Preface	vii
<b>Part I BASIC THEORY</b>	<b>1</b>
Chapter 1 Elementary Kinetic Theory of Gases	3
Chapter 2 Molecular Statistics	9
Chapter 3 Distribution of Molecular Speeds	13
Chapter 4 Molecular Energies	19
4.1 Translation	20
4.2 Rotation	23
4.3 Vibration	26
Chapter 5 Transport Phenomena	31
5.1 Viscosity	31
5.2 Thermal Conductivity	33
5.3 Diffusion	34
5.4 Conclusions	35
Chapter 6 Intermolecular Forces	37
6.1 Origin of Molecular Interactions	37
6.1.1 Short-range Forces	37
6.1.2 Long-range Forces	38
6.1.2.1 Electrostatic Forces	38
6.1.2.2 Induction Forces	40
6.1.2.3 Dispersion Forces	41
6.2 Empirical Potential Functions	41
6.3 Determination of Intermolecular Forces	43
Chapter 7 Real Gases	45
7.1 Equations of State	45
7.2 Critical Phenomena	49
7.3 Transport Properties	52
Chapter 8 Molecular Collisions	55
8.1 Binary Collisions in Classical Mechanics	55
8.2 Quantum Theory of Binary Collisions	61

---

Part II APPLICATIONS	65
Chapter 9 Effusion and the Separation of Mixtures	67
Chapter 10 Chemical Reactions	73
10.1 Rate of Reaction	73
10.2 Energy of Activation	74
10.3 A Collision Model	75
10.4 Theory of Absolute Reaction Rates	76
10.5 Real-time Observations	80
Chapter 11 <i>Ortho</i> and <i>Para</i> Hydrogen	85
11.1 Statistical Thermodynamics	86
11.2 Equilibrium	88
Chapter 12 Atomic and Molecular Beams	89
12.1 Distribution of Molecular Speeds	89
12.2 Molecular Diffraction	91
12.3 Electron Spin	94
12.4 The Ammonia Maser	96
12.5 Chemical Reactions in Crossed Beams	98
Chapter 13 Energy Transfer	105
13.1 Velocity of Sound	107
13.2 Shock Waves	111
13.3 The Optical–Acoustical Effect	116
Chapter 14 Broadening of Spectral Lines	119
14.1 Uncertainty Broadening	119
14.2 The Doppler Effect	120
14.3 Pressure Broadening	121
Chapter 15 Gas Lasers	125
15.1 The Helium–Neon Laser	126
15.2 The Carbon Dioxide Laser	128
Chapter 16 Gas Plasmas	131
16.1 Equilibrium Plasmas	131
16.2 Electrical Conduction	134
References	137
Further Reading	139
Index	141
