept 103
3 Orientational Balances 103
3.1 Global Balances 104
3.2 Local Orientational Balances 105
3.3 Balances of Micropolar Media 106
4 Alignment Tensors 107
5 Remark on Constitutive Equations 108

8 BJARNE ANDRESEN
FINITE-TIME THERMODYNAMICS AND SIMULATED ANNEALING **111**
1 Introduction 111
1.1 Motivation 111
1.2 Early Developments 112
2 Performance Bound Without Path 113
2.1 Generalized Potentials 113
2.2 Thermodynamic Length 116
3 Optimal Path 118
3.1 Optimal Path Calculations 118
3.2 Criteria of Performance 118
4 Simulated Annealing 120
4.1 The Algorithm 120
4.2 The Optimal Annealing Schedule 121
4.3 Parallel Implementation 122
4.4 An Analytic Model 124
5 Summary 125

9 G.H.A. COLE
ENTROPY, INFORMATION AND BIOLOGICAL MATERIALS **129**
1 Introduction 129
2 Life and Information 130
3 Cosmology: the Inanimate Universe 131
4 Conservation of Inanimate Quantities 133
5 Conservation of Information: An Hypothesis 134
6 Summary and Conclusions 135

10 J.S. SHINER AND STANISLAW SIENIUTYCZ
PHENOMENOLOGICAL MACROSCOPIC SYMMETRY IN DISSIPATIVE NONLINEAR SYSTEMS **139**
1 Introduction 139
2 Definitions of Systems Considered: Variables, Forces, Constraints and Equations of Motion 142
2.1 Lagrangian Forces 143
2.2 Dissipative Forces 146
2.3 Conservation Properties 148
2.4 The Equations of Motion 149
3 Independent and Dependent Variables and The Stationary State 150
4 Symmetry 152
5 Discussion 154

11 G.H.A. COLE
THE PROVISION OF GLOBAL ENERGY **159**
1 Introduction 159
2 Present Energy Sources 160
3 The Nature of the Resources 161
4 Thermodynamic Consequences 162
5 Four Basic Sources of Energy 163
6 The Sun as a Source 163
6.1 Direct Collection of Radiation 164
6.2 Photosynthesis 165
6.3 Wind Power 166
6.4 Wave Power 167
6.5 The Hydraulic Resource 168
6.6 Ocean Thermal Power 168
7 Geothermal Energy 168
8 Tidal Power 169
9 Fusion Power 169
10 Comments and Summary 171
10.1 Regenerative Sources 171
10.2 High Density Sources 172
10.3 Conclusion 173

12 P.T. LANDSBERG, A. DE VOS, P. BARUCH AND J.E. PARROTT
MULTIPLE SOURCE PHOTOVOLTAICS **175**
1 Introduction 175
2 Approximately Optimum Work Flux output 177
3 Special Cases 181
4 The Converter Efficiency 182
5 The Shockley-Queisser "Ultimate Efficiency" 185
6 Approximately Optimal Efficiency: A Special Case 186
7 The Solar Cell Equation 187
8 Entropy Generation in a Solar Cell 189
9 Conclusions 190
Appendix I (relevant to Section 2) The Geometrical Factor for $D = 3$ 191
Appendix II (relevant to Sections 2-4) Some Generalisations to D Dimensions of Equations of the Main Text 193

13 S. KJELSTRUP RATKJE AND B. HAFSKJOLD
COUPLED TRANSPORT OF HEAT AND MASS. THEORY AND APPLICATIONS **197**
1 Introduction 197
2 Irreversible Thermodynamic Theory 198
3 Examples of Coupled Transport of Heat and Mass 202
3.1 Frost Heave 202
3.2 Freeze Concentration of Solutions 204
3.3 Bottom Heave in the Aluminium Electrolysis Cell . 206
4 Molecular Dynamics Simulations 208
4.1 Criteria For Local Equilibrium in a Temperature Gradient 209
4.2 The Validity of Onsager Reciprocal Relation 211
4.3 The Heat of Transfer Across Interfaces 212
4.4 Thermal Diffusion in a Two Component Mixture . . 214
5 Conclusion 218

14 J.S. SHINER, S. FASSARI AND STANISLAW SIENIUTYCZ
LAGRANGIAN AND NETWORK FORMULATIONS OF NONLINEAR ELECTROCHEMICAL SYSTEMS **221**
1 Introduction 221
2 A Simple Electrochemical Cell 223
3 More Complicated Reaction Schemes 230
4 An Electrochemical Cell With a More Realistic Electrical Load 235
5 Discussion 237

INDEX **241**
