Daniel Benest Claude Froeschlé (Eds.)

Impacts on Earth

Springer

Contents

Part I Origin and Dynamics of Projectiles

Catastrophic Collisions in the Asteroid Belt – The Identification of Dynamical Families
A. Cellino and Ph. Bendjoya 3

1. Introduction 4
2. How to Identify Families 7
3. Two Independent Clustering Methods 12
   3.1. The Hierarchical Clustering Method 13
   3.2. The Wavelet Analysis Method 14
4. A "Quality Check" 15
5. The Most Recent Results 20
6. Conclusions 27
   References 28

Origin and Dynamical Transport of Near-Earth Asteroids and Meteorites
A. Morbidelli and Ch. Froeschlé 31

1. Introduction 31
2. Geometry of Orbits 32
3. The Secular Resonances 34
4. Mean Motion Resonances 39
5. Transport of Planet-Crossing Objects by Planetary Close Encounters 43
6. Evolution Timescales and Orbital Distribution of NEAs 44
   6.1. Dynamical Lifetimes 45
   6.2. Steady State and Asteroid Showers 48
   6.3. Orbital Distribution 50
7. Conclusions 50
   References 52

Topics on Chaotic Transport for Hamiltonian Systems – Modelling of Diffusion Processes for Small Bodies in the Solar System
C. Froeschlé and E. Lega 54

1. General Introduction 54
2. Stochastic Mappings in Astrodynamics 55
   2.1. Introduction 55
   2.2. Exogenous Stochastic Mappings 55
   2.3. Endogenous Stochastic Mappings 56
3. Another Approach: The Synthetic Mapping 60
   3.1. A Local Exact Fitting 61
   3.2. A Global Fitting: The Least Square Interpolation 63
   3.3. Preliminary Conclusions 64
4. Conclusion 64
   References 65

Collisional Disruption of Natural Satellites
P. Farinella 67

1. Introduction 67
2. Giant Craters 68
3. Irregular Shapes 69
4. Association with Rings 70
5. Dynamical "Natural Selection" 72
   References 74

Part II Physics of Shocks

Concepts of Shock Waves
A. Migault 79

1. Shock Waves: Definition and Formation 80
   1.1. Properties of Sonic Waves 80
   1.2. Formation of a Shock Wave 81
2. Rankine-Hugoniot Equations (Conservation Laws) 82
   2.1. Conservation of Mass, Momentum and Energy in the Laboratory Frame 82
   2.2. The Same in the Shock Front Frame 83
   2.3. The Same in Special Relativity 84
3. Hugoniot Curve and Its Representation in the (P, u_p) Plane 85
4. Comments on Conservation Laws and Relative Position of Hugoniot and Isentropic Curves in the (P, V) Plane 86
   4.1. Comments on Conservation Laws 86
   4.2. Position of Hugoniot Curve (H) Relatively to Isentropic Curves in the (P, V) Plane 88

5. Experimental Results 90
5.1. Some Experimental Results on Simple Metals 90
5.2. Relation Between U_S (Shock Wave Velocity) and u_p (Particular Velocity) 90
5.3. Some Results on Geological Materials 94
5.4. Numerical Compendiums 94
6. Hydrodynamic Attenuation 96
6.1. Hydrodynamic Decay of Pressure Pulses 97
7. Shock Transmission Between Two Media 98
7.1. Reflected Shock Waves 100
7.2. Reflected Release Waves 100
7.3. Equilibrium State at the Interface 101
7.4. Approximation on Curves H_1' and S_1- 101
8. Planar Impact of Projectile on Semi-infinite and Massive Target at Rest 101
8.1. Chronology of Events 102
8.2. Theory 103
8.3. Numerical Examples 105
9. Equation of State and Temperature Evaluation 106
9.1. Mie-Gruneisen Equation of State 106
9.2. Temperature Behind a Shock Front. Low Pressure 107
9.3. Temperature Behind a Shock Front. High Pressure 108
9.4. Numerical Applications 109
9.5. Release from the Shocked State. Residual Temperature 109
9.6. Isentropic Curve from the Initial State 110
9.7. Comments 111
References 111

The Experimental and Theoretical Basis for Studying Collisional Disruption in the Solar System
D.R. Davis 113

1. Introduction 114
2. Laboratory Experiments 115
2.1. Experimental Facilities 115
2.2. The Experiments 116
3. Scaling Algorithms and Fragmentation Outcome Models 127
4. Numerical Algorithms for Calculating Collisional Outcomes 131
5. Areas for Future Work 133
References 134

Signatures of Impacts in Quartz (Microstructures and Formation Mechanisms)
J.C. Doukhan 137

1. Introduction 137

2. Lattice Defects Produced by Tectonic Processes 138
3. Shock-Induced Lattice Defects in Quartz 142
3.1. Mechanical Twinning 143
3.2. Planar Deformation Features 146
4. A Formation Model for PDFs 148
4.1. Amorphization 149
References 153

Part III Terrestrial Impacts

Dating of Impact Events
U. Schärer 157

1. Introduction 158
2. Some Numbers and Definitions 159
3. Geological Dating Methods 160
3.1. Crater Counting 160
3.2. Bio-magnetostratigraphy and Paleomagnetism 161
4. Nuclear Dating Methods 161
4.1. General Aspects 161
4.2. Thermoluminescence 162
4.3. Cosmogenic Nuclides 162
4.4. Fission Track Dating 163
4.5. Radioactive Decay 164
5. Shock Wave Metamorphism 167
5.1. General Aspects 167
5.2. Coherent Impact Melt Layers 169
5.3. The Crater Basement 169
5.4. Allochthonous Breccia Deposits 170
5.5. Distant Ejecta 171
6. Implications from Experiments 171
7. Dating and Sample Selection 171
7.1. Geological Frame 171
7.2. Coherent Impact Melt Layers 173
7.3. Allochthonous Breccia Deposits 173
7.4. Crater Basement 174
7.5. Distant Ejecta Deposits 175
8. Examples 176
8.1. Impactites of the Crater Area 176
8.2. Distant Ejecta, and the Cretaceous/Tertiary (K/T) Boundary . 177
8.3. Crater Basement 181
References 181

Impact Energy Flux on Earth in the Last 150 My as Inferred from the Cratering Record
A.C. Bagatin, A. Montanari and P. Farinella 184

1. Introduction 185
2. The Cratering Record and Its Uncertainties 185
3. Impact Energy Flux Analysis 190
   3.1. Cratering Energy Scaling 190
   3.2. Energy Flux 192
   3.3. Distribution of Impact Times 193
4. Discussion 195
   References 197

Earth-Orbiting Debris Cloud and Its Collisional Evolution
A. Rossi and P. Farinella 199

1. Introduction 200
2. The Near-Earth Environment and the Space Surveillance 201
3. Long-Term Evolution of the Debris Population 206
   3.1. Source and Sink Mechanisms 207
   3.2. Long-Term Evolution Model 213
4. Policy Issues and Conclusions 219
5. Post-Scriptum 221
   References 222
