

Volume 30

Laser Ablation and Desorption

Edited by

John C. Miller

*Chemical and Biological Physics Section
Oak Ridge National Laboratory, Oak Ridge, Tennessee*

and

Richard F. Haglund, Jr.

*Department of Physics and Astronomy and
W. M. Keck Foundation Free-Electron Laser Center
Vanderbilt University, Nashville, Tennessee*

ACADEMIC PRESS

San Diego New York Boston London Sydney Tokyo Toronto

CONTENTS

CONTRIBUTORS	xi
PREFACE	xiii
VOLUMES IN SERIES	xv

1. Introduction to Laser Desorption and Ablation

JOHN C. MILLER

1.1. Introduction	1
1.2. Historical Development	2
1.3. Annotated Bibliography	4
References	12

2. Mechanisms of Laser-Induced Desorption and Ablation

RICHARD F. HAGLUND, JR.

2.1. Introduction	15
2.2. Photoexcitation and Material Response at Surfaces	20
2.3. Competition Between Localized and Delocalized Excitations	38
2.4. Laser-Induced Desorption from Metals, Semiconductors, and Insulators	58
2.5. Laser Ablation	76
2.6. Novel Experimental Tools for Studying Laser Ablation	107
2.7. Modeling Laser-Induced Desorption and Ablation	116
2.8. Conclusion and Outlook	123
References	126

3. Low Fluence Laser Desorption and Plume Formation from Wide Bandgap Crystalline Materials

J. THOMAS DICKINSON

3.1. Introduction	139
3.2. Photoelectron Emission	140
3.3. Photodesorption of Neutral Species	140
3.4. Photodesorption of Positive Ions	142
3.5. Low Fluence Plume Formation	152
3.6. Conclusions	169
References	170

4. Lasers, Optics, and Thermal Considerations in Ablation Experiments

COSTAS P. GRIGOROPOULOS

4.1. Definition of Laser Intensity and Fluence Variables	173
4.2. Thermal Considerations	175
4.3. Lasers Used in Ablation	187
4.4. Beam Delivery	191
4.5. Temperature of the Target	201
References	219

5. Plume Formation and Characterization in Laser-Surface Interactions

ROGER KELLY, ANTONIO MIOTELLO, ALDO MELE,
and ANNA GIARDINI GUIDONI

5.1. Introduction	225
5.2. Emission Mechanisms and Plume Formation	232

5.3. Plume Characterization	245
5.4. General Conclusions	281
References	286
6. Surface Characterization	
MARIKA SCHLEBERGER, SYLVIA SPELLER, and WERNER HEILAND	
6.1. Introduction	291
6.2. LEED and RHEED	292
6.3. Scanning Tunneling Microscopy (STM) and Atomic Force Microscopy (AFM)	299
6.4. Ion Scattering Spectrometry	306
6.5. Structural Analysis Using Ion Beams	312
6.6. Secondary Ion Mass Spectrometry (SIMS)	315
6.7. XPS and AES	318
6.8. Summary	327
References	327
7. Surface Modification with Lasers	
ZANE BALL and ROLAND SAUERBREY	
7.1. Introduction	333
7.2. Physical and Chemical Effects of Laser Irradiation	340
7.3. Surface Morphology Modification	353
7.4. Surface Modification of Polymers	359
7.5. Surface Modification of Metals and Semiconductors	362
7.6. Excimer Laser Lithography	366
7.7. Conclusion	369
References	369

8. Chemical Analysis by Laser Ablation

RICHARD E. RUSSO and XIANGLEI MAO

Introduction	375
8.1. Direct Solid-Phase Chemical Analysis	375
8.2. Laser-Induced Plasmas	376
8.3. Laser Ablation—Inductively Coupled Plasma	384
8.4. Correlation of ICP Emission to Ablated Mass	390
8.5. Ablation in Noble Gases	393
8.6. Quantitative Analysis	397
8.7. Particles	401
8.8. Conclusion	403
References	405

9. Matrix-Assisted Laser Desorption and Ionization

JAMES A. CARROLL and RONALD C. BEAVIS

9.1. Introduction	413
9.2. Protein-Doped Matrix Crystals	417
9.3. Protein Ion Sources	423
9.4. Applications to Polymer Analysis	430
References	439

10. Physical Mechanisms Governing the Ablation of Biological Tissue

GLENN EDWARDS

10.1. Introduction	449
10.2. Gedanken Experiments	450

10.3. Laser-Tissue Interactions	450
10.4. Ultraviolet and Visible Laser Ablation	456
10.5. IR-Laser Ablation	457
10.6. Toward Clinical Applications	468
10.7. Future Research	468
10.8. Concluding Remarks	469
References	470
11. Growth and Doping of Compound Semiconductor Films by Pulsed Laser Ablation	
DOUGLAS H. LOWNDES	
11.1. Introduction	475
11.2. Characteristics of Laser Ablation Important for Film Growth	477
11.3. Growth of Compound Semiconductor Films by Pulsed Laser Ablation	517
References	557
12. Laser Ablation in Optical Components and Thin Films	
MICHAEL REICHLING	
12.1. Introduction	573
12.2. Experimental Techniques	576
12.3. Laser Ablation from Bulk Optical Materials	581
12.4. Laser Ablation from Thin Film Optical Materials	607
References	616

13. The Future of Laser Ablation

RICHARD F. HAGLUND, JR.

13.1. Introduction	625
13.2. Material Cutting and Joining	627
13.3. Cluster-Beam Generation by Laser Ablation	628
13.4. Laser Plasma X-ray Generation	630
13.5. Lasers in the Semiconductor Industry	631
13.6. High-Speed Color Printing	634
13.7. Laser Ablation in Microfabrication	636
13.8. Conclusions	638
References	639
