Contents

Preface & Acknowledgments ix

1 Introduction 1

2 Preliminaries 3
2.1 Introduction . . . 3
2.2 Notation and terminology . . . 4
2.3 Polynomial matrices . . . 5
2.4 Proper rational matrices . . . 15
2.5 Poles and zeros . . . 26
2.6 Singular values . . . 40
2.7 Basic facts on linear operators . . . 43
2.8 Functional spaces of rational matrices . . . 45
2.9 Notes and references . . . 68

3 Feedback Systems Stability 69
3.1 Introduction . . . 69
3.2 Internal and external stability . . . 70
3.3 Double coprime factorizations . . . 74
3.4 The set of stabilizing controllers . . . 80
3.5 Notes and references . . . 86

4 RH_2 Control 87
4.1 Introduction . . . 87
4.2 The full information problem . . . 89
4.3 The output estimation problem . . . 105
4.4 The partial information problem . . . 112
4.5 Notes and references . . . 119

5 RH_∞ Control 121
5.1 Introduction . . . 121
5.1.1 Nominal design . . . 122
5.1.2 Uncertainty description . . . 123
5.1.3 Robust design . . . 125
5.2 The standard problem . . . 125
5.3 The full information problem . . . 137
5.4 The output estimation problem . . . 156
5.5 The partial information problem . . . 166

5.6 The operatorial approach 182
5.7 Notes and references 193

6 Nonclassical Problems in RH_2 and RH_∞ 195
6.1 Introduction 195
6.2 Parameter Space Optimization 195
6.2.1 Stabilizing controllers 198
6.2.2 RH_2 control design 201
6.2.3 RH_∞ control design 214
6.3 Mixed RH_2 / RH_∞ control 223
6.3.1 State feedback design 224
6.3.2 Output feedback design 232
6.4 RH_2 control with regional pole placement 235
6.4.1 State feedback design 237
6.4.2 Output feedback design 240
6.5 Time-domain specifications 242
6.5.1 State feedback design 246
6.5.2 Output feedback design 248
6.6 Controllers with structural constraints 250
6.6.1 Decentralized control design 251
6.6.2 Static output control design 255
6.7 Notes and references 261

7 Uncertain Systems Control Design 263
7.1 Introduction 263
7.2 Robust stability and performance 263
7.2.1 Quadratic stabilizing controllers 268
7.2.2 RH_2 guaranteed cost control 273
7.2.3 RH_∞ guaranteed cost control 279
7.2.4 Miscellaneous design problems 281
7.3 Actuators failure 285
7.4 Nonlinear perturbations 289
7.4.1 Persidiskii design 289
7.4.2 Lur'e design 294
7.5 Notes and references 300

A Some Facts on Polynomials 301

B Singular Values of Matrices 303

C Riccati Equation 315

D Structural Properties 325

E The Standard 2-Block Scheme 327

F Loop Shifting 337

G Worst Case Analysis 343

H Convex Functions and Sets 349

I Convex Programming Numerical Tools **359**

Bibliography **371**

Index **375**
