Preface	xvi
Acknowledgments	xxii

Part 1	Foundation	1
Chapter 1.	Introduction to Open Distributed Systems and the Client/Server Model	3
1.1	EVOLUTION	4
1.1.1	Host-Based Processing	4
1.1.2	Master-Slave Processing	5
1.1.3	First-Generation Client/Server Processing	5
1.1.4	Peer-to-Peer Processing	9
1.1.5	Second-Generation Client/Server Processing	10
1.2	PARADIGM SHIFT	11
1.2.1	Computing Paradigm	13
1.2.2	Business Paradigm	14
1.2.3	Advantages of Client/Server Computing	15
1.3	STANDARDS AND OPEN SYSTEMS	17
1.3.1	Open Systems	18
1.3.2	Beneficiaries of Open Systems	20
1.4	OSF DISTRIBUTED COMPUTING ENVIRONMENT	22
1.4.1	DCE Architecture	22
1.4.2	Distributed File System (DFS)	23
1.4.3	Directory Service	25
1.4.4	Remote Procedure Calls	26
1.4.5	Threads Services	26
1.4.6	Time Services	27
1.4.7	The Result—DCE Client/Server Model	27
1.5	CORBA	28
1.6	THE COMPLETE PICTURE—A NEW GENERATION OF THE CLIENT/SERVER COMPUTING MODEL	32
1.7	SUMMARY	33

Chapter 2. Approach to Distribution	35
2.1 DISTRIBUTED MODELS	36
2.1.1 Cooperative Client/Server Processing	36
2.1.2 Application Components Distribution Points	41
2.2 MULTITIERED ENVIRONMENTS	44
2.2.1 Two-Tiered Model	45
2.2.2 Platform-Based Multitiered Model	46
2.2.3 Second-Generation Multitiered Client/Server Models	48
2.3 SINGLE SYSTEM IMAGE	53
2.4 PRESENTATION DISTRIBUTION	54
2.4.1 Distributed Presentation	56
2.4.2 Remote Presentation	57
2.5 DISTRIBUTED PROCESSING	58
2.5.1 Distributed Functions	59
2.5.2 Transactions and Distributed Transaction Processing	61
2.6 DATA DISTRIBUTION	62
2.6.1 Distributed Data and Data Management Architecture	63
2.6.2 Remote Data Management	65
2.6.3 Distributed Data Management	67
Part 2 Client and Server Specialization in the Distributed Environment	71
Chapter 3. Client Specialization in the Client/Server Environment	73
3.1 CLIENT'S ROLE AND FUNCTIONS	74
3.2 PRESENTATION MANAGEMENT AND GUI	75
3.2.1 General Requirements for Standard GUI	76
3.2.2 GUI Features	77
3.3 X WINDOWS SYSTEM	81
3.4 OSF/MOTIF	84
3.5 MS WINDOWS	86
3.5.1 Windows Open Services Architecture (WOSA)	87
3.5.2 Windows Clipboard, DDE, and OLE	90
3.5.3 Windows 95	94
3.6 GUI PORTABILITY	94
3.7 APPLICATION DEVELOPMENT	96
Chapter 4. Server Specialization in the Client/Server Environment	99
4.1 SERVER FUNCTIONS	100
4.2 SERVER HARDWARE ARCHITECTURE	106
4.2.1 System Considerations	106
4.2.2 RISC versus CISC	108
4.3 MULTIPROCESSOR SYSTEMS	111
4.3.1 SMP Design	113
4.3.2 SMP Features	115
4.3.3 SMP Implementations	117
4.4 MASSIVELY PARALLEL PROCESSORS AND CLUSTER SYSTEMS	118
4.4.1 Distributed-Memory Architecture	119

4.4.2	Research Issues	122
4.4.3	Clustered Systems	124
4.5	SERVER OPERATING SYSTEMS	126
4.5.1	Requirements	126
4.5.2	UNIX	128
4.5.3	Windows/NT	129
4.5.4	OS/2	129
4.5.5	NetWare	130
4.5.6	OS Summary	131
Part 3	Networking, Communications, and Middleware	133
Chapter 5.	Communication Systems	135
5.1	COMMUNICATION AND DISTRIBUTION	135
5.2	COMMUNICATION SYSTEM FUNCTIONS	136
5.3	LAYERS, PROTOCOLS, AND INTERFACES	139
5.4	ISO REFERENCE MODEL	142
5.4.1	OSI Physical Layer	143
5.4.2	OSI Data Link Layer	143
5.4.3	OSI Network Layer	144
5.4.4	OSI Transport Layer	144
5.4.5	OSI Session Layer	145
5.4.6	OSI Presentation Layer	145
5.4.7	OSI Application Layer	145
5.5	CLIENT/SERVER COMPONENTS CONNECTIVITY	146
5.5.1	Communication and Synchronization	146
5.5.2	Procedure-Oriented Communication—RPC	147
5.6	NETWORKS	149
5.6.1	Classification	150
5.6.2	Topology	151
5.6.3	Network Switching Techniques	154
Chapter 6.	Local Area Networking	157
6.1	LOCAL AREA NETWORK CONCEPTS	157
6.1.1	LAN, WAN, and MAN	158
6.1.2	LAN Characteristics and Components	159
6.2	TRANSMISSION AND ACCESS CONTROL METHODS	160
6.2.1	Transmission Medium	160
6.2.2	Transmission Techniques	162
6.2.3	Transmission Control	163
6.3	IEEE 802 ARCHITECTURE	165
6.3.1	LAN Standards and IEEE Project 802	165
6.3.2	IEEE 802.2: Logical Link Control Layer	166
6.3.3	Media Access Control Layers and IEEE 802.3	167
6.3.4	Ethernet	168
6.3.5	IEEE 802.4: Token-Bus Standard	168
6.3.6	IEEE 802.5: Token-Ring Standard	169
6.4	INTER-LAN CONNECTIVITY	170
6.4.1	Repeaters	170
6.4.2	Bridges	171
6.4.3	Routers	171

6.4.4	Gateways	171
6.4.5	Intelligent Hubs	171
6.5	HIGH-SPEED LAN	173
6.5.1	FDDI	174
6.5.2	100-Mbps Ethernet	174
6.5.3	Asynchronous Transfer Mode (ATM)	175
6.6	LAN-WAN INTERCONNECTION	175
6.7	WIRELESS LAN	178
6.7.1	Microwave	178
6.7.2	Infrared	179
6.7.3	Satellite	179
6.7.4	Spread-Spectrum	180
6.8	CONCLUSION	180
Chapter 7.	TCP/IP and SNA	181
7.1	TRANSMISSION CONTROL PROTOCOL/INTERNET PROTOCOL (TCP/IP)	181
7.1.1	TCP/IP Internetworking	182
7.1.2	TCP/IP Protocols	182
7.1.3	Addressing, sockets, and sequencing	183
7.1.4	Internet Services	185
7.2	SNA COMPONENTS, LAYERS, AND FUNCTIONS	188
7.2.1	Components	189
7.2.2	Seven SNA Layers	190
7.2.3	SNA and OSI	194
7.3	ADVANCED PROGRAM-TO-PROGRAM COMMUNICATIONS OVERVIEW	195
7.3.1	APPC Design Objectives	195
7.3.2	Transaction Programs and Distributed Transaction Processing	197
7.3.3	LU6.2 Protocol Boundaries and Components	200
7.3.4	APPC/LU6.2 Conversations and States	201
7.3.5	APPC/LU6.2 Sessions	203
Chapter 8.	Client/Server and Middleware	207
8.1	MIDDLEWARE—A NEW CLASS OF SOFTWARE	207
8.1.1	Definition and Functionality	209
8.1.2	Forces That Drive Middleware	211
8.1.3	Middleware Computing Models	212
8.2	MIDDLEWARE TECHNIQUES	215
8.2.1	RPC	216
8.2.2	Messaging and Queuing	219
8.2.3	Message Queuing and E-Mail	222
8.2.4	RPC versus Messaging	222
8.2.5	Data Management Middleware	223
8.2.6	Distributed TP Managers	225
8.3	MIDDLEWARE AND EMERGING STANDARDS	227
8.4	MAJOR VENDOR'S MIDDLEWARE STRATEGIES	229
8.4.1	IBM	229
8.4.2	Microsoft	231
8.4.3	Digital	235
8.4.4	Others	236
8.5	MIDDLEWARE BENEFITS	237

Part 4 Cooperative Processing and Data Management in Client/Server Environments	239
Chapter 9. Distributed Data Management	241
9.1 WHY DATA DISTRIBUTION?	242
9.2 RELATIONAL DATA MODEL	243
9.2.1 Evolution of SQL	246
9.3 METHODS OF DATA DISTRIBUTION	247
9.3.1 Manual Extract	247
9.3.2 Snapshot	249
9.3.3 Replication	250
9.3.4 Fragmentation	251
9.4 DISTRIBUTED DATA LOCATION ANALYSIS	253
9.5 DISTRIBUTED DATA ACCESS	256
9.5.1 Remote Request	256
9.5.2 Remote Transaction	257
9.5.3 Distributed Transaction	259
9.5.4 Distributed Request	260
9.6 DATABASE TRANSACTION MANAGEMENT	263
9.6.1 Database Transactions	263
9.6.2 Two-Phase Commit Protocol	265
9.6.3 Distributed Two-Phase Commit	267
Chapter 10. Designing a Distributed Data Management System	269
10.1 DISTRIBUTED DATA DICTIONARY	269
10.2 C. J. DATE'S RULES AND DISTRIBUTED DATA MANAGEMENT ISSUES	272
10.2.1 Rule 1—Local Autonomy	272
10.2.2 Rule 2—No Reliance on a Central Site	274
10.2.3 Rule 3—Continuous Operations	275
10.2.4 Rule 4—Data Location Independence	275
10.2.5 Rule 5—Data Fragmentation Independence	277
10.2.6 Rule 6—Data Replication Independence	279
10.2.7 Rule 7—Distributed Query Processing	281
10.2.8 Rule 8—Distributed Transaction Management	285
10.2.9 Hardware, Software, Networks, and DBMS Independence	286
10.3 OTHER DISTRIBUTED DATA MANAGEMENT ISSUES	289
10.3.1 Administration	289
10.3.2 Security	290
10.3.3 Currency Control	291
Chapter 11. Data Distribution and Data Replication	293
11.1 DATA DISTRIBUTION ARCHITECTURES	293
11.2 DRDA	294
11.2.1 DRDA Overview	295
11.2.2 DRDA and DDM	300
11.2.3 DRDA Processing Model	307
11.3 OVERVIEW OF DATA REPLICATION	310
11.3.1 History of Data Replication	311
11.3.2 Replication Technology and Architecture	311
11.4 REPLICATION SYSTEM REQUIREMENTS	316

11.5	REPLICATION BENEFITS	317
11.6	IMPLEMENTATION EXAMPLES	318
11.6.1	SYBASE Replication Server	318
11.6.2	IBM Data Propagator	319
11.6.3	ORACLE Symmetric Replication	320
11.6.4	Microsoft SQL Server Replication	321
11.6.5	Others	322
Chapter 12. DBMS Architecture and Implementations for the Client/Server Environment		323
12.1	IMPLEMENTATION TRENDS AND FEATURES OF CLIENT/SERVER DISTRIBUTED DBMS	324
12.1.1	Relational DBMS Architecture for Scalability	326
12.1.2	RDBMS Performance and Efficiency Features	329
12.1.3	DBMS Connectivity	339
12.1.4	Advanced RDBMS Features	341
12.2	RDBMS RELIABILITY AND AVAILABILITY	344
12.2.1	Robustness, Transactions Recovery, and Consistency	344
12.2.2	RDBMS Administration	346
12.3	CLIENT/SERVER RDBMS SOLUTIONS	348
12.3.1	SYBASE	348
12.3.2	ORACLE	352
12.3.3	INFORMIX	354
12.3.4	CA/Ingres	355
12.3.5	IBM	357
12.3.6	Microsoft	361
Part 5 Transaction and Systems Management in Client/Server Environments		365
Chapter 13. Distributed Transaction Processing		367
13.1	DTP CONCEPTS	368
13.1.1	Transactions	368
13.1.2	TP Monitors	368
13.1.3	Distributed Transaction Processing	370
13.2	X/OPEN DISTRIBUTED TRANSACTION PROCESSING MODEL	373
13.3	OVERVIEW OF CICS	374
13.3.1	CICS Intercommunication Methods	375
13.3.2	CICS Intercommunication Facilities	376
13.3.3	Front-End and Back-End Transactions	378
13.3.4	Syncpoints	380
13.3.5	CICS Distributed Two-Phase Commit	383
13.4	TRANSACTION MANAGEMENT SOLUTIONS	384
13.4.1	TUXEDO Overview	384
13.4.2	TUXEDO Architecture	385
13.4.3	TUXEDO Distributed Transaction Management	387
13.5	ENCINA	389
13.5.1	Encina Architecture and Components	389
13.5.2	Encina Monitor Features	392

13.6	TOP END	395
13.6.1	TOP END Features	395
13.6.2	TOP END Components	396
Chapter 14. Systems Management in a Client/Server Computing Environment		399
14.1	SYSTEMS MANAGEMENT	400
14.1.1	Overview of Distributed Systems Management	400
14.1.2	Complexity Management	401
14.2	DEFINITION AND SCOPE OF DISTRIBUTED SYSTEMS MANAGEMENT	403
14.3	DISTRIBUTED SYSTEMS MANAGEMENT FUNCTIONS	404
14.4	SYSTEMS MANAGEMENT MECHANISMS	406
14.5	DISTRIBUTED SYSTEMS MANAGEMENT REQUIREMENTS AND FRAMEWORK	408
14.6	SOFTWARE DISTRIBUTION REQUIREMENTS	410
14.7	REMOTE DATABASE MANAGEMENT	413
14.7.1	Database Systems Management Examples	414
14.8	SYSTEMS MANAGEMENT SOLUTIONS	416
14.8.1	Microsoft Systems Management Server	416
14.8.2	The Tivoli Management Environment	417
14.8.3	Other Systems Management Tools	419
14.9	NETWORK MANAGEMENT	422
14.9.1	IBM SystemView	424
14.10	WORKFLOW MANAGEMENT	425
14.10.1	Workflow Management Overview	425
14.10.2	Workflow Architectures	427
Part 6 Client/Server—Mature Architecture		429
Chapter 15. Data Warehousing		431
15.1	THE NEED FOR DATA WAREHOUSING	432
15.2	OPERATIONAL AND INFORMATIONAL DATA STORES	433
15.3	DEFINITION AND CHARACTERISTICS OF DATA WAREHOUSE	435
15.4	DATA WAREHOUSE ARCHITECTURE AND COMPONENTS	438
15.4.1	Data Warehouse Components	438
15.4.2	Data Warehouse Access and Client/Server Architecture	443
15.5	BUILDING A DATA WAREHOUSE	444
15.5.1	Approach	444
15.5.2	Organizational Issues	445
15.6	DESIGN CONSIDERATIONS	445
15.6.1	Data Content	446
15.6.2	Metadata	446
15.6.3	Data Distribution	447
15.6.4	Tools	447
15.6.5	Performance Considerations	448
15.7	TECHNICAL CONSIDERATIONS	448
15.7.1	Hardware Platforms	449
15.7.2	Data Warehouse and DBMS Specialization	450
15.7.3	Communications Infrastructure	451

15.8	IMPLEMENTATION CONSIDERATIONS	451
15.8.1	Access Tools	452
15.8.2	Data Extraction, Cleanup, Transformation, and Migration	453
15.8.3	Data Placement Strategies	455
15.8.4	Metadata	456
15.8.5	User Sophistication Levels	457
15.8.6	Integrated Solutions	458
15.9	BENEFITS OF DATA WAREHOUSING	460
15.9.1	Tangible Benefits	461
15.9.2	Intangible Benefits	461

Chapter 16. Technology and Advanced Applications of Data Warehousing **463**

16.1	RELATIONAL DATABASE TECHNOLOGY FOR DATA WAREHOUSING	463
16.1.1	Types of Parallelism	464
16.1.2	Data Partitioning	465
16.2	DATABASE ARCHITECTURES FOR PARALLEL PROCESSING	467
16.2.1	Shared-Memory Architectures	467
16.2.2	Shared-Disk Architecture	468
16.2.3	Shared-Nothing Architecture	468
16.2.4	Combined Architecture	470
16.3	PARALLEL RDBMS FEATURES	471
16.4	ALTERNATIVE TECHNOLOGIES	472
16.4.1	Advanced Indexing Techniques	473
16.5	PARALLEL DBMS VENDORS	473
16.5.1	Oracle	473
16.5.2	Informix	475
16.5.3	IBM	476
16.5.4	Sybase	477
16.5.5	Other RDBMS Products	479
16.5.6	Specialized Database Products	480
16.6	ON-LINE ANALYTICAL PROCESSING AND MULTIDIMENSIONAL DATABASES	481
16.6.1	The Need for OLAP	481
16.6.2	Multidimensional Data Model	483
16.6.3	OLAP Guidelines	484
16.6.4	Multidimensional vs. Relational	486
16.6.5	Alternative Approach	488
16.6.6	OLAP Tools	488
16.7	DATA MINING	489
16.7.1	Data Mining Definition and Drivers	489
16.7.2	Data Mining Methodology	491
16.7.3	Data Mining Techniques	492
16.7.4	Applications of Data Mining	497
16.7.5	Data Visualization	498
16.7.6	Criteria for Data Mining and Visualization Tools	500

Chapter 17. Client/Server Computing—Architecture for Today and Tomorrow **503**

17.1	CLIENT/SERVER APPLICATION DEVELOPMENT	504
17.1.1	PowerBuilder	505
17.1.2	SQL Windows	510

17.1.3 Forté	512
17.1.4 Others	514
17.2 APPLICATION TESTING	515
17.3 PUTTING IT ALL TOGETHER	517
17.3.1 Data Access Services Architecture for DSS and OLTP Applications	518
17.3.2 Common Services—Data Access Middleware	519
17.4 CLIENT/SERVER COSTS	522
17.5 BENEFITS AND ADVANTAGES OF CLIENT/SERVER COMPUTING	524
17.6 WHAT IS NEXT?	526
Appendix A. Glossary	529
Appendix B. C. J. Date's 12 Distributed DBMS Rules	545
Appendix C. E. F. Codd's 12 Guidelines for OLAP	549
Appendix D. 10 Mistakes for Data Warehousing Managers to Avoid	551
Appendix E. Suggested Publications	559
Appendix F. Acronyms	561
Index	567
