

Hendrik C. Kuhlmann

Thermocapillary Convection in Models of Crystal Growth

With 101 Figures

Springer

Contents

1. Introduction	1
1.1 Marangoni Effect	1
1.2 Thermocapillary Convection in Crystal Growth	3
1.3 Previous Reviews	5
1.4 Scope	7
2. Basic Equations	11
2.1 Volume Equations	11
2.2 Boundary Conditions	11
2.2.1 Velocity Field	11
2.2.2 Temperature Field	12
2.3 Dimensionless Equations	13
3. Asymptotic Behavior	19
3.1 Flow Near the Contact Line	19
3.2 Boundary-Layer Scalings	25
3.2.1 Low-Prandtl-Number Inertial Flow	26
3.2.2 Boundary Layers Near the Cold Corner	27
3.2.3 High-Prandtl-Number Thermocapillary Flow in a Hot Corner (Viscous-Convective Limit)	30
4. Creeping Flow in Thermocapillary Liquid Bridges	35
4.1 Method of Biorthogonal Functions	36
4.2 Thermocapillary Flow and Small Surface Deformations	40
4.2.1 Formulation	40
4.2.2 Flow Field	41
4.2.3 Temperature Field	42
4.2.4 Dynamic Surface Deformations	43
4.2.5 Flow Patterns	44
4.2.6 Aspect Ratio Limits	49
4.3 Axial Through Flow	51

5. Concepts of Stability Analysis	59
5.1 Linear Stability	59
5.1.1 Temporal and Spatial Stability	61
5.1.2 Convective and Absolute Stability	62
5.2 Energy Analysis	64
5.2.1 Reynolds–Orr Equation	64
5.2.2 Energy Equations for Infinitesimal Perturbations	66
5.3 Energy Stability	67
5.4 A Posteriori Energy Balances	69
6. Plane Thermocapillary Layers	71
6.1 Convective Stability of the Return Flow	71
6.2 Asymptotics of the Critical Values for $Pr \rightarrow 0$	80
7. Convection in Cylindrical Geometry	83
7.1 Axisymmetric Convection in Liquid Bridges	83
7.2 Linear Stability Analysis	89
7.3 Buoyant Instability	91
7.3.1 Small Prandtl Numbers: $Pr = 0.02$	95
7.3.2 Large Prandtl Numbers: $Pr = 1$	99
7.4 Thermocapillary Instability	104
7.4.1 Small Prandtl Numbers: $Pr = 0.02$	107
7.4.2 Large Prandtl Numbers: $Pr = 4$	111
7.4.3 Remarks on the Stability of Pure Thermocapillary Flows	117
7.5 Instability of Mixed Convection	119
7.5.1 Thermocapillarity Dominating	119
7.5.2 Buoyancy Dominating	123
7.6 Experimental Background	128
7.7 Three-Dimensional Simulations	132
7.7.1 Low Prandtl Numbers	133
7.7.2 High Prandtl Numbers	135
7.8 Energy Stability Analyses	140
8. Convection in Rectangular Geometry	143
8.1 Two-Dimensional Flows	145
8.1.1 Short Containers ($\Gamma \leq 1$)	145
8.1.2 Stationary Flow in Long Containers ($\Gamma \gg 1$)	147
8.1.3 Two-Dimensional Oscillatory Flows	151
8.2 Three-Dimensional Flows	154
8.2.1 Large Aspect Ratios	154
8.2.2 Side-wall Effects	154
8.2.3 Steady and Spatially Periodic Three-Dimensional Flows	158

9. Extensions to Simple Models	163
9.1 Intrinsic Properties of Thermocapillary Systems	163
9.1.1 Static Free-Surface Shape	163
9.1.2 Dynamic Surface Deformations	168
9.1.3 Non-Monotonic Surface Temperature Profiles	169
9.1.4 Moving Liquid-Solid Interfaces	171
9.1.5 Temperature-Dependent Material Parameters	173
9.1.6 Binary Mixtures and Adsorption	174
9.1.7 External Convection: Double Layers	178
9.2 External Body Forces	180
9.2.1 Uniform Rotation	180
9.2.2 Vibrations	182
9.2.3 Magnetic Fields	185
A. Appendix	191
A.1 Some Material Parameters	191
A.2 Stokes Flow Near the Contact Line	192
A.3 Biorthogonal Functions for Oseen-Type Flows	194
A.4 Chebyshev-Galerkin Method for Plane Layers	201
References	203
Index	221
