

Manfred Salmhofer

Renormalization

An Introduction

With 24 Figures

Springer

Table of Contents

1.	Field Theory	1
1.1	A Motivation for Path Integrals	1
1.2	Gaussian Integrals and Random Variables	6
1.2.1	Preliminaries	6
1.2.2	Gaussian Integrals in Finitely Many Variables	7
1.2.3	The Covariance Splitting Formula	10
1.3	Field Theory on a Lattice	11
1.3.1	Discretization	12
1.3.2	The Partition Function and Correlations	15
1.3.3	The Ising Model	17
1.4	Free Fields	19
1.5	Properties of the Free Covariance	21
1.6	Problems With and Without Cutoffs	23
2.	Techniques	27
2.1	Integration by Parts	27
2.2	Wick Ordering	28
2.2.1	Definition and Main Properties	28
2.2.2	Further Results	30
2.3	Evaluation of Gaussian Integrals	33
2.3.1	Labelled Feynman Graphs	33
2.3.2	Symmetry Factors and Topological Feynman Graphs	38
2.3.3	Motivations for Taking the Logarithm	39
2.4	Polymer Systems	41
2.4.1	Preparation: Graphs and Partitions	42
2.4.2	The Logarithm of the Polymer Partition Function	44
2.5	The Effective Action and Connected Graphs	47
2.5.1	Definition and Semigroup Property	47
2.5.2	Derivation of the Graphical Representation	49
2.5.3	Result and Discussion	55
2.6	Graphical Representations: Conclusions	57

VIII Table of Contents

3. The Renormalization Group	63
3.1 A Cutoff in Momentum Space	64
3.2 The Semigroup Structure of Renormalization	65
3.3 The Renormalization Group Equation	68
3.3.1 The Functional Form	68
3.3.2 The Component Form	69
3.4 The Structure of the RG equation	72
3.4.1 The Graphical Representation	72
3.4.2 The Relation to the Feynman Graph Expansion	74
3.4.3 The Continuum Limit at Fixed Λ_0	74
3.5 Differential Inequalities.....	75
3.6 Two Dimensions.....	78
3.6.1 Boundedness.....	78
3.6.2 ϕ_2^4	80
3.6.3 Convergence	82
3.7 Three Dimensions	85
3.7.1 Power Counting for the Truncated Equation	86
3.7.2 Renormalization: A Change of Boundary Conditions ..	88
3.7.3 Renormalized ϕ_3^4	91
3.8 Four Dimensions	99
3.8.1 Counterterms in Second Order	99
3.8.2 Power Counting (Skeleton Flow)	102
3.8.3 The Boundary Conditions for Renormalization	103
3.8.4 Renormalized ϕ^4 Theory	105
3.9 The RG Flow in the Ladder Approximation.....	109
4. The Fermi Surface Problem	113
4.1 Physical Motivation.....	113
4.2 Many-Fermion Systems on a Lattice	114
4.2.1 The Hamiltonian	115
4.2.2 The Grand Canonical Ensemble	118
4.2.3 The Fermi Gas	119
4.2.4 The Functional Integral Representation	123
4.2.5 RG Flow: Energy Scales	125
4.2.6 Model Assumptions	126
4.2.7 The Physical Significance of the Assumptions	128
4.2.8 The Role of the Initial Energy Scale	129
4.3 The Renormalization Group Differential Equation	130
4.3.1 The Effective Action	130
4.3.2 The RG Equation	131
4.3.3 The Component RGE in Fourier Space	136
4.4 Power Counting for Skeletons	137
4.4.1 Bounds for the Infinite-Volume Propagator	137
4.4.2 Sup Norm Estimates	139
4.4.3 Estimates in L^1 Norm	142

4.5	The Four-Point Function	145
4.5.1	Motivation	146
4.5.2	The Parquet Four-Point Function	147
4.5.3	The One-Loop Volume Bound.	149
4.5.4	The Particle–Particle Flow	151
4.5.5	The Particle–Hole Flow	155
4.5.6	The Combined Flow	157
4.6	Improved Power Counting	157
4.6.1	Overlapping Loops	157
4.6.2	Volume Improvement from Overlapping Loops	160
4.6.3	Volume Improvement in the RGE	161
4.6.4	Bounds on the Non-Ladder Skeletons	162
4.6.5	The Derivatives of the Skeleton Selfenergy	165
4.7	Renormalization Subtractions	167
4.7.1	Motivation; the Counterterm	167
4.7.2	Full Amputation	168
4.7.3	Bounds for a Truncation	170
4.7.4	The Meaning of K	173
4.8	Conclusion	175
4.8.1	Summary	175
4.8.2	A Fermi Liquid Criterion	176
4.8.3	How the Curvature Sets a Scale	178
A.	Appendix to Chapters 1–3	181
A.1	A Topology on the Ring of Formal Power Series	181
A.2	Fourier Transformation	181
A.3	Properties of the Boson Propagator	184
A.4	Wick Reordering for Bosons	185
A.5	The Lower Bound for the Sunset Graph	189
B.	Appendix to Chapter 4	191
B.1	Fermionic Fock Space	191
B.2	Calculus on Grassmann Algebras	192
B.3	Grassmann Gaussian Integrals	196
B.4	Gram’s Inequality; Bounds for Gaussian Integrals	198
B.5	Grassmann Integrals for Fock Space Traces	201
B.5.1	Delta Functions and Integral Kernels	202
B.5.2	The Formula for the Trace	204
B.5.3	The Time Continuum Limit	205
B.5.4	Nambu Formalism	212
B.5.5	Matsubara Frequencies	213
B.6	Feynman Graph Expansions	214
B.7	The Thermodynamic Limit in Perturbation Theory	217

X Table of Contents

B.8	Volume Improvement Bounds	220
B.8.1	The One-Loop Volume Bound	220
B.8.2	The Two-Loop Volume Bound	222
