# Complexity and Real Computation

Foreword by Richard M. Karp

With 47 Illustrations and 3 Color Plates

## Contents

#### Foreword

Preface

### I Basic Development

1	Intro	duction	3
	1.1	Aim	3
	1.2	Seven Examples	4
		1.2.1 Is the Mandelbrot Set Decidable?	4
		1.2.2 Example of the Julia Set of $T(z) = z^2 + 4$	8
		1.2.3 Newton's Method	10
		1.2.4 The Knapsack Problem	12
		1.2.5 The Hilbert Nullstellensatz as a Decision Problem	15
		1.2.6 Feasibility of Real Polynomials	17
		1.2.7 Linear Programming and Integer Programming	18
	1.3	The Classical Theory of Computation	20
	1.4	Toward a Mathematical Foundation of Numerical Analysis	22
	1.5	Classical Complexity Theory and Its Extension	24
	1.6	Complexity Theory in Numerical Analysis	28
	1.7	Summary	30
	1.8	Brief History and Comparison with Other Models of	
		Computation	31

2	Defi	nitions and First Properties of Computation	37	
	2.1	The Model of Computation: The Finite-Dimensional Case	38	
	2.2	The Input–Output Map, Halting Set, and the Computing		
		Endomorphism	44	
	2.3	Halting Sets and Computable Maps	48	
	2.4	The Mandelbrot Set Is Undecidable	55	
	2.5	The Canonical Path Construction	56	
	2.6	The Register Equations and Succinct Descriptions	58	
	2.7	More Succinct Descriptions	63	
	2.8	Additional Comments and Bibliographical Remarks	67	
3	Computation over a Ring 69			
	3.1	$R^{\infty}$ and $R_{\infty}$	70	
	3.2	Machines over $R$	71	
	3.3	Path Decomposition and Reduction to the		
		Finite-Dimensional Case	74	
	3.4	The Register Equations	77	
	3.5	Product Spaces, Codes and Universal Machines	79	
	3.6	Additional Comments and Bibliographical Remarks	81	
4	Decision Problems and Complexity over a Ring			
	4.1	Decision Problems	83	
	4.2	Complexity and the Class P	86	
	4.3	Polynomial Time Reductions	90	
	4.4	Management, Machines and Algorithms	93	
	4.5	Additional Comments and Bibliographical Remarks	96	
5	The Class NP and NP-Complete Problems			
	5.1	The Class NP	100	
	5.2	Important NP Problems	103	
	5.3	NP-Completeness	104	
	5.4	NP-Complete Problems over $\mathbb{C}$ , $\mathbb{R}$ , and $\mathbb{Z}$	104	
	5.5	NP-Complete Problems over $\mathbb{Z}_2$	107	
	5.6	Additional Comments and Bibliographical Remarks	110	
6	Integ	ger Machines	113	
	6.1	Polynomial Equivalence of Machines over $\mathbb{Z}$ and $\mathbb{Z}_2$	113	
	6.2	Some Results on Linear Inequalities	116	
	6.3	The Complexity of Integer Programming	121	
	6.4	Additional Comments and Bibliographical Remarks	124	
7	Alge	braic Settings for the Problem " $P \neq NP$ ?"	125	
	7.1	Statement of Main Theorems	125	
	7.2	Eliminating Constants: Easy Cases	127	
	7.3	Witness Theorem	129	

Appe	endix to Section 7.3	135
7.4	Elimination of Constants: General Case	136
7.5	Twenty Questions	137
7.6	Proof of Theorems 2 and 3	140
7.7	Main Theorem, an Algebraic Proof of the Converse	141
7.8	Main Theorem, a Model-Theoretic Proof of the Converse	143
7.9	Additional Comments and Bibliographical Remarks	145
Appendi	x A	
<b>A</b> .1	Basic Notions of Algebraic Geometry	147

#### 

#### **II** Some Geometry of Numerical Algorithms

8	Newt	on's Method	153
	8.1	Approximate Zeros	154
	8.2	Point Estimates for Approximate Zeros	159
	8.3	Additional Comments and Bibliographical Remarks	168
9	Fundamental Theorem of Algebra: Complexity Aspects		
	9.1	The Fundamental Theorem of Algebra	169
	9.2	A Homotopy Method	172
	9.3	Where to Begin the Homotopy	178
	9.4	The Algorithm and Its Complexity	184
	9.5	Additional Comments and Bibliographical Remarks	185
10	Bézoi	ut's Theorem	187
	10.1	The Fundamental Theorem of Algebra Revisited	187
	10.2	Projective Space	190
	10.3	The Varieties $V, \Sigma'$ , and $\Sigma$	193
	10.4	The Discriminant Variety in One Variable	194
	10.5	Bézout's Theorem	198
	10.6	Additional Comments and Bibliographical Remarks	199
11	Cond	ition Numbers and the Loss of Precision of Linear Equations	201
	11.1	The Eckart–Young Theorem	202
	11.2	Probabilities and Integrals	204
	11.3	Some Integration Formulas	205
	11.4	A Linear Algebra Estimate	209
	11.5	The Main Theorems for the Reals	210
	11.6	The Main Theorems for the Complex Numbers	213
	11.7	Additional Comments and Bibliographical Remarks	214
12	The (	Condition Number for Nonlinear Problems	217
	12.1	Unitary Invariance	217

	10.0	Hamilting Structures and Distances in Designation Second	222
	12.2	Hermitian Structures and Distances in Projective Space	222
	12.3	The Condition Number (Nonlinear)	227
	12.4	The Condition Number Theorem	232
	12.5	Additional Comments and Bibliographical Remarks	236
13	The C	Condition Number in $\mathbb{P}(\mathcal{H}_{(d)})$	237
	13.1	Integration on Manifolds	237
	13.2	A General Integral Formula	240
	13.3	Integration in V and the Average Number of Real Roots	244
	13.4	The Condition Number in $\mathcal{M}_{(n,n+1)}^{\mathbb{C}}$	248
	13.5	A Linear Algebra Estimate and the Distribution of the	
		Condition Number	250
	13.6	The Distribution of the Normalized Condition Number for	
		$\mathbb{P}(\mathcal{H}_{(d)})$	255
	13.7	Additional Comments and Bibliographical Remarks	258
14	-	olexity and the Condition Number	261
	14.1	Newton's Method in Projective Space	261
	14.2	The Higher Derivative Estimate	267
	14.3	Complexity of Homotopy Methods	271
	14.4	Additional Comments and Bibliographical Remarks	273
15	Linea	r Programming	275
10	15.1	Machines over $\mathbb{Q}$	275
	15.2	The Barrier Method in Linear Programming	277
	15.3	Linear Programming over $\mathbb{Q}$	286
	15.4	Polynomial Cost	289
	15.5	On the Cost of Inverting a Matrix	292
	15.6	Additional Comments and Bibliographical Remarks	296
	15.0		270
Ap	pendi		
	<b>B</b> .1	The Main Theorem of Elimination Theory	297
	B.2	Additional Comments and Bibliographical Remarks	299
Ш	Co	omplexity Classes over the Reals	
16	Deter	ministic Lower Bounds	303
10	16.1	A Geometric Upper Bound	303
	16.2	A Complexity Lower Bound	309
	16.3	On the Number of Connected Components of	507
	10.5	Semi-Algebraic Sets	312
	16.4	Additional Comments and Bibliographical Remarks	315
	10.4		515
17	Proba	abilistic Machines	317
	17.1	Machines That Flip Coins	318

	17.2	Simulating Probabilistic Trees	320
	17.3	Two Bounds for the Tail of the Binomial distribution	323
	17.4	Approximating the Volume of Bounded Semi-Algebraic Sets .	326
	17.5	Machines That Pick Real Numbers in [0, 1]	330
	17.6	Simulating Probabilistic Machines	332
	17.7	Additional Comments and Bibliographical Remarks	333
18	Paral	lel Computations	335
	18.1	Some Old Problems Revisited	335
	18.2	A Parallel Model of Computation	342
	18.3	Deterministic Upper Bounds for $NP_{\mathbb{R}}$	348
	18.4	Algebraic Circuits	349
	18.5	The Class $NC_{\mathbb{R}}$	352
	18.6	Additional Comments and Bibliographical Remarks	356
19	Some	Separations of Complexity Classes	359
	19.1	A Separation Result	359
	19.2	Lower Bounds for Parallel Time	365
	19.3	Completeness in $P_{\mathbb{R}}$	366
	19.4	Digital Nondeterminism	370
	19.5	The Complexity of the Knapsack Problem	371
	19.6	Additional Comments and Bibliographical Remarks	374
20	Weak	Machines	377
	20.1	A Restriction on the Number of Multiplications	377
	00.0	A Champeterization of Digital Nondatampinian	201
	20.2	A Characterization of Digital Nondeterminisnm	381
	20.2 20.3	Linear Programming and Digital Nondeterminism	383
21	20.3 20.4	Linear Programming and Digital Nondeterminism Additional Comments and Bibliographical Remarks	383 384 <b>385</b>
21	20.3 20.4 Addit 21.1	Linear Programming and Digital Nondeterminism Additional Comments and Bibliographical Remarks	383 384
21	20.3 20.4 Addit	Linear Programming and Digital Nondeterminism Additional Comments and Bibliographical Remarks	383 384 <b>385</b>
21	20.3 20.4 Addit 21.1 21.2 21.3	Linear Programming and Digital Nondeterminism Additional Comments and Bibliographical Remarks	383 384 <b>385</b> 385
21	20.3 20.4 Addia 21.1 21.2 21.3 21.4	Linear Programming and Digital Nondeterminism Additional Comments and Bibliographical Remarks	383 384 <b>385</b> 385 389 393 398
21	20.3 20.4 Addit 21.1 21.2 21.3	Linear Programming and Digital Nondeterminism Additional Comments and Bibliographical Remarks	383 384 <b>385</b> 385 389 393
