

Hans Kelker/Rolf Hatz

# Handbook of Liquid Crystals

With a Contribution by

Christian Schumann

Eigentum der Firma  
Kurt Eichweber  
Hamburg-Altona

Verlag Chemie

Weinheim · Deerfield Beach, Florida · Basel · 1980

# *Contents – a Summary*

1 Microscopic Investigations Including Basic Concepts, Phenomenology, and Morphology . . . . .	1
2 Chemical Constitution . . . . .	33
3 Theory of the Liquid-Crystalline State . . . . .	115
4 Behavior in Magnetic and Electric Fields . . . . .	155
5 X-Ray and Neutron Scattering, Positron Annihilation, Mössbauer Investigations, and Cherenkov Radiation . . . . .	221
6 Optical Properties of Optically Inactive Mesophases . . . . .	253
7 Optical Properties of Optically Active Mesophases . . . . .	293
8 Thermodynamic Properties . . . . .	339
9 Liquid Crystals as Solvents in Gas Chromatography and in Chemical Reactions . . . . .	385
10 Nuclear Magnetic Resonance and Electron Spin Resonance Studies (by Ch. Schumann) . . . . .	425
11 Lyotropic Mesomorphism . . . . .	511
12 Liquid Crystals in Living Systems . . . . .	553
13 Liquid-Crystalline Order in Polymers . . . . .	593
14 Technical Applications . . . . .	603
15 History, Reviews, and Books . . . . .	627
References . . . . .	633
Subject Index . . . . .	899
Legal Note . . . . .	911

# *Contents*

<b>1</b>	<b>Microscopic Investigations Including Basic Concepts, Phenomenology, and Morphology . . . . .</b>	1
1.1	Introduction . . . . .	2
1.2	Polymorphism . . . . .	5
1.3	Solid Surface Boundary Action . . . . .	11
1.4	Textures in Nematic Phases . . . . .	13
1.4.1	Homogeneous Texture . . . . .	13
1.4.2	Homeotropic Texture . . . . .	14
1.4.3	Schlieren Texture (Centered Texture) . . . . .	16
1.4.4	Nematic Droplets . . . . .	19
1.4.5	Mauguin Texture and Nematic-Cholesteric Phases . . . . .	21
1.5	Textures in Smectic Phases . . . . .	26
1.6	Lyotropic Mesophases . . . . .	28
1.7	Selected Mesogens . . . . .	30
<b>2</b>	<b>Chemical Constitution . . . . .</b>	33
2.1	Structural Features . . . . .	34
2.2	Aromatic and Heteroaromatic Rings . . . . .	37
2.2.1	Linear Molecules . . . . .	37

2.2.2	Sheet Molecules (Platelets, Disc-Shaped Molecules)	40
2.2.3	Heteroaromatic Rings	40
2.3	Bridging Groups	41
2.3.1	Azomethines	43
2.3.2	Azo Compounds	44
2.3.3	Azoxy Compounds	45
2.3.4	Biphenyl Compounds	45
2.4	Terminal Groups and Homologous Series	46
2.5	Broadening of Molecules	55
2.6	Aromatic Carboxylic Acids	59
2.7	Carboxylic Acid Salts and Ammonium Salts	60
2.8	Steroids	61
2.9	Aliphatic Compounds	66
2.10	Inorganic and Miscellaneous Compounds	66
2.11	Conclusion	67
2.12	Classification of Mesogens	67
2.13	Table of Mesogens	69
<b>3</b>	<b>Theory of the Liquid-Crystalline State</b>	115
3.1	Introduction	116
3.2	The Continuum Theory	117
3.3	Explanation of Some Texture Characteristics	120
3.4	The Maier-Saupe Theory (Mean-Field Approximations)	128
3.5	Hydrodynamics, Equilibrium Theories	134
3.6	The de Gennes Theory	138
3.7	Pretransition Phenomena	141
3.8	Viscosity and Flow Studies	142
3.9	Diffusion and Heat Conductivity	145
3.10	Ultrasonic Studies	146
3.11	Surface and Interface Properties	152
<b>4</b>	<b>Behavior in Magnetic and Electric Fields</b>	155
4.1	Nematic Phases in Magnetic Fields	158
4.1.1	Magnetic Susceptibility	159
4.1.2	Elastic Deformation (Frederiks Deformation)	160
4.1.3	Action of a Rotating Magnetic Field (Tsvetkov Effect)	163
4.1.4	Thermal Effects of a Magnetic Field (Moll-Ornstein Effect)	164
4.1.5	Optical Rotatory Power and Linear Electro-Optical Effect	165
4.1.6	Other Investigations in Magnetic Fields	167
4.1.7	Cotton-Mouton Effect	167

4.2	Cholesteric Phases in Magnetic Fields . . . . .	168
4.2.1	Helical Unwinding . . . . .	168
4.2.2	Periodic Deformations . . . . .	169
4.2.3	Elastic Deformation . . . . .	171
4.2.4	Storage Effect . . . . .	172
4.3	Smectic Phases in Magnetic Fields . . . . .	173
4.4	Nematic Phases in Electric Fields . . . . .	174
4.4.1	Dielectric Susceptibility; Dielectric Constants . . . . .	174
4.4.2	Electric Conductivity . . . . .	182
4.4.3	Elastic Deformation of Ordinary Nematics (Frederiks Deformation) . . . . .	186
4.4.4	Elastic Deformation of Twisted Nematics (Schadt-Helfrich Mode, TN Devices) . . . . .	192
4.4.5	Electrohydrodynamic Instabilities . . . . .	192
4.4.5.1	Electrochemical Behavior . . . . .	193
4.4.5.2	Periodic Deformations, Type Williams Domains . . . . .	194
4.4.5.3	Dynamic Scattering Mode (DSM) . . . . .	196
4.4.5.4	Theory of Electrohydrodynamic Instabilities . . . . .	198
4.4.5.5	Special Observations . . . . .	201
4.4.6	Fast Turn-off Mode . . . . .	203
4.4.7	Curvature Electricity (Piezo- or Flexo-electricity) . . . . .	203
4.4.8	Ferroelectric Effects . . . . .	204
4.4.9	Phase Transitions in External Fields . . . . .	204
4.4.10	Kerr Effect . . . . .	206
4.5	Cholesteric Phases in Electric Fields . . . . .	207
4.5.1	Dielectric Susceptibility; Dielectric Constants . . . . .	207
4.5.2	Electric Conductivity . . . . .	210
4.5.3	Electro-Optical Effects . . . . .	211
4.5.3.1	Storage Modes . . . . .	212
4.5.3.2	Periodic Deformations . . . . .	212
4.5.3.3	Helical Unwinding . . . . .	213
4.5.3.4	Conical Deformation, Blue Shift Mode . . . . .	215
4.5.3.5	Special Observations . . . . .	216
4.6	Smectic Phases in Electric Fields . . . . .	217
4.6.1	Dielectric Constants . . . . .	217
4.6.2	Electric Conductivity . . . . .	217
4.6.3	Electric Deformations . . . . .	218
<b>5</b>	<b>X-Ray and Neutron Scattering, Positron Annihilation, Mössbauer Investigations, and Cherenkov Radiation . . . . .</b>	<b>221</b>
5.1	X-Ray Scattering . . . . .	222
5.2	X-Ray Studies of Special Mesophases . . . . .	231
5.2.1	Nematic Phases . . . . .	231
5.2.2	Cholesteric Phases . . . . .	234
5.2.3	Smectic Phases . . . . .	236
5.2.4	Mesophases of Carboxylic Acid Salts . . . . .	240
5.3	Neutron Scattering . . . . .	242

5.4	Positron Annihilation . . . . .	246
5.5	Mössbauer Investigations . . . . .	248
5.6	Cherenkov Structure Radiation . . . . .	249
5.7	Bibliography of X-Ray Studies on Liquid Crystals . . . . .	250
<b>6</b>	<b>Optical Properties of Optically Inactive Mesophases</b> . . . . .	253
6.1	Birefringence . . . . .	254
6.1.1	Experimental Results . . . . .	255
6.1.2	Theoretical Considerations . . . . .	259
6.1.3	Special Refractive Modes . . . . .	262
6.2	Rayleigh Scattering . . . . .	262
6.2.1	Nematic Liquid Crystals . . . . .	262
6.2.2	Smectic Liquid Crystals . . . . .	268
6.2.3	Pretransition Phenomena . . . . .	269
6.3	UV- and Visible Absorption Spectroscopy . . . . .	272
6.4	Fluorescence Spectroscopy . . . . .	279
6.5	IR Spectroscopy . . . . .	281
6.5.1	Nematic Phases . . . . .	281
6.5.2	Smectic and Other Mesophases . . . . .	285
6.6	Raman Scattering . . . . .	287
6.6.1	Nematic Phases . . . . .	287
6.6.2	Smectic and Other Mesophases . . . . .	289
6.7	Brillouin Scattering . . . . .	290
<b>7</b>	<b>Optical Properties of Optically Active Mesophases</b> . . . . .	293
7.1	Selective Reflection and Optical Activity . . . . .	294
7.1.1	Helical Structures . . . . .	295
7.1.2	Basic Observations . . . . .	296
7.1.3	Theory of Light Propagation . . . . .	301
7.1.4	Influence of Temperature and Pressure . . . . .	310
7.1.5	Special Observations . . . . .	312
7.1.6	Behavior of Mixtures . . . . .	315
7.2	UV- and Visible Absorption Spectroscopy . . . . .	322
7.3	Fluorescence Spectroscopy . . . . .	326
7.4	IR Spectroscopy . . . . .	327
7.5	Raman Scattering . . . . .	329
7.6	Birefringence . . . . .	330
7.7	Rayleigh Scattering . . . . .	332
7.8	Brillouin Scattering . . . . .	332
7.9	Nonlinear Optics . . . . .	334

7.10	Other Optical Observations . . . . .	335
7.11	Twisted Nematic Phases . . . . .	335
7.12	Twisted Smectic Phases . . . . .	336
<b>8</b>	<b>Thermodynamic Properties . . . . .</b>	<b>339</b>
8.1	Classification of Phase Transitions . . . . .	340
8.2	Theory of Phase Transitions . . . . .	343
8.3	Pretransition Phenomena . . . . .	351
8.4	Calorimetric Measurements . . . . .	354
8.4.1	Molar Heat . . . . .	355
8.4.2	Transition Enthalpy and Entropy . . . . .	357
8.5	Kinetics of Phase Transitions, Glassy State . . . . .	364
8.6	Temperature-Dependence of Density . . . . .	366
8.7	High-Pressure Investigations . . . . .	370
8.8	Mixed Systems with Mesophases . . . . .	372
8.8.1	Mixtures of an Enantiotropic Mesogenic Substance with a Monotropic or Non-mesogenic Substance . . . . .	372
8.8.2	Mixtures of Two Enantiotropic Mesogenic Substances . . . . .	376
<b>9</b>	<b>Liquid Crystals as Solvents in Gas Chromatography and in Chemical Reactions . . . . .</b>	<b>385</b>
9.1	Liquid Crystals in Gas Chromatography . . . . .	386
9.1.1	Experimental Results . . . . .	387
9.1.1.1	First Statement . . . . .	392
9.1.1.2	Second Statement . . . . .	394
9.1.1.3	Third Statement . . . . .	395
9.1.1.4	Summary . . . . .	395
9.1.2	Models and Theory . . . . .	398
9.1.2.1	Theoretical Background . . . . .	398
9.1.2.2	The Regular-Solution Concept . . . . .	400
9.1.2.3	The Entropic Part of $f$ . . . . .	401
9.1.2.4	The Free Energy Concept . . . . .	403
9.1.2.5	The Liquid-Crystalline/Isotropic Transition as a Corresponding-State Condition . . . . .	406
9.1.2.6	Pretransition Phenomena . . . . .	409
9.2	Chemical Reactions in Anisotropic Liquids . . . . .	412
9.2.1	Thermotropic Mesophases . . . . .	412
9.2.2	Polymerization Reactions in Thermotropic Mesophases . . . . .	415
9.2.3	Lyotropic Mesophases . . . . .	422
<b>10</b>	<b>Nuclear Magnetic Resonance and Electron Spin Resonance Studies . . . . .</b>	<b>425</b>
