Editor

Introduction to Nonlinear Physics

With 264 Figures

Springer

Contents

| | |
|-------------------------|----------|
| Preface | v |
| 1 Introduction | 1 |
| <i>Lui Lam</i> | |
| 1.1 A Quiet Revolution | 1 |
| 1.2 Nonlinearity | 2 |
| 1.3 Nonlinear Science | 4 |
| 1.3.1 Fractals | 4 |
| 1.3.2 Chaos | 5 |
| 1.3.3 Pattern Formation | 6 |
| 1.3.4 Solitons | 6 |
| 1.3.5 Cellular Automata | 7 |
| 1.3.6 Complex Systems | 8 |
| 1.4 Remarks | 9 |
| References | 10 |

Part I Fractals and Multifractals

| | |
|---|-----------|
| 2 Fractals and Diffusive Growth | 15 |
| <i>Thomas C. Halsey</i> | |
| 2.1 Percolation | 16 |
| 2.2 Diffusion-Limited Aggregation | 17 |
| 2.3 Electrostatic Analogy | 20 |
| 2.4 Physical Applications of DLA | 22 |
| 2.4.1 Electrodeposition with Secondary Current Distribution | 24 |
| 2.4.2 Diffusive Electrodeposition | 27 |
| Problems | 28 |
| References | 28 |

| | | |
|----------|--|-----------|
| 3 | Multifractality | 30 |
| | <i>Thomas C. Halsey</i> | |
| 3.1 | Definition of $\tau(q)$ and $f(\alpha)$ | 30 |
| 3.2 | Systematic Definition of $\tau(q)$ | 32 |
| 3.3 | The Two-Scale Cantor Set | 33 |
| 3.3.1 | Limiting Cases | 35 |
| 3.3.2 | Stirling Formula and $f(\alpha)$ | 36 |
| 3.4 | Multifractal Correlations | 37 |
| 3.4.1 | Operator Product Expansion and Multifractality | 38 |
| 3.4.2 | Correlations of Iso- α Sets | 39 |
| 3.5 | Numerical Measurements of $f(\alpha)$ | 40 |
| 3.6 | Ensemble Averaging and $\tau(q)$ | 41 |
| | Problems | 42 |
| | References | 43 |
| 4 | Scaling Arguments and Diffusive Growth | 44 |
| | <i>Thomas C. Halsey</i> | |
| 4.1 | The Information Dimension | 44 |
| 4.2 | The Turkevich–Scher Scaling Relation | 45 |
| 4.3 | The Electrostatic Scaling Relation | 47 |
| 4.4 | Scaling of Negative Moments | 50 |
| 4.5 | Conclusions | 51 |
| | Problems | 52 |
| | References | 52 |

Part II Chaos and Randomness

| | | |
|----------|---|-----------|
| 5 | Introduction to Dynamical Systems | 55 |
| | <i>Stephen G. Eubank and J. Doyne Farmer</i> | |
| 5.1 | Introduction | 55 |
| 5.2 | Determinism Versus Random Processes | 55 |
| 5.3 | Scope of Part II | 57 |
| 5.4 | Deterministic Dynamical Systems and State Space | 58 |
| 5.5 | Classification | 61 |
| 5.5.1 | Properties of Dynamical Systems | 61 |
| 5.5.2 | A Brief Taxonomy of Dynamical Systems Models | 63 |
| 5.5.3 | The Relationship Between Maps and Flows | 63 |
| 5.6 | Dissipative Versus Conservative Dynamical Systems | 67 |
| 5.7 | Stability | 68 |
| 5.7.1 | Linearization | 68 |
| 5.7.2 | The Spectrum of Lyapunov Exponents | 70 |
| 5.7.3 | Invariant Sets | 71 |
| 5.7.4 | Attractors | 73 |

| | | |
|----------|---|------------|
| 5.7.5 | Regular Attractors | 75 |
| 5.7.6 | Review of Stability | 82 |
| 5.8 | Bifurcations | 82 |
| 5.9 | Chaos | 89 |
| 5.9.1 | Binary Shift Map | 90 |
| 5.9.2 | Chaos in Flows | 92 |
| 5.9.3 | The Rössler Attractor | 94 |
| 5.9.4 | The Lorenz Attractor | 97 |
| 5.9.5 | Stable and Unstable Manifolds | 98 |
| 5.10 | Homoclinic Tangle | 100 |
| 5.10.1 | Chaos in Higher Dimensions | 101 |
| 5.10.2 | Bifurcations Between Chaotic Attractors | 102 |
| | Problems | 103 |
| | References | 105 |
| | | |
| 6 | Probability, Random Processes, and the Statistical Description of Dynamics | 106 |
| | <i>Stephen G. Eubank and J. Doyme Farmer</i> | |
| 6.1 | Nondeterminism in Dynamics | 106 |
| 6.2 | Measure and Probability | 107 |
| 6.2.1 | Estimating a Density Function from Data | 110 |
| 6.3 | Nondeterministic Dynamics | 113 |
| 6.4 | Averaging | 115 |
| 6.4.1 | Stationarity | 115 |
| 6.4.2 | Time Averages and Ensemble Averages | 116 |
| 6.4.3 | Mixing | 120 |
| 6.5 | Characterization of Distributions | 122 |
| 6.5.1 | Moments | 122 |
| 6.5.2 | Entropy and Information | 133 |
| 6.6 | Fractals, Dimension, and the Uncertainty Exponent | 138 |
| 6.6.1 | Pointwise Dimension | 139 |
| 6.6.2 | Information Dimension | 140 |
| 6.6.3 | Fractal Dimension | 140 |
| 6.6.4 | Generalized Dimensions | 141 |
| 6.6.5 | Estimating Dimension from Data | 142 |
| 6.6.6 | Embedding Dimension | 144 |
| 6.6.7 | Fat Fractals | 144 |
| 6.6.8 | Lyapunov Dimension | 145 |
| 6.6.9 | Metric Entropy | 146 |
| 6.6.10 | Pesin's Identity | 148 |
| 6.7 | Dimensions, Lyapunov Exponents, and Metric Entropy in the Presence of Noise | 148 |
| | Problems | 149 |
| | References | 150 |

| | |
|--|------------|
| 7 Modeling Chaotic Systems | 152 |
| <i>Stephen G. Eubank and J. Doyne Farmer</i> | |
| 7.1 Chaos and Prediction | 153 |
| 7.2 State Space Reconstruction | 154 |
| 7.2.1 Derivative Coordinates | 155 |
| 7.2.2 Delay Coordinates | 155 |
| 7.2.3 Broomhead and King Coordinates | 157 |
| 7.2.4 Reconstruction as Optimal Encoding | 157 |
| 7.3 Modeling Chaotic Dynamics | 157 |
| 7.3.1 Choosing an Appropriate Model | 157 |
| 7.3.2 Order of Approximation | 158 |
| 7.3.3 Scaling of Errors | 160 |
| 7.4 System Characterization | 162 |
| 7.5 Noise Reduction | 163 |
| 7.5.1 Shadowing | 164 |
| 7.5.2 Optimal Solution of Shadowing Problem with Euclidean Norm | 167 |
| 7.5.3 Numerical Results | 168 |
| 7.5.4 Statistical Noise Reduction | 170 |
| 7.5.5 Limits to Noise Reduction | 172 |
| Problems | 174 |
| References | 174 |

Part III Pattern Formation and Disorderly Growth

| | |
|---|------------|
| 8 Phenomenology of Growth | 179 |
| <i>Leonard M. Sander</i> | |
| 8.1 Aggregation: Patterns and Fractals Far from Equilibrium | 179 |
| 8.2 Natural Systems | 181 |
| 8.2.1 Ballistic Growth | 181 |
| 8.2.2 Diffusion-Limited Growth | 183 |
| 8.2.3 Growth of Colloids and Aerosols | 190 |
| Problems | 190 |
| References | 190 |
| 9 Models and Applications | 192 |
| <i>Leonard M. Sander</i> | |
| 9.1 Ballistic Growth | 192 |
| 9.1.1 Simulations and Scaling | 192 |
| 9.1.2 Continuum Models | 196 |
| 9.2 Diffusion-Limited Growth | 197 |
| 9.2.1 Simulations and Scaling | 197 |
| 9.2.2 The Mullins–Sekerka Instability | 200 |
| 9.2.3 Orderly and Disorderly Growth | 201 |

| | |
|--|-----|
| 9.2.4 Electrochemical Deposition: A Case Study | 203 |
| 9.3 Cluster-Cluster Aggregation | 205 |
| Appendix: A DLA Program | 206 |
| Problems | 208 |
| References | 209 |

Part IV Solitons

| | |
|--|------------|
| 10 Integrable Systems | 213 |
| <i>Lui Lam</i> | |
| 10.1 Introduction | 213 |
| 10.2 Origin and History of Solitons | 215 |
| 10.3 Integrability and Conservation Laws | 218 |
| 10.4 Soliton Equations and their Solutions | 219 |
| 10.4.1 Korteweg-de Vries Equation | 219 |
| 10.4.2 Nonlinear Schrödinger Equation | 219 |
| 10.4.3 Sine-Gordon Equation | 219 |
| 10.4.4 Kadomtsev-Petviashvili Equation | 223 |
| 10.5 Methods of Solution | 224 |
| 10.5.1 Inverse Scattering Method | 224 |
| 10.5.2 Bäcklund Transformation | 225 |
| 10.5.3 Hirota Method | 226 |
| 10.5.4 Numerical Method | 226 |
| 10.6 Physical Soliton Systems | 227 |
| 10.6.1 Shallow Water Waves | 227 |
| 10.6.2 Dislocations in Crystals | 228 |
| 10.6.3 Self-Focusing of Light | 229 |
| 10.7 Conclusions | 230 |
| Problems | 230 |
| References | 231 |
| 11 Nonintegrable Systems | 234 |
| <i>Lui Lam</i> | |
| 11.1 Introduction | 234 |
| 11.2 Nonintegrable Soliton Equations with Hamiltonian Structures | 236 |
| 11.2.1 The θ^4 Equation | 236 |
| 11.2.2 Double Sine-Gordon Equation | 237 |
| 11.3 Nonlinear Evolution Equations | 237 |
| 11.3.1 Fisher Equation | 238 |
| 11.3.2 The Damped θ^4 Equation | 239 |
| 11.3.3 The Damped Driven Sine-Gordon Equation | 240 |
| 11.4 A Method of Constructing Soliton Equations | 243 |
| 11.5 Formation of Solitons | 244 |
| 11.6 Perturbations | 245 |

| | |
|------------------------------------|-----|
| 11.7 Soliton Statistical Mechanics | 247 |
| 11.7.1 The θ^4 System | 248 |
| 11.7.2 The Sine-Gordon System | 251 |
| 11.8 Solitons in Condensed Matter | 252 |
| 11.8.1 Liquid Crystals | 252 |
| 11.8.2 Polyacetylene | 261 |
| 11.8.3 Optical Fibers | 264 |
| 11.8.4 Magnetic Systems | 266 |
| 11.9 Conclusions | 266 |
| Problems | 267 |
| References | 268 |

Part V Special Topics

| | |
|--|------------|
| 12 Cellular Automata and Discrete Physics | 275 |
| <i>David E. Hiebeler and Robert Tatar</i> | |
| 12.1 Introduction | 275 |
| 12.1.1 A Well-Known Example: Life | 277 |
| 12.1.2 Cellular Automata | 278 |
| 12.1.3 The Information Mechanics Group | 279 |
| 12.2 Physical Modeling | 280 |
| 12.2.1 CA Quasiparticles | 280 |
| 12.2.2 Physical Properties from CA Simulations | 281 |
| 12.2.3 Diffusion | 282 |
| 12.2.4 Sound Waves | 285 |
| 12.2.5 Optics | 287 |
| 12.2.6 Chemical Reactions | 289 |
| 12.3 Hardware | 290 |
| 12.4 Current Sources of Literature | 291 |
| 12.5 An Outstanding Problem in CA Simulations | 291 |
| Problems | 292 |
| References | 294 |
| 13 Visualization Techniques for Cellular Dynamata | 296 |
| <i>Ralph H. Abraham</i> | |
| 13.1 Historical Introduction | 296 |
| 13.2 Cellular Dynamata | 297 |
| 13.2.1 Dynamical Schemes | 297 |
| 13.2.2 Complex Dynamical Systems | 297 |
| 13.2.3 CD Definitions | 297 |
| 13.2.4 CD States | 299 |
| 13.2.5 CD Simulation | 299 |
| 13.2.6 CD Visualization | 299 |
| 13.3 An Example of Zeeman's Method | 300 |
| 13.3.1 Zeeman's Heart Model: Standard Cell | 300 |
| 13.3.2 Zeeman's Heart Model: Physical Space | 300 |

| | |
|---|------------|
| 13.3.3 Zeeman's Heart Model: Beating | 300 |
| 13.4 The Graph Method | 300 |
| 13.4.1 The Biased Logistic Scheme | 301 |
| 13.4.2 The Logistic/Diffusion Lattice | 301 |
| 13.4.3 The Global State Graph | 302 |
| 13.5 The Isochron Coloring Method | 305 |
| 13.5.1 Isochrons of a Periodic Attractor | 305 |
| 13.5.2 Coloring Strategies | 305 |
| 13.6 Conclusions | 306 |
| References | 306 |
| 14 From Laminar Flow to Turbulence | 308 |
| <i>Geoffrey K. Vallis</i> | |
| 14.1 Preamble and Basic Ideas | 308 |
| 14.1.1 What Is Turbulence? | 309 |
| 14.2 From Laminar Flow to Nonlinear Equilibration | 311 |
| 14.2.1 A Linear Analysis: The Kelvin–Helmholz Instability | 312 |
| 14.2.2 A Weakly Nonlinear Analysis: Landau's Equation | 314 |
| 14.3 From Nonlinear Equilibration to Weak Turbulence | 321 |
| 14.3.1 The Quasi-Periodic Sequence | 322 |
| 14.3.2 The Period Doubling Sequence | 324 |
| 14.3.3 The Intermittent Sequence | 335 |
| 14.3.4 Fluid Relevance and Experimental Evidence | 337 |
| 14.4 Strong Turbulence | 341 |
| 14.4.1 Scaling Arguments for Inertial Ranges | 341 |
| 14.4.2 Predictability of Strong Turbulence | 348 |
| 14.4.3 Renormalizing the Diffusivity | 352 |
| 14.5 Remarks | 355 |
| References | 357 |
| 15 Active Walks: Pattern Formation, Self-Organization, and Complex Systems | 359 |
| <i>Lui Lam</i> | |
| 15.1 Introduction | 359 |
| 15.2 Basic Concepts | 360 |
| 15.3 Continuum Description | 361 |
| 15.4 Computer Models | 363 |
| 15.4.1 A Single Walker | 363 |
| 15.4.2 Branching | 366 |
| 15.4.3 Multiwalkers and Updating Rules | 366 |
| 15.4.4 Track Patterns | 368 |
| 15.5 Three Applications | 371 |
| 15.5.1 Dielectric Breakdown in a Thin Layer of Liquid | 371 |
| 15.5.2 Ion Transport in Glasses | 375 |
| 15.5.3 Ant Trails in Food Collection | 376 |
| 15.6 Intrinsic Abnormal Growth | 378 |

| | | |
|--------|--|------------|
| 15.7 | Landscapes and Rough Surfaces | 380 |
| 15.7.1 | Groove States | 382 |
| 15.7.2 | Localization–Delocalization Transition | 383 |
| 15.7.3 | Scaling Properties | 387 |
| 15.8 | Fuzzy Walks | 390 |
| 15.9 | Related Developments and Open Problems | 393 |
| 15.10 | Conclusions | 395 |
| | References | 396 |
| | Appendix: Historical Remarks on Chaos | 401 |
| | <i>Michael Nauenberg</i> | |
| | Contributors | 407 |
| | Index | 411 |
