Preface

PART I. LINEAR OPTIMIZATION

Chapter 1. Introduction	3
1.1. Some Linear Optimization Models	4
1.2. Definition of a Linear Optimization Model	11
1.3. A Look Ahead Problems	12 13
Chapter 2. Formulation of Linear Optimization Models	16
2.1. Mixing Problems	17
2.2. Models for Production Processes	22
2.3. Input–Output Analysis of Interindustry Problems	26
2.4. Assumptions of Linear Optimization Models Problems	30 33
Chapter 3. The Simplex Algorithm	39
3.1. Solving Systems of Linear Equations	40
3.2. The Simplex Algorithm for a Production Type Model	52
3.3. The Simplex Algorithm for a Model in Basic Form Computer Programming Projects Problems	60 69 70

Chapter 4. The Simplex Algorithm: Further Topics	76
4.1. The Reduction of a General Model to a Model in Standard Form	77
4.2. The Reduction of a Model in Standard Form to a Model in Basic Form	81
4.3. Computer Implementation: The Revised Simplex Algorithm	90
4.4. Justification of the Simplex Algorithm	101
References	110
Computer Programming Projects	111
Problems	111
 PART II. FURTHER TOPICS IN LINEAR OPTIMIZATION 	
Chapter 5. Postoptimal Analysis and Duality Theory	119
5.1. Marginal Analysis	120
5.2. The Dual Simplex Algorithm	128
5.3. Postoptimal Analysis of Specific Changes	136
5.4. Duality Theory	149
References	157
Computer Programming Projects	157
Problems	157
Chapter 6. Transportation Models and Related Types of Models	163
6.1. Formulation of Transportation Models	163
6.2. The Transportation Algorithm	169
6.3. Related Types of Models	190
References	207
Problems	208
Chapter 7. Multiperiod Models for Production and Inventory	213
7.1. A Basic Multiperiod Model	214
7.2. Multiperiod Models with Additional Features	218
7.3. Separable Convex Programming	229
Problems	239
Chapter 8. Integer Programming Models	244
8.1. Formulation of Integer Programming Models	246
8.2. Analysis of Integer Programming Models	258
8.3. Refinements in the Branch and Bound Method	268
References	278
Problems	278

PART III. DECISION ANALYSIS

Chapter 9. Probability: The Quantification of Uncertainty	287
9.1. Probability Concepts	288
9.2. Conditional Probability	293
9.3. Probability Distributions	300
References	309
Problems	309
Chapter 10. Decision Making under Uncertainty	314
10.1. Decision Models without Experimentation	314
10.2. Assessing Probability Distributions	317
10.3. Decision Models with Experimentation	326
10.4. An Example of New Product Development	336
References	342
Computer Programming Projects	342
Problems	343
Chapter 11. Value and Utility: The Quantification of Preferences	348
11.1. The Concepts of Value and Utility	350
11.2. The Utility of Monetary Consequences	357
11.3. The Value of Multiattribute Consequences	382
11.4. Multiobjective Decision Problems and Goal Programming	393
References	401
Problems	401
Chapter 12. Statistical Decision Theory	407
12.1. General Decision Models	407
12.2. Optimal Actions in Special Types of Models	416
12.3. Bernoulli Processes	423
12.4. Optimal Sampling in Special Types of Models	433
References	444
Computer Programming Projects	444
Problems	444
Index	449
