## TABLE OF CONTENTS

Introduction	vii
CHAPTER 0 — NOTATIONS AND PRELIMINARIES	1
CHAPTER 1 — BAIRE LINEAR SPACES	9
1.1 Topological Preliminaries	9
1.2 Baire linear spaces	13
1.3 Some examples of metrizable locally convex spaces which are not Baire	28
1.4 Notes and Remarks	30
CHAPTER 2 — BASIC TOOLS	33
2.1 The sliding-hump technique	33
2.2 Linearly independent sequences in Fréchet spaces	37
2.3 Biorthogonal systems and transversal subspaces	44
2.4 The three-space problem for Fréchet spaces	51
2.5 Some results on separability	52
2.6 Some results concerning the space $K^N$	65
2.7 Notes and Remarks	75
CHAPTER 3 — BARRELS AND DISCS	
3.1 Barrels	81
3.2 The space $E_B$ . Banach discs	82
3.3 Some Lemmata	91
3.4 Notes and Remarks	93
CHAPTER 4 — BARRELLED SPACES	95
4.1 Definitions and characterizations	95
4.2 Permanence properties I	103

4.3	Permanence properties II	105
4.4	Nearly closed sets, polar topologies and the barrelled topology associated to a given topology	110
4.5	Barrelled enlargements	117
4.6	Some examples of non-barrelled spaces	127
4.7	Some examples of barrelled spaces	132
4.8	Barrelled vector-valued sequence spaces	139
4.9	Notes and Remarks	144
CHAPTER 5 — LOCAL COMPLETENESS		151
5.1	Definitions and characterizations	151
5.2	Stability of Mackey spaces	160
5.3	Notes and Remarks	164
CHAPTER 6 — BORNOLICAL AND ULTRABORNOLICAL SPACES		167
6.1	Definitions and characterizations	167
6.2	Permanence properties I	173
6.3	Permanence properties II	180
6.4	Examples	185
6.5	Representing ultrabornological spaces	191
6.6	Notes and Remarks	196
CHAPTER 7 — B- AND $B_r$ -COMPLETENESS		199
7.1	The duality closed graph theorem	199
7.2	B- and $B_r$ -complete spaces	204
7.3	Non- $B_r$ -complete spaces	209
7.4	A $B_r$ -complete space which is not B-complete	219
7.5	Notes and Remarks	221
CHAPTER 8 — INDUCTIVE LIMIT TOPOLOGIES		225
8.1	Generalized inductive limits	225
8.2	Weak barrelledness conditions	236
8.3	(DF)-and (gDF)-spaces	248
8.4	Countable inductive limits of Hausdorff locally convex spaces: Generalities. Strict inductive limits	267
8.5	Regularity conditions in countable inductive limits	281
8.6	An introduction to well-located and limit subspaces	303
8.7	Non-complete metrizable and normable (LF)-spaces	309
8.8	Completions and quotients of (LF)-spaces	315

**TABLE OF CONTENTS**

xv

8.9	Notes and Remarks	322
CHAPTER 9 — STRONG BARRELLEDNESS CONDITIONS		333
9.1	Definitions and main results	333
9.2	Permanence properties	348
9.3	Examples	355
9.4	Notes and Remarks	365
CHAPTER 10 — LOCALLY CONVEX PROPERTIES OF THE SPACE OF CONTINUOUS FUNCTIONS ENDOWED WITH THE COMPACT-OPEN TOPOLOGY		369
10.1	Main results	369
10.2	Notes and Remarks	377
CHAPTER 11 — BARRELLEDNESS CONDITIONS ON TOPOLOGICAL TENSOR PRODUCTS		381
11.1	Projective tensor products and the closed graph theorem	381
11.2	Strong barrelledness conditions and projective tensor products	385
11.3	The bi-hypocontinuous topology	390
11.4	Tensornorm topologies (a short and not too detailed account)	396
11.5	Locally convex properties and the injective tensor product	408
11.6	Projective tensor products of Fréchet and (DF)-spaces (an introduction)	416
11.7	NACHBIN's weighted spaces of continuous functions	424
11.8	The space of continuous functions with compact support	429
11.9	Projective descriptions of weighted inductive limits	434
11.10	Notes and Remarks	439
CHAPTER 12 — HOLOMORPHICALLY SIGNIFICANT PROPERTIES OF LOCALLY CONVEX SPACES		449
12.1	Preliminaries	449
12.2	Examples	457
12.3	Notes and Remarks	474
CHAPTER 13 — A SHORT COLLECTION OF OPEN PROBLEMS		477
A TABLE OF BARRELLED SPACES		481
