

Hydrogen in Metals III

Properties and Applications

Edited by H. Wipf

With Contributions by

R.G. Barnes P. Dantzer H. Grabert D.K. Ross
H.R. Schober H. Vehoff H. Wipf

With 117 Figures

Springer

Contents

1. Introduction	
By H. Wipf (With 1 Figure)	1
References	3
2. Theory of Tunneling and Diffusion of Light Interstitials in Metals	
By H. Grabert and H.R. Schober (With 7 Figures)	5
2.1 Background	5
2.2 Statics and Dynamics of Hydrogen in Metals	8
2.3 Hamiltonian of the Hydrogen-Phonon System	13
2.4 Hydrogen Diffusion at Elevated Temperatures	17
2.5 Hamiltonian for Two-Level Systems in Metals	24
2.5.1 Reduced Density Matrix	26
2.5.2 Effective Electronic Density of States in a Normalconducting Metal	27
2.5.3 Effective Electronic Density of States in a Superconducting Metal	28
2.5.4 Effective Phononic Density of States	29
2.5.5 Effective Spectral Density	29
2.5.6 Equivalent Spin-Boson Hamiltonian	30
2.6 Time Evolution of the Two-Level System	31
2.6.1 Unitary Transformation	31
2.6.2 Equation of Motion	31
2.6.3 Memory Function	33
2.7 Incoherent Tunneling	33
2.7.1 Hopping Rate	34
2.7.2 Electron Dominated Region	35
2.7.3 Phonon Dominated Region	36
2.8 Coherent Tunneling	39
2.8.1 Low-Temperature Memory Function	39
2.8.2 Structure Factor for Neutron Scattering	40
2.8.3 Crossover from Coherent to Incoherent Tunneling	41
2.8.4 Effect of an Asymmetry Energy	44
2.8.5 Coherent Tunneling in a Superconducting Metal	45
2.9 Conclusions	46
References	47

3. Diffusion of Hydrogen in Metals	
By H. Wipf (With 24 Figures)	51
3.1 Theoretical Background	52
3.1.1 Chemical Diffusion and Self Diffusion	52
3.1.2 Correlation Factor and Velocity Correlation Functions	54
3.1.3 External Forces	56
3.1.4 Jump Diffusion	57
3.1.5 The Influence of Traps	58
3.2 The Diffusion Coefficient of Hydrogen in Pure Metals and Some Representative Alloys	59
3.2.1 Diffusion in fcc Metals	59
(A) Copper, Silver, Gold, and Platinum	59
(B) Aluminum	60
(C) Nickel	61
(D) Palladium	62
3.2.2 Diffusion in bcc Metals	63
(A) Iron	64
(B) Vanadium, Niobium and Tantalum	65
(C) Molybdenum and Tungsten	68
3.2.3 Diffusion in Hexagonal Metals	69
(A) Lutetium	70
(B) Yttrium	71
(C) Titanium, Zirconium and Hafnium	72
3.2.4 Diffusion in Alloys	73
3.2.5 Diffusion in Metallic Glasses	74
3.3 Local Dynamical Processes of Trapped Hydrogen Interstitials	76
3.3.1 Oxygen, Nitrogen and Carbon Traps in Niobium	76
(A) Hydrogen Motion Between Two Nearest-Neighbor Sites	77
(B) Hydrogen Jumps Between Nonnearest-Neighbor Trap Sites	82
3.3.2 Other Trap Systems	83
References	86
4. Nuclear Magnetic Resonance in Metal Hydrogen Systems	
By R.G. Barnes (With 16 Figures and 1 Table)	93
4.1 Background	93
4.2 Structural Information	95
4.2.1 Magnetic Dipolar Second Moments	95
4.2.2 Electric Quadrupole Interactions	96
4.3 Motion and Diffusion of Hydrogen	97
4.3.1 Mean Residence Times and Relaxation Rates	98
(A) Magnetic Dipolar Relaxation	98
(B) Distributions of Motional Parameters	103
(C) Electric Quadrupole Relaxation	104

4.3.2 Other Relaxation Mechanisms	107
(A) Relaxation by Paramagnetic Impurity Ions, R_{1p} . .	107
(B) Cross-Relaxation to Quadrupolar Metal Nuclei, R_{1c}	110
(C) Anomalous High-Temperature Relaxation, R_{1x} . .	112
4.3.3 Measurement of Hydrogen Diffusion	114
4.4 Electronic Structure	114
4.5 Applications	119
4.5.1 Binary Metal-Hydrogen Systems	119
(A) Group III Systems	119
Solid Solution (α) Phase	119
Dihydride Phase	121
Magnetic Rare-Earths: Rare-Earth Nuclei	122
Magnetic Rare-Earths: Hydrogen Nuclei	123
(B) Group IV Systems	124
Solid Solution (α) Phase	124
Dihydride Phases	125
(C) Group V Systems	127
Solid Solution (α and α') Phases	127
Hydride Phases	131
(D) Group VI Systems	133
(E) Palladium-Hydrogen	133
(F) Actinide Hydrides	135
4.5.2 Intermetallic Hydrides	136
(A) $\text{LaNi}_5\text{-H}$ and Related Systems	136
(B) TiFe-H and Related Systems	137
(C) Laves Phase Hydrides	137
(D) Other Intermetallic Hydrides	139
4.5.3 Random Alloy and Amorphous Systems	140
(A) Random Alloy Systems	140
(B) Amorphous Systems	141
4.6 Summary	142
References	144

5. Neutron Scattering Studies of Metal Hydrogen Systems

By D.K. Ross (With 16 Figures)	153
5.1 The Neutron Scattering Method	154
5.1.1 Advantages of the Neutron Scattering Technique for Investigating Metal-Hydrogen Systems	154
5.1.2 Basic Theory of Neutron Scattering	154
5.1.3 Sources of Thermal Neutrons	157
5.2 Theory of Quasi-elastic Neutron Scattering	157
5.2.1 Van Hove Correlation Functions and the Intermediate Scattering Functions	157
5.2.2 Long-Range Tracer and Chemical Diffusion	158
5.2.3 Incoherent Quasi-elastic Neutron Scattering from a Lattice Gas: The Chudley-Elliott Model	159

5.2.4	Extension of the Chudley-Elliott Model to Non-Bravais Lattices	160
5.2.5	Incoherent Quasi-elastic Scattering from a Lattice Gas at Finite Concentrations	161
5.2.6	Diffusion in a Lattice with Traps	163
5.2.7	Coherent Quasi-elastic Scattering from a Non- interacting Lattice Gas at Arbitrary Concentrations . .	165
5.2.8	Coherent Quasi-elastic Neutron Scattering from an Interacting Lattice Gas	167
5.2.9	The Effect of Lattice Stress on Coherent Quasi-elastic Neutron Scattering	168
5.3	Experimental Methods of Measuring Quasi-elastic Neutron Scattering	170
5.3.1	General Features of Quasi-elastic Neutron Scattering Spectrometry	170
5.3.2	Direct Geometry Time-of-Flight Spectrometers	172
5.3.3	Indirect Geometry Time-of-Flight Spectrometers	173
5.3.4	Back-Scattering Spectrometers	174
5.3.5	Spin Polarization Analysers	175
5.3.6	The Neutron Spin-Echo Technique	176
5.4	Quasi-elastic Neutron Scattering Measurements on Metal-Hydrogen Systems	178
5.4.1	The Palladium-Hydrogen System	178
5.4.2	Hydrogen in the bcc Metals: The Niobium, Tantalum, and Vanadium Systems	179
5.4.3	Quasi-elastic Scattering from the Niobium-Deuterium System	180
5.4.4	Quasi-elastic Scattering from Hydrogen Diffusing in a Simple Hexagonal Lattice	181
5.4.5	Diffusion in Hydrides: Titanium Dihydride and Yttrium Dihydride	182
5.5	Theory of Inelastic Neutron Scattering	184
5.5.1	Incoherent Inelastic Neutron Scattering from an Atom in a Harmonic Potential: The Einstein Oscillator	184
5.5.2	Perturbation Theory Analysis of Anharmonic and Anisotropic Effects in Inelastic Neutron Scattering from Hydrogen in Metals	185
5.5.3	The Parabolic Term in the Potential at Asymmetric Sites Calculated from Parametrized Pairwise Potentials	190
5.5.4	Incoherent Inelastic Neutron Scattering from Stoichiometric and Non-stoichiometric Hydrides	192
5.5.5	Coherent Inelastic Scattering from Metal Deuterides .	193
5.6	The Deep Inelastic Neutron Scattering Technique	193
5.7	Experimental Methods of Measuring Inelastic Neutron Scattering	195

5.7.1	General Features of Inelastic Neutron Scattering Spectrometry	195
5.7.2	TFXA, an Indirect Geometry Time-Focusing Spectrometer on a Pulsed Neutron Source	196
5.7.3	MARI, a Direct Geometry Chopper Spectrometer on a Pulsed Neutron Source	197
5.8	Inelastic Neutron Scattering Measurements on Metal-Hydrogen Systems	198
5.8.1	fcc Hydrides with Hydrogen in the Octahedral Sites	198
5.8.2	bcc Systems: Nb/H, V/H, and Ta/H	202
5.8.3	Hydrides with the Fluorite Structures	205
5.8.4	fcc Metals with Both Tetrahedral and Octahedral Sites Occupied	206
5.8.5	hcp Metals with Extensive Hydrogen Solubility Ranges	206
5.9	Conclusions	209
	References	210
6.	Hydrogen Related Material Problems	
	By H. Vehoff (With 41 Figures and 4 Tables)	215
6.1	Phenomenology of Hydrogen Damage	215
6.2	Degradation of Mechanical Properties Due to High-Pressure Hydrogen	219
6.2.1	Hydrogen Entry from the Liquid Phase	221
	(A) Hydrogen Entry at Crack Tips	223
6.2.2	Hydrogen Attack	225
6.2.3	Hydrides	227
	(A) Hydride Formation at Crack Tips	228
6.2.4	Formation and Growth of Cavities	228
6.3	Hydrogen Assisted Crack Growth	230
6.3.1	Equilibrium Aspects of Hydrogen Damage	230
	(A) Adsorption of Hydrogen	230
	(B) Elastic Interactions of Hydrogen with the Metal Lattice	232
	(C) Hydrogen-Defect Interaction	233
6.3.2	Hydrogen Trapping at Crack Tips	234
	(A) Equilibrium Models of Crack Growth	239
6.3.3	Kinetic Aspects of Hydrogen Damage	244
	(A) Kinetic Models of Crack Growth	245
	(B) Single Crystals	246
	(C) Commercial Alloys	250
	(D) Adsorption of Oxygen	253
6.4	Failure Mechanisms	255
6.4.1	Interfacial Fracture	255
	(A) Segregation	258
	(B) Decohesion of Segregated Interfaces	259

6.4.2 Ductile/Brittle Transition	264
(A) Effect of Hydrogen	267
(B) Hydrogen Enhanced Local Plasticity	267
(C) Hydrogen Enhanced Brittle Fracture	268
(D) Intermetallics	269
6.4.3 Atomistic Computer Simulations of Hydrogen Embrittlement	271
6.5 Conclusions	273

7. Metal-Hydride Technology: A Critical Review	
By P. Dantzer (With 13 Figures and 5 Tables)	279
7.1 Outline	280
7.2 Current Problems in Hydride Applications	281
7.3 Relevant Properties	282
7.3.1 Thermo-Chemical Reactivity	282
(A) Thermodynamics	282
(B) Chemical Contamination	287
(C) Stability and Cycling	288
7.3.2 Transport Properties	290
(A) Kinetics Survey	290
(B) Thermal Properties and Confinement	293
(C) Dynamic Properties	298
7.4 Applications	300
7.4.1 Hydrogen Storage	300
(A) Large and Medium Sized Stationary Storage	301
(B) Small Stationary Storage	302
(C) Mobile Transportation	303
7.4.2 Chemical Selectivity	305
(A) Getters	305
(B) Purification	306
(C) Separation	308
Industrial	308
Isotopic	310
7.4.3 Hydrides and Thermodynamic Devices	312
(A) Thermochemical Hydride Compressors	313
Principle	313
Development	314
Uses of Hydride Compressors	315
(B) Heat Management: Hydride Chemical Engines ..	316
Thermodynamic Principles	317
Alloy Selection and Expected Temperature Ranges	318
Prototype Development	321
Dynamics of Hydride Beds, Experiments, Models and Problems	323
7.4.4 High-Temperature Applications	324

7.4.5 Sensors and Detectors	325
7.4.6 Batteries	325
(A) Principle	326
(B) Development	326
7.4.7 Fuel Cells	329
7.5 Conclusions	329
