Contents

Foreword xi

Preface xiii

1 Introduction 1

1.1 Emergence of Discrete Event Systems 1

1.2 Need for Analysis 2

1.3 What This Book is About 3

1.4 Summary 4

1.5 For Further Study 5

1.6 Problems 5

2 Modeling 7

2.1 Overview 7

2.2 A Discrete Event System Model 9

2.3 Examples 10

2.3.1 Single Buffer Machine 11

2.3.2 Load Balancing System 12

2.4 Petri Net Model 14

2.5 Petri Net Examples 16

2.5.1 Production Network 16

2.5.2 Network of Computers 18
2.6 Summary 18
2.7 For Further Study 19
2.8 Problems 19

3 Stability Concepts and Analysis Techniques 23
3.1 Overview 23
3.2 Mathematical Preliminaries 24
3.3 Stability Concepts 25
3.4 Stability Analysis Techniques 28
3.5 Reachability and Cyclic Properties 34
3.6 DES Applications 35
3.6.1 Automata and Finite State Systems 35
3.6.2 Petri Nets 36
3.6.3 Rate Synchronized Manufacturing Line 38
3.7 Summary 39
3.8 For Further Study 39
3.9 Problems 41

4 Load Balancing in Computer Networks 45
4.1 Overview 45
4.2 A Load Balancing Problem without Delays 46
4.2.1 Asymptotic Convergence to a Balanced State 49
4.2.2 Exponential Convergence to a Balanced State 51
4.3 Load Balancing Problem Generalizations 57
4.3.1 Generalized Load Passing Conditions 57
4.3.2 Virtual Load 58
4.3.3 Discrete Load 60
4.4 The Load Balancing Problem with Delays 64
4.4.1 Asymptotic Convergence to a Balanced State 68
4.4.2 Exponential Convergence to a Balanced State 74
4.5 Summary 81
4.6 For Further Study 81
4.7 Problems 82

5 Scheduling in Manufacturing Systems **85**
5.1 Overview *85*
5.2 FMS Scheduling: A Distributed Approach *86*
5.2.1 Machine Model and Stream Constraints *86*
5.2.2 Clear-A-Fraction Policy *89*
5.2.3 Clear-Average-Oldest-Buffer Policy *92*
5.2.4 Random Part Selection Policy *95*
5.2.5 Characterization of the Output Stream *98*
5.2.6 Network Element Analysis *98*
5.3 Stability of Distributed FMS *106*
5.3.1 Modeling the FMS *106*
5.3.2 Designing Stable Distributed FMS *108*
5.3.3 Computing the Buffer Bounds *112*
5.3.4 Artificial Implementation of the Stream Modifiers *113*
5.3.5 Buffer Bounds: Theoretical and Simulated *113*
5.4 FMS Scheduling: A Centralized Approach *114*
5.4.1 FMS Description and Notation *115*
5.4.2 Global Synchronous Clear-A-Fraction Policy *117*
5.4.3 Global Synchronous Periodic Clearing Policy *123*
5.5 Scheduling Examples: Centralized vs. Distributed *130*
5.5.1 Highly Re-entrant Line *131*
5.5.2 Feedforward Line *133*
5.5.3 Cellular Structure I *134*
5.5.4 Cellular Structure II *138*
5.5.5 Alternatives to GSCLB *140*
5.6 Summary *142*
5.7 For Further Study *142*
5.8 Problems *143*

6 Intelligent Control Systems **147**
6.1 Overview *147*
6.2 Expert Control Systems *148*
6.2.1 The Expert Controller *149*
6.2.2 The Expert Control System: Model and Approaches to Analysis *160*
6.2.3 Expert System Verification *165*

6.2.4 Expert Control of a Surge Tank 166
6.2.5 Expert Control of a Flexible Manufacturing System 172
6.3 Planning Systems for Control 180
6.3.1 Planners as Controllers 180
6.3.2 Analysis of Closed-Loop Planning Systems 181
6.4 Intelligent and Autonomous Control 182
6.5 Hybrid System Theory and Analysis 187
6.6 Summary 188
6.7 For Further Study 188
