ELSEVIER

Amsterdam — Oxford — New York — Tokyo 1986

Contents

	List of important symbols	13
1.	Introduction	15
1.1.	The concept of pseudohalogens. Pseudohalides, pseudohalogens	15
1.2.	Nomenclature of pseudohalogen derivatives	16
1.3.	Characteristics of pseudohalides	17
1.4.	Classification of the pseudohalogen compounds — bonding tendencies of the pseudohalides	23
1.5.	References	26
2.	Inorganic azide compounds	28
2.1.	Survey of the binary nitrogen-hydrogen compounds	28
2.2.	Hydrogen azide	28
2.2.1.	Gaseous, liquid and solvent-free HN_3 (azoimide)	28
2.2.2.	Hydrazoic acid	30
2.3.	Analytical and structural properties of the azide group	32
2.3.1.	Bonding properties and structural considerations	32
2.3.2.	Structure of the azide radical and nitrenes	36
2.3.3.	Analytical chemistry of the azide compounds	37
2.4.	Classification of azides	39
2.5.	Azides of the s-elements	39
2.5.1.	Alkali azides	39
2.5.2.	Alkaline-earth azides	41
2.5.3.	Properties of the alkaline-earth and alkali-metal azides	42
2.6.	Azides of the p-elements	46
2.6.1.	Azides of metalloids and semi-metals	46
2.6.2.	Azides of aluminium, gallium, indium and thallium	51
2.6.3.	Tin, lead, antimony and bismuth azides	52
2.7.	Azides of the subgroup elements	53
2.7.1.	Azides of the elements of the subgroups I and II	54
2.7.2.	Azides of the elements of the subgroups III to VII	57
2.7.3.	Azides of the elements of subgroup VIII	59
2.8.	Application of the azides	61
2.9.	References	64
3.	Cyanides	77
3.1.	Preparation and properties of cyanogen	77
3.2.	Hydrogen cyanide	79
3.2.1.	Properties of hydrogen cyanide	79
3.2.2.	Preparation and structure of hydrogen cyanide	80
3.2.3.	Reactions of hydrogen cyanide	81
3.3.	Ammonium, alkali and alkaline-earth cyanides	81
3.3.1.	Preparation of alkali and alkaline-earth cyanides	82
3.3.2.	General properties of ionic cyanides	82

3.4.	Electronic structure and complex formation ability of the cyanide ion	85
3.5.	Cyano compounds of the p- and d ¹⁰ -elements	87
3.5.1.	Binary cyanides	87
3.5.2.	Anionic cyano complexes of the p- and d ¹⁰ -elements	92
3.6.	Cyanides and cyano complexes of the transition metals	96
3.6.1.	Cyano compounds of the metals of subgroup I	97
3.6.1.1.	Metal cyanides	97
3.6.1.2.	Metal cyano complexes	97
3.6.2.	Cyanides of the metals of subgroup III.	103
3.6.2.1.	Cyanides of the lanthanoeides	103
3.6.2.2.	Cyanides of the actinoides	104
3.6.3.	Cyano complexes of the metals of subgroup IV	105
3.6.4.	Cyanides of the metals of subgroup V	105
3.6.5.	Cyano compounds of the metals of subgroup VI	108
3.6.6.	Cyano compounds of the metals of subgroup VII	113
3.6.7.	Cyano compounds of the metals of the iron group	117
3.6.7.1.	Binary metal cyanides	117
3.6.7.2.	Cyano complexes	118
3.6.8.	Cyano compounds of the platinum metals	130
3.6.8.1.	Binary metal cyanides	130
3.6.8.2.	Cyano complexes	130
3.7.	Formation of cyano complexes in non-aqueous media	135
3.7.1.	Cyano complexes of the metals of subgroups I and II	135
3.7.2.	Cyano complexes of the metals of the iron group	139
3.7.3.	Investigation of metalloid cyanides	139
3.7.4.	Investigation of cyano complexes in salt melts	140
3.8.	Structural analysis of cyano complexes	142
3.8.1.	Use of vibrational spectroscopy in the structural analysis of the cyanide complexes	142
3.8.2.	NMR-spectroscopic investigations of cyano complexes	147
3.8.3.	X-ray structural analyses of the cyano complexes	147
3.9.	Application of cyano compounds	155
3.9.1.	Technical importance of covalent cyano compounds	155
3.9.2.	Metal cyanides in the industry	161
3.9.3.	Industrial application of cyano complexes	161
3.9.4.	Cyanides in chemical analysis	162
3.9.5.	Problems of cyanide disposal	163
3.10.	References	164
4.	Cyanates and Fulminates	186
4.1.	Dioxycyanogen, (OCN) ₂	186
4.2.	Isocyanic acid, structure and properties	187
4.3.	Preparation and properties of ionic alkali, ammonium, and alkaline-earth cyanates	188
4.4.	Isocyanates of the elements of the main groups III to VII	190
4.5.	Cyanates of the d- and f-metals	195
4.6.	Fulminic acid	196
4.7.	Metal fulminates	197
4.8.	Structure and coordination tendency of the cyanate and fulminate ions	198
4.9.	Cyanate and isocyanate complexes	200
4.9.1.	Anionic compounds	200
4.9.2.	Metal cyanate complexes with other ligands	202
4.9.3.	Reactions of the isocyanate complexes	207
4.10.	Fulminate complexes	208
4.11.	Structural analysis of cyanate and fulminate compounds	212
4.11.1.	X-ray structural analyses	212

4.11.2.	IR-spectroscopic investigations	217
4.11.2.1.	IR-spectroscopic investigations of cyanate derivatives	218
4.11.2.2.	IR-spectroscopic investigations of metal fulminates	223
4.11.3.	NMR investigations of cyanate and fulminate complexes	227
4.12.	Application of the cyanates and fulminates	228
4.13.	References	230
5.	Thiocyanate compounds	239
5.1.	Preparation and properties of dithiocyanogen	239
5.2.	Hydrogen isothiocyanate and isothiocyanic acid	241
5.3.	Thiocyanates of the s-metals and of ammonium	242
5.4.	Preparation and properties of the thiocyanate compounds of the p- and d ¹⁰ -elements	244
5.4.1.	Thiocyanates of metals of subgroup II	244
5.4.2.	Thiocyanates of the elements of main group III	248
5.4.3.	Thiocyanates of the elements of main group IV	250
5.4.4.	Thiocyanates of the elements of main groups V to VII	253
5.5.	Thiocyanates of the transition metals	255
5.5.1.	Thiocyanates of the metals of subgroup I.	255
5.5.2.	Thiocyanates of the rare-earth metals	259
5.5.3.	Thiocyanates of the actinoides.	261
5.5.4.	Thiocyanates of the metals of subgroup IV	262
5.5.5.	Thiocyanates of the metals of subgroup V	263
5.5.6.	Thiocyanates of the metals of subgroup VI	265
5.5.7.	Thiocyanates of the metals of subgroup VII	267
5.5.8.	Thiocyanates of the metals of the iron group	270
5.5.9.	Thiocyanates of the platinum metals.	275
5.6.	Characteristics of the complexing behaviour of the thiocyanate ion	276
5.7.	IR-spectroscopic investigations and X-ray structural analyses of thiocyanate compounds	279
5.7.1.	IR-spectroscopic investigations	279
5.7.2.	Inversion of the coordination of the SCN group	293
5.7.3.	X-ray structural analyses.	298
5.8.	Application of inorganic thiocyanates	322
5.8.1.	Thiocyanates in chemical synthesis	322
5.8.2.	Thiocyanates in chemical analysis	323
5.8.3.	Industrial applications of the thiocyanates	325
5.8.4.	Environmental protection, biochemistry and medicine	327
5.9.	References	328
6.	Selenocyanate compounds	364
6.1.	Diselenocyanogen and its properties	364
6.2.	Analytics of the selenocyanate ion	365
6.3.	Isoselenocyanic acid and its salts	365
6.4.	Selenocyanates of the p- and d ¹⁰ -metals	369
6.5.	Investigation of selenocyanate complexes in solution	370
6.5.1.	Complex formation in aqueous and mixed solution.	370
6.5.2.	Methanolic solutions	372
6.5.3.	Dimethylformamide solutions	373
6.5.4.	Dimethylsulfoxide solutions.	374
6.5.5.	Acetone solutions	374
6.5.6.	Solutions in acetonitrile	376
6.5.7.	Influence of the solvent on the complexing reaction of selenocyanate.	376
6.6.	Coordination types of the selenocyanate ligand	377
6.7.	Coordination compounds of metal selenocyanates with amines.	378
6.7.1.	Compounds with pyridine and its derivatives	378

6.7.2.	Compounds containing dipyridyl and phenanthroline	380
6.7.3.	Selenocyanate complexes with other amines	385
6.8.	Complexes with O-donor neutral ligands	386
6.8.1.	Compounds containing dimethyl sulfoxide and dimethyl formaldehyde	387
6.8.2.	Compounds containing hexamethyl phosphorus triamide	389
6.8.3.	Other selenocyanate complexes	391
6.9.	Organometal selenocyanates and phosphine complexes of metal selenocyanates	393
6.10.	Anionic selenocyanate complexes	394
6.10.1.	Synthesis of the compounds	394
6.10.2.	Anionic complexes with bridging SeCN groups	397
6.10.3.	Anionic selenocyanate complexes	399
6.10.4.	Anionic isoselenocyanate complexes	401
6.10.5.	Mixed pseudohalogenometallates	404
6.11.	References	406
7.	Tricyanomethanides	413
7.1.	The pseudohalide character of the tricyanomethanide ion	413
7.2.	Properties and structure of the tricyanomethanide ion	414
7.3.	Bond types of the tricyanomethanides and methods of their analysis	416
7.4.	Covalent tricyanomethanides of the main group elements	419
7.4.1.	Dicyanketenimine, HNCC(CN) ₂	419
7.4.2.	Halogenotricyanomethanes	420
7.4.3.	Organometal tricyanomethanides	421
7.5.	Tricyanomethanides of the d- and f-metals	424
7.6.	Transition-metal tricyanomethanide complexes with other ligands	427
7.6.1.	Complexes with N- and O-donor molecules	427
7.6.2.	Complexes with C- and P-ligand molecules	430
7.7.	References	432
8.	Dicyanamides	434
8.1.	The pseudohalide character of the dicyanamide ion	434
8.2.	Properties and structure of the dicyanamide ion	436
8.3.	Bond types and methods of their analysis	437
8.4.	Dicyanamides of the p-elements	441
8.5.	Dicyanamides of the d-metals	444
8.6.	Dicyanamide complexes of the d- and f-metals	447
8.6.1.	Complex formation in solution	447
8.6.2.	Anionic complexes	447
8.6.3.	Dicyanamide complexes with other ligands	450
8.7.	References	453
9.	Comparative characterization of the pseudohalides	455
9.1.	Acidity and structure of the hydropseudohalic acids	455
9.2.	Solubility of metal pseudohalides and metal halides	457
9.3.	Ligand characteristics and donor activity of the pseudohalides	459
9.4.	Mixed complexes of linear and non-linear pseudohalides	463
9.5.	Further possibilities and tendencies in the chemistry of the pseudohalides	465
9.6.	References	469
	List of frequently used abbreviations	472
