Contents

Preface, viii

1 From Jack Beans to Designer Genes, 1

- 1.1 Introduction, 1
- 1.2 Discovery of enzymes, 1
- 1.3 The discovery of coenzymes, 3
- 1.4 The commercial importance of enzymes in biosynthesis and biotechnology, 4
- 1.5 The importance of enzymes as targets for drug discovery, 5

2 All Enzymes are Proteins, 7

- 2.1 Introduction, 7
- 2.2 The structures of the L- α -amino acids, 7
- 2.3 The primary structure of polypeptides, 9
- 2.4 Alignment of amino acid sequences, 11
- 2.5 Secondary structures found in proteins, 12
- 2.6 The folded tertiary structure of proteins, 14
- 2.7 Enzyme structure and function, 16
- 2.8 Metallo-enzymes, 19
- 2.9 Membrane-associated enzymes, 20
- 2.10 Glycoproteins, 21

3 Enzymes are Wonderful Catalysts, 25

- 3.1 Introduction, 25
- 3.2 A thermodynamic model of catalysis, 27
- 3.3 Proximity effects, 29
- 3.4 The importance of transition state stabilization, 32
- 3.5 Acid/base catalysis in enzymatic reactions, 33
- 3.6 Nucleophilic catalysis in enzymatic reactions, 37
- 3.7 The use of strain energy in enzyme catalysis. 40
- 3.8 Catalytic perfection, 41

4 Methods for Studying Enzymatic Reactions, 44

- 4.1 Introduction, 44
- 4.2 Enzyme purification, 44
- 4.3 Enzyme kinetics. 47
- 4.4 The stereochemical course of an enzymatic reaction, 53
- 4.5 The existence of intermediates in enzymatic reactions, 59

v

- 4.6 Analysis of transition states in enzymatic reactions. 63
- 4.7 Determination of active site catalytic groups, 66

5 Hydrolytic and Group Transfer Reactions, 73

- 5.1 Introduction, 73
- 5.2 The peptidases, 74
- 5.3 Esterases and lipases, 87
- 5.4 Acyl transfer reactions in biosynthesis: use of coenzyme A (CoA), 88
- 5.5 Enzymatic phosphoryl transfer reactions, 90
- 5.6 Adenosine 5'-triphosphate (ATP), 95
- 5.7 Enzymatic glycosyl transfer reactions, 96
- 5.8 Methyl (CH₃-) group transfer: use of S-adenosylmethionine (SAM) and tetrahydrofolate coenzymes for one-carbon transfers, 99

6 Enzymatic Redox Chemistry, 106

- 6.1 Introduction, 106
- 6.2 NAD-dependent dehydrogenases, 108
- 6.3 Flavin-dependent dehydrogenases and oxidases, 113
- 6.4 Flavin-dependent mono-oxygenases, 118
- 6.5 Case study: glutathione and trypanothione reductases, 120
- 6.6 Deazaflavins and pterins, 123
- 6.7 Iron-sulphur clusters, 124
- 6.8 Metal-dependent mono-oxygenases, 126
- 6.9 α-Ketoglutarate-dependent dioxygenases, 128
- 6.10 Non-haem iron-dependent dioxygenases, 130

7 Enzymatic Carbon–Carbon Bond Formation, 136

- 7.1 Introduction, 136
- 7.2 Carbon-carbon bond formation via carbanion equivalents, 138 Aldolases (case study: fructose 1,6-bisphosphate aldolase), 138 Claisen enzymes, 141 Assembly of fatty acids and polyketides, 145 Carboxylases: use of biotin, 149 Ribulose bisphosphate carboxylase/oxygenase (Rubisco), 150 Vitamin K-dependent carboxylase, 152 Thiamine pyrophosphate (TPP)-dependent enzymes, 155
- 7.3 Carbon-carbon bond formation via carbonium ion intermediates, 158 Terpene cyclases, 158
- 7.4 Carbon-carbon bond formation via radical intermediates, 162
 Phenolic radical couplings, 162
 Lignin biosynthesis, 163

8 Enzymatic Addition/Elimination Reactions, 170

- 8.1 Introduction, 170
- 8.2 Hydratases and dehydratases, 171
- 8.3 Ammonia lyases, 176
- 8.4 Elimination of phosphate and pyrophosphate, 178
- 8.5 Case study: EPSP synthase, 180

9 Enzymatic Transformations of Amino Acids, 185

- 9.1 Introduction, 185
- 9.2 PLP-dependent reactions at the α -position, 186
- 9.3 Case study: aspartate aminotransferase, 190
- 9.4 Reactions at the β and γ -positions of amino acids, 192
- 9.5 Serine hydroxymethyltransferase, 195
- 9.6 N-Pyruvoyl-dependent amino acid decarboxylases, 195
- 9.7 Imines and enamines in alkaloid biosynthesis, 195

10 Isomerases, 201

- 10.1 Introduction, 201
- 10.2 Cofactor-independent racemases and epimerases, 201
- 10.3 Keto-enol tautomerases, 203
- 10.4 Allylic isomerases, 205
- 10.5 Case study: chorismate mutase, 207
- 10.6 Vitamin B₁₂-dependent re-arrangements, 209

11 Non-enzymatic Biological Catalysis, 216

- 11.1 Introduction, 216
- 11.2 Catalytic RNA, 216
- 11.3 Catalytic antibodies, 218
- 11.4 Synthetic enzyme models, 223

Appendices, 229

- 1 Prelog rule for stereochemical nomenclature, 229
- 2 Amino acid abbreviations, 231
- 3 A simple demonstration of enzyme catalysis, 232
- 4 Answers to problems, 234

Index, 243

Colour plates fall between pp. 152 and 153 Problems and further reading are included at the end of each chapter
