# The Physics of Structural Phase Transitions

With 90 Figures

Springer

# Contents

Preface	vii
<b>PART ONE</b>	
<b>BASIC CONCEPTS</b>	<b>1</b>
<b>CHAPTER 1</b>	
<b>Thermodynamical Principles and the Landau Theory of Phase Transitions</b>	<b>3</b>
1.1. Introduction	3
1.2. Phase Equilibria in Isotropic Systems	4
1.3. Chemical Potentials in First-Order Phase Transitions and Metastable States	6
1.4. The van der Waals Equation of State	10
1.5. The Ehrenfest Definition of the Second-Order Phase Transition and the Landau Theory for a Binary Transition	14
1.6. Order-Parameter Susceptibility, the Curie–Weiss Law, and Domains	20
1.7. Beyond Classical Thermodynamics, the Nature of Critical Fluctuations	23
1.8. Remarks on Critical Exponents	26
<b>CHAPTER 2</b>	
<b>Order Variables and Their Correlations, and the Mean-Field Approximation</b>	<b>28</b>
2.1. Order Variables and Their Mean-Field Average	28
2.2. Probabilities, Short-Range Correlations, and the Order Parameter	30
2.3. Mean-Field Theory of Order–Disorder Statistics	34
2.4. The Ising Model for Spin–Spin Correlations	36
	ix

## CHAPTER 3

<b>Pseudospins and Their Collective Modes in Displacive Crystals</b>	<b>41</b>
3.1. Pseudospins in Displacive Crystals	41
3.2. The Landau Criterion for Classical Fluctuations	44
3.3. Quantum-Mechanical Pseudospins and Their Correlations in Crystals	46
3.4. Collective Pseudospin Modes in Displacive Systems	49
3.5. Examples of Collective Pseudospin Modes	51
3.5.1. Strontium Titanate and Related Perovskites	52
3.5.2. Tris-Sarcosine Calcium Chloride and Related Crystals	55
3.6. The Curie–Weiss Singularity in Collective Pseudospin Modes	59

## CHAPTER 4

<b>Soft Lattice Modes and Pseudospin Condensates</b>	<b>62</b>
4.1. Introduction	62
4.2. The Lyddane–Sachs–Teller Relation	65
4.3. Long-Range Interactions and the Cochran Soft-Mode Theory	69
4.4. Anharmonic Lattice Potentials and the Cowley Theory	72
4.5. Observation of Soft-Mode Spectra	75
4.6. The Central Peak	79
4.7. Symmetry-Breaking Fluctuations of Pseudospins	81
4.8. Macroscopic Properties of Pseudospin Condensates	87

## CHAPTER 5

<b>Pinning and Dynamics of Pseudospin Condensates in Practical Crystals</b>	<b>91</b>
5.1. Introduction	91
5.2. The Pinning Potential	92
5.3. Collective Pseudospin Dynamics in a One-Dimensional Lattice	95
5.4. The Lifshitz Condition for Incommensurability	101
5.5. Condensate Locking by a Pseudoperiodic Lattice Potential	103

## PART TWO

<b>EXPERIMENTAL STUDIES</b>	<b>111</b>
-----------------------------	------------

## CHAPTER 6

<b>Diffuse X-Ray Diffraction and Neutron Inelastic Scattering from Modulated Crystals</b>	<b>113</b>
6.1. Modulated Crystals	113
6.2. The Bragg Law for X-Ray Diffraction	115
6.3. Diffraction from Weakly Modulated Structures	118
6.4. Diffuse Laue Diffraction from Perovskite Crystals in the Critical Region	122
6.5. Neutron Inelastic Scattering	125

## CHAPTER 7

<b>Light Scattering and Dielectric Studies on Modulated Crystals</b>	<b>133</b>
7.1. Raman Scattering Studies on Structural Phase Transitions	133

7.2. Rayleigh and Brillouin Scattering from Polar Crystals	139
7.3. Dielectric Relaxation	142
7.4. Dielectric Spectra in the Ferroelectric Phase Transition of TSCC	145
CHAPTER 8	
The Spin Hamiltonian and Magnetic Resonance Spectroscopy	151
8.1. Introduction	151
8.2. Magnetic Resonance and Relaxation	153
8.3. Magnetic Resonance Spectrometers	157
8.4. The Spin Hamiltonian	160
8.5. The Fine Structure	164
8.6. Hyperfine Interactions and Forbidden Transitions	167
8.7. Tensor Analysis for Spin-Hamiltonian Parameters	170
CHAPTER 9	
Magnetic Resonance Sampling and Nuclear Spin Relaxation Studies of Pseudospin Condensates	174
9.1. Paramagnetic Spins in a Modulated Crystal	174
9.2. The Spin Hamiltonian in Modulated Crystals	176
9.2.1. The $g$ Tensor Anomaly	176
9.2.2. The Hyperfine Anomaly	180
9.2.3. The Fine Structure Anomaly	180
9.3. Structural Phase Transitions as Observed by Paramagnetic Resonance Spectra	182
9.3.1. The Ferroelectric Phase Transition in TSCC Crystals	182
9.3.2. Structural Phase Transitions in BCCD	191
9.4. Nuclear Quadrupole Relaxation in Incommensurate Phases	201
CHAPTER 10	
Structural Phase Transitions in Miscellaneous Systems	206
10.1. Cell-Doubling Transitions in Oxide Perovskites	206
10.2. The Incommensurate Phase in Beta Thorium Tetrabromide	211
10.3. Phase Transitions in Deuterated Biphenyl Crystals	216
10.4. Successive Phase Transitions in $A_2BX_4$ Family Crystals	220
10.5. Incommensurate Phases in $RbH_3(SeO_3)_2$ and Related Crystals	224
10.6. Phase Transitions in $(NH_4)_2SO_4$ and $NH_4AlF_4$	227
10.7. Remarks on Proton Ordering in Hydrogen-Bonded Crystals	232
References	237
Index	241
