
INTRODUCTION TO OPTICAL ENGINEERING

FRANCIS T. S. YU

Pennsylvania State University

XIANGYANG YANG

University of New Orleans

CAMBRIDGE
UNIVERSITY PRESS

TABLE OF CONTENTS

<i>Preface</i>	<i>page</i>	<i>xiii</i>
1	PRINCIPLES OF REFLECTION AND REFRACTION	1
1.1	Snell's Law of Refraction	1
1.2	Huygens' Principle	5
1.3	Refraction and Reflection	7
1.4	Spherical Wave and Image Formation	9
1.5	Total Reflection and Dispersion	14
1.6	Polarization	21
1.7	Polarizers	26
1.8	Fresnel Equations of Reflection	28
	References	32
	Problems	32
2	LENSES AND ABERRATIONS	36
2.1	Image Formation	36
2.2	Simple Lenses	41
2.3	Phase Retardation by Thin Lenses	45
2.4	Primary Aberrations	51
2.5	Resolution Limit	58
	References	62
	Problems	62
3	OPTICAL INSTRUMENTS	66
3.1	The Human Eye	66
3.2	Camera and Photographic Film	70
3.2.1	Camera	71

3.2.2	Photographic Film	72
3.3	Telescope	76
3.4	Microscope	79
3.5	Projection Systems	83
	References	86
	Problems	87
4	DETECTORS	89
4.1	Photoconductive Detectors	89
4.2	Semiconductor Photodiodes	92
4.2.1	The <i>p-n</i> Junction	92
4.2.2	Junction Photodiodes	94
4.3	PIN and Avalanche Photodiodes	96
4.3.1	PIN Diodes	97
4.3.2	Avalanche Photodiodes	98
4.4	Photomultipliers	98
4.5	Charge Coupled Devices	101
4.6	Noise and Sensitivity of Electro-optic Detectors	103
4.6.1	Video Detection Mode	104
4.6.2	Heterodyne Detection Mode	106
	References	109
	Problems	109
5	SPATIAL LIGHT MODULATORS	111
5.1	Acousto-optic modulators	112
5.2	Magneto-optic modulators	114
5.3	Pockel's Readout Optical Modulators	116
5.4	Liquid Crystal Light Valves	119
5.5	Liquid Crystal Television	122
5.6	Microchannel Plate Spatial Light Modulators	124
5.7	Photoplastic Devices	127
5.8	Deformable Mirror Array Devices	129
5.9	Optical Discs	130

5.10	Photorefractive Crystals	133
	References	136
	Problems	136
6	LASERS	141
6.1	Quantum Behavior of Light	141
6.2	Spontaneous and Stimulated Emission	143
6.3	Population Inversion	147
6.3.1	Three- and Four-level Lasers	147
6.3.2	Optical and Electric Pumping	149
6.4	Optical Resonant Cavity	150
6.5	Modes of Laser Beam	154
6.5.1	Longitudinal Mode	154
6.5.2	Transverse Mode	157
6.6	Spectral Bandwidth and Coherence Length	158
6.7	Types of Lasers	160
6.7.1	Gas Laser	161
6.7.2	Solid State Laser	162
6.7.3	Semiconductor Laser	164
	References	167
	Problems	167
7	LINEAR SYSTEM TRANSFORMS	170
7.1	Linear Spatially Invariant System	170
7.2	Fourier Transformation and Fourier Spectrum	174
7.3	Dirac Delta Function	178
7.4	Convolution and Correlation	181
7.4.1	Convolution	181
7.4.2	Correlation	185
7.5	Properties of Fourier Transformation	189
7.5.1	Fourier Translation Property	189
7.5.2	Reciprocal Translation Property	191
7.5.3	Scale Changes of Fourier Transforms	193

	7.5.4	Convolution Property	195
	7.5.5	Cross-correlation Property	197
	7.5.6	Autocorrelation Property	199
	7.5.7	Conservation Property	201
	7.5.8	Symmetric Properties	202
		References	203
		Problems	203
8		DIFFRACTION	207
	8.1	Fraunhofer and Fresnel Diffractions	207
	8.2	The Fresnel–Kirchhoff Integral	210
	8.3	Fourier Transform in Fraunhofer Diffraction	214
	8.4	The Fresnel Zone Plate	217
	8.5	Partial Coherence	222
	8.6	Spatial and Temporal Coherence	228
		8.6.1 Spatial Coherence	229
		8.6.2 Temporal Coherence	231
	8.7	Coherence Measurement	235
		References	239
		Problems	240
9		INTERFERENCE	245
	9.1	Condition for Interference	245
	9.2	Young’s Experiment	249
	9.3	Visibility of Fringes	251
	9.4	Michelson Interferometer	253
	9.5	Mach–Zehnder Interferometer	257
	9.6	Two-beam Interference with Dielectric Plates	260
	9.7	Multiple Beam Interference	264
	9.8	Optical Thin Film	268
		References	272
		Problems	272

10	HOLOGRAPHY	275
10.1	On-axis Holography	276
10.2	Off-axis Holography	282
10.3	Holographic Magnifications	291
10.4	Reflection Holography	295
10.5	Rainbow Holography	299
10.6	One-step Rainbow Holograms	305
10.7	Color Holography	310
10.8	Photorefractive Holograms	312
	References	316
	Problems	316
11	SIGNAL PROCESSING	323
11.1	An Optical System Under Coherent and Incoherent Illumination	323
11.2	Coherent Optical Signal Processing	329
11.3	Synthesis of a Complex Spatial Filter	333
11.4	The Joint Transform Correlator	337
11.5	White-light Optical Signal Processing	341
11.6	Hybrid Optical Signal Processing	346
11.7	Photorefractive Matched Filters	350
	References	354
	Problems	354
12	FIBER OPTICS	360
12.1	Fiber Construction	360
12.2	Fiber Waveguides	363
12.3	Modal Description	369
12.4	Types of Optical Fiber	373
12.5	Optical Fiber Communications	376
12.5.1	Fiber Communication Systems	377
12.5.2	Splices and Connectors	378
12.5.3	Couplers and Switches	380
12.5.4	Time- and Wavelength-division Multiplexing	383

12.6	Coherent Light Wave Communication	386
12.7	Fiber Sensors	390
12.7.1	Intensity Attenuation Fiber Sensors	391
12.7.2	Interferometric Fiber Sensors	393
12.7.3	Fiber Specklegram Sensors	395
	References	399
	Problems	399
