Computability

Springer-Verlag
Berlin Heidelberg New York
London Paris Tokyo

Contents

Prerequisites and Notation	1
<i>Part 1: Basic Concepts of Computability</i>	<i>4</i>
1.1 Flowcharts and Machines	5
1.2 Register Machines and Register Computability	24
1.3 Primitive Recursive and μ -Recursive Functions	42
1.4 WHILE-Programs and WHILE-Computability	53
1.5 Tape Machines	59
1.6 Stack Machines	70
1.7 Comparison of Number and Word Functions, Church's Thesis	79
1.8 Recursive and Recursively Enumerable Sets	93
1.9 The Standard Numbering φ of $P^{(1)}$	103
1.10 Some Unsolvable Problems	123
<i>Part 2: Type 1 Recursion Theory</i>	<i>137</i>
2.1 The Basic Concepts of Computability Theory	138
2.2 Numberings	144
2.3 Recursive and Recursively Enumerable Sets (Continued)	159
2.4 Many-one and One-one Reducibility	177
2.5 The Recursion Theorem	191
2.6 Creative, Productive, Complete Sets	205
2.7 Effective Numberings	216
2.8 Ordinal Trees and Computable Ordinals	227
2.9 Some Applications to Logic	248
2.10 Oracle Machines and Relativized Recursion Theory	265
2.11 Turing Reducibility and the Kleene Hierarchy	279
2.12 Computational Complexity	306
<i>Part 3: Type 2 Theory of Constructivity and Computability</i>	<i>320</i>
3.1 Type 2 Computability Models	322
3.2 Recursion Theory on Baire's Space	345

3.3	Representations	367
3.4	Effective Representations	384
3.5	Complete Partial Orders	404
3.6	Type 1 Computability and Type 2 Computability	433
3.7	Solving Domain Equations	453
3.8	Applications to Analysis	479
	Bibliography	500
	Index of Notations	506
	Subject Index	511
