Elements *of* Hypermedia Design

Techniques for Navigation & Visualization in Cyberspace

Peter Gloor

Birkhäuser

Boston • Basel • Berlin

of Table Contents

Part I Structuring Information 2

Chapter 1 A Brief Introduction to Information Retrieval 5

1.1 Classification of Retrieval Techniques 6

1.2 Text Retrieval Using Inverted Indexing 8

1.3 Automatic Indexing 9

1.4 The Vector Space Model 11

1.5 Document Clustering 12

1.6 Rule-based Expert Systems for Information Retrieval 14

1.7 Hypermedia and Information Retrieval 15

Chapter 2 User Modeling 19

2.1 Classifications and Taxonomy 19

2.2 User Modeling in UC, the UNIX Consultant 20

2.3 User Modeling in Information Retrieval 22

2.4 User Modeling in I3R 24

Chapter 3 World Wide Web: an Introduction 29

3.1 WWW Overview 30

3.2 Basic WWW Navigation Mechanisms 33

3.3 Hyper-G 34

Chapter 4 Programming the Web 43

4.1 CGI (Common Gateway Interface) 43

4.2 Java 45

4.3 JavaScript 45

4.4 Tcl 46

4.5 General Magic Telescript 47

Chapter 5	The Seven Design Concepts for Navigation in Cyberspace	49
Chapter 6	Linking	55
	6.1 Static Versus Dynamic Linking	57
	6.2 MICROCOSM: A System Based on Dynamic Linking	58
	6.3 Automatic Link Generation: The Link Apprentice	59
	6.4 Breadcrumbs and Bookmarks	60
Chapter 7	Searching	63
	7.1 WAIS	63
	7.2 SWISH	66
	7.3 Robots	68
	7.4 Harvest	69
Chapter 8	Sequentialization	71
	8.1 Guided Tours and Travel Holidays	72
	8.2 Guided Tours and Tabletops in NoteCards	72
	8.3 Scripted Paths	74
	8.4 Footsteps	78
Chapter 9	Hierarchy	81
	9.1 Electronic Table of Contents	81
	9.2 IGD: Hierarchical Display of Hypertext Structure	82
	9.3 Tree-Maps: Visualization of Hierarchical Information Structure	85
	9.4 Multitrees	86
	9.5 Zooming into Hierarchically Structured Information	87
	9.6 SuperBook: Automatically Structured Documents	88
Chaper 10	Similarity	91
	10.1 Electronic Index: Similarity by Common Key Words	92
	10.2 Semnet: A Test Bed for Three-Dimensional Knowledge Base Representation	92
	10.3 The CYC Browser	95
	10.4 VISAR: Navigation by Inference	99
Chapter 11	Mapping	101
	11.1 Intermedia Web View	103
	11.2 Fish–Eye Views	107
	11.3 Graph-based Fish–Eye Views	110

11.4 XEROX Information Visualizer 114
11.5 Mapping the Web 117
Chapter 12 Guides and Agents 125
12.1 Guides: Orientation Assistants 126
12.2 Agents 130
12.3 Oval: A Tool Kit to Build Information Exploration Interfaces 134
Chapter 13 Conclusions 137

Part II The Cyber-Toolbox 140

Chapter 14 Cybertools from Text To Hypertext 143
14.1 Hierarchical Navigation with the Gloor/Dynes Hypertext Engine 143
14.2 Webs 146
14.3 Guided Tour Through the Gloor/Dynes Hypertext Engine 147
14.4 Conversion to Hypertext 149
14.4 Conversion to Hypertext 150
Chapter 15 Cybertools: Hierarchy with Hiermap, Viewfinder, and Navigation Diamond 153
15.1 The Navigation Diamond 153
15.2 Viewfinder 154
15.3 Hiermap 155
Chapter 16 Cybertools: Sequentialization with Paths 157
Chapter 17 Cybertools: Similarity with Cybermap 163
17.1 Motivation 164
17.2 Why Overview Maps? 165
17.3 The Ideal Cybermap 166
Chapter 18 Cybermap: System Architecture 171
18.1 Identification of Hyperdrawers 171
18.2 The Model of the User 173
18.3 Application Structure 174
18.4 Preprocessing 175
18.5 Analysis of Structure and Contents of the Document 176
18.6 Computing the Similarity Between Nodes 178
18.7 Dynamic Linking with Cybermap 179

Chapter 19 Cybermap: Implementation Issues 183
19.1 Implementing Cybermap on the Connection Machine 184
19.2 Enabling Cybermap for the Web 186
19.3 Implementing Cybermap for the Web 188
19.4 Evolution of the Cybermap GUI 189
19.5 A Sample Guided Tour 193
19.6 Cybermaps for Multimedia Data 196
Chapter 20 Building Hierarchical Cybermaps 203
20.1 Hierarchical Clustering Algorithms 203
20.2 Hierarchical Cybermap Example: News Selection 204
Chapter 21 Cybertrees:Tree-Shaped Overview Maps 209
21.1 Cybertree Algorithms 209
21.2 Comparison between Cybermap and Cybertree 211
21.3 Cybertree Examples 213
21.4 Possible Extensions 220
Chapter 22 Conclusions 223

Part III Visualization 226

Chapter 23 Introduction to Algorithm Animation 229
Chapter 24 Animated Algorithms 235
24.1 System Overview 235
24.2 Project Goals 237
24.3 The Animation System 239
Chapter 25 User Interface Design for Algorithm Animation 243
Chapter 26 Educational Aspects 251
26.1 Educational Benefits of Algorithm Animation 251
26.2 Structure-Based Algorithm Animation 253
26.3 Find "the Best" Pseudocode 255
Chapter 27 Animating Proofs 257
27.1 Components of the Proof Visualization System 258
27.2 Master Teaching 259

Chapter 28 The Art of Algorithm Animation 263
28.1 How to Animate Algorithms 263
28.2 Requirements of the Algorithm Animator 267
28.3 Automatic Algorithm Animation 268
Chapter 29 Algorithm Animation by Scripting 271
Chapter 30 Conclusions 277

Part IV Multimedia Editing 280

Chapter 31 Introduction 283
Chapter 32 Related Work 287
Chapter 33 VideoScheme System Overview 291
Chapter 34 VideoScheme Language Overview 295
Chapter 35 VideoScheme Applications 297
35.1 Automating Repetitive Tasks 297
35.2 Authoring with Programming 300
35.3 Cut Detection 301
35.4 Automatic Video Analysis 307
Chapter 36 Conclusions 309

Part V Hypermedia Publishing 312

Chapter 37 Introduction 315
37.1 Related Work 317
37.2 Background 319
Chapter 38 DAGS '92: CD-ROM 321
38.1 System Description 321
38.2 DAGS '92 Sample Guided Tour 322
38.3 DAGS '93: CD-ROM 327
Chapter 39 DAGS '95: On the Web 331
39.1 System Description 331
39.2 DAGS '95 Sample Guided Tour 333
Chapter 40 The Development Process 341
40.1 Producing Digital Talks for CD-ROM 341
40.2 Producing Digital Talks for the Web 344

40.3 Automation of the Development Process 346
40.4 Producing the Hypertext for CD-ROM 349
40.5 Producing the Hypertext for the Web 350
Chapter 41 Extensions and Improvements 353
41.1 Obstacles in the Creation of Digital Talks 353
41.2 Improving the Development Process 355
41.3 CD-ROM versus WWW 356
41.4 Improving the Product Design 357
Chapter 42 Conclusions 361
Glossary 363
