# Physical Properties of Liquid Crystals

**WILEY-VCH**

Weinheim · New York · Chichester  
Brisbane · Singapore · Toronto

# Contents

## **Chapter I: Introduction and Historical Development . . . . . 1**

*George W. Gray*

1	Introduction . . . . .	1
2	The Early Years up to About 1925 . . . . .	2
3	The Second Phase from 1925 to 1959 . . . . .	5
4	The Third Phase from 1960 to the Present Time . . . . .	8
4.1	Lyotropic Liquid Crystals. . . . .	11
4.2	Theory. . . . .	12
4.3	Polymer Dispersed Liquid Crystals (PDLCs) and Anchoring . . . . .	12
4.4	Materials and New Phases . . . . .	13
5	Conclusions . . . . .	14
6	References . . . . .	14

## **Chapter II: Guide to the Nomenclature and Classification of Liquid Crystals . . . 17**

*John W. Goodby and George W. Gray*

1	Introduction . . . . .	17
2	General Definitions . . . . .	18
3	Structural Features . . . . .	19
4	Polymeric Liquid Crystals . . . . .	20
5	Notation of Thermotropic Liquid Crystalline Properties . . . . .	20
5.1	Description of the Solid State. . . . .	20
5.1.1	Description of Soft Crystals . . . . .	20
5.2	Description of the Liquid Crystalline Phases . . . . .	21
5.2.1	Nematic and Chiral Nematic Phases . . . . .	21
5.2.2	Smectic Liquid Crystals. . . . .	21
5.2.3	Chiral Smectic Liquid Crystals . . . . .	21
5.2.4	Columnar Phases . . . . .	22
5.2.5	Plastic Crystals . . . . .	23

5.2.6	Condis Crystals . . . . .	23
5.2.7	Cubic . . . . .	23
5.2.8	Re-entrants . . . . .	23
5.3	Description of the Clearing Parameters. . . . .	23
6	Stereochemistry . . . . .	23
7	References . . . . .	23

**Chapter III: Theory of the Liquid Crystalline State . . . . . 25**

1	Continuum Theory for Liquid Crystals . . . . .	25
	<i>Frank M. Leslie</i>	
1.1	Introduction . . . . .	25
1.2	Equilibrium Theory for Nematics. . . . .	26
1.2.1	The Frank–Oseen Energy . . . . .	26
1.2.2	A Virtual Work Formulation . . . . .	27
1.2.3	Body Forces and Moments . . . . .	28
1.2.4	The Equilibrium Equations . . . . .	29
1.2.5	Boundary Conditions . . . . .	30
1.2.6	Proposed Extensions . . . . .	31
1.3	Equilibrium Theory for Smectic Liquid Crystals . . . . .	32
1.3.1	An Energy Function for SmC Liquid Crystals . . . . .	32
1.3.2	Equilibrium Equations . . . . .	33
1.4	Dynamic Theory for Nematics . . . . .	35
1.4.1	Balance Laws . . . . .	35
1.4.2	A Rate of Work Hypothesis. . . . .	36
1.4.3	The Viscous Stress . . . . .	36
1.4.4	Equations of Motion . . . . .	37
1.5	References . . . . .	38
2	Molecular Theories of Liquid Crystals . . . . .	40
	<i>M. A. Osipov</i>	
2.1	Introduction . . . . .	40
2.2	Microscopic Definition of the Order Parameters for Nematic and Smectic Phases . . . . .	41
2.2.1	Uniaxial Nematic Phase. . . . .	41
2.2.2	Biaxial Nematic Phase . . . . .	42
2.2.3	Smectic A and C Phases . . . . .	43
2.3	Anisotropic Intermolecular Interactions in Liquid Crystals . . . . .	44
2.3.1	Hard-core Repulsion . . . . .	44
2.3.2	Electrostatic and Dispersion Interactions . . . . .	44
2.3.3	Model Potentials . . . . .	46
2.4	Molecular Theory of the Nematic Phase . . . . .	47
2.4.1	Mean-field Approximation and the Maier–Saupe Theory . . . . .	47
2.4.2	Short-range Orientational Correlations . . . . .	51

2.4.3	Excluded Volume Effects and the Onsager Theory . . . . .	52
2.4.4	Packing Effects in Thermotropic Nematics . . . . .	54
2.4.5	The Role of Molecular Biaxiality . . . . .	56
2.4.6	Density Functional Approach to the Statistical Theory of Liquid Crystals . . . . .	58
2.5	Molecular Models for Simple Smectic Phases . . . . .	60
2.5.1	Mean-field Theory of the Nematic–Smectic A Transition . . . . .	60
2.5.2	Phase Diagram of a Hard-rod Fluid . . . . .	63
2.5.3	The Role of Intermolecular Attraction . . . . .	65
2.5.4	Smectic A–Smectic C Transition . . . . .	65
2.6	Conclusions . . . . .	69
2.7	References . . . . .	69
3	Molecular Modelling . . . . .	72
	<i>Mark R. Wilson</i>	
3.1	Techniques of Molecular Modelling . . . . .	72
3.1.1	Molecular Mechanics . . . . .	72
3.1.2	Molecular Dynamics and Monte Carlo Simulation . . . . .	74
3.1.3	Quantum Mechanical Techniques . . . . .	78
3.2	Applications of Molecular Modelling . . . . .	78
3.2.1	Determination of Molecular Structure . . . . .	78
3.2.2	Determination of Molecular Properties . . . . .	80
3.2.3	Determination of Intermolecular Potentials . . . . .	81
3.2.4	Large-Scale Simulation of Liquid Crystals . . . . .	82
3.3	References . . . . .	85
<b>Chapter IV: Physical Properties . . . . .</b>		<b>87</b>
1	Tensor Properties of Anisotropic Materials . . . . .	87
	<i>David Dunmur and Kazuhisa Toriyama</i>	
1.1	Macroscopic and Microscopic Properties . . . . .	92
1.2	References . . . . .	100
2	Magnetic Properties of Liquid Crystals . . . . .	102
	<i>David Dunmur and Kazuhisa Toriyama</i>	
2.1	Magnetic Anisotropy . . . . .	102
2.2	Types of Magnetic Polarization . . . . .	104
2.2.1	Diamagnetism . . . . .	104
2.2.2	Paramagnetism . . . . .	104
2.2.3	Ferromagnetism . . . . .	106
2.3	Diamagnetic Liquid Crystals . . . . .	106
2.4	Paramagnetic Liquid Crystals . . . . .	108
2.5	Ferromagnetic Liquid Crystals . . . . .	110
2.6	Applications of Magnetic Properties . . . . .	110
2.7	References . . . . .	112

3	Optical Properties . . . . .	113
	<i>David Dunmur and Kazuhisa Toriyama</i>	
3.1	Symmetry of Liquid Crystal Phases and the Optical Indicatrix . . . . .	115
3.2	Molecular Theory of Refractive Indices. . . . .	115
3.3	Optical Absorption and Linear Dichroism. . . . .	119
3.4	Refractive Indices and Liquid Crystal Phase Structure . . . . .	121
3.5	Optics of Helicoidal Liquid Crystal Structures . . . . .	124
3.6	References . . . . .	127
4	Dielectric Properties . . . . .	129
	<i>David Dunmur and Kazuhisa Toriyama</i>	
4.1	Dielectric Response of Isotropic Fluids . . . . .	129
4.2	Dielectric Properties of Anisotropic Fluids . . . . .	133
4.2.1	The Electric Permittivity at Low Frequencies: The Static Case. . . . .	133
4.2.1.1	Nematic Phase . . . . .	133
4.2.1.2	The Smectic Phases . . . . .	138
4.2.2	Frequency Dependence of the Electric Permittivity: Dielectric Relaxation. . . . .	143
4.3	References . . . . .	149
5	Elastic Properties . . . . .	151
	<i>David Dunmur and Kazuhisa Toriyama</i>	
5.1	Introduction to Torsional Elasticity . . . . .	151
5.2	Director Distribution Defects and Fluctuations . . . . .	157
5.2.1	Defects in Liquid Crystals. . . . .	158
5.2.2	Fluctuations . . . . .	160
5.3	Curvature Elasticity of Liquid Crystals in Three Dimensions. . . . .	161
5.4	Electric and Magnetic Field-induced Deformations. . . . .	163
5.4.1	Director Distribution in Magnetic Fields . . . . .	164
5.4.2	Director Distribution in Electric Fields . . . . .	167
5.4.3	Fréedericksz Transitions as a Method for Measuring Elastic Constants . . . . .	168
5.4.3.1	Capacitance Method . . . . .	168
5.4.3.2	Birefringence Method . . . . .	169
5.4.4	Fréedericksz Transition for Chiral Nematics . . . . .	170
5.4.5	Fréedericksz Transitions for Smectic Phases . . . . .	171
5.5	Molecular Aspects of Torsional Elasticity. . . . .	172
5.5.1	van der Waals Theory . . . . .	172
5.5.2	Results from Lattice Models. . . . .	175
5.5.3	Mean Field and Hard Particle Theories . . . . .	175
5.5.4	Computer Simulations. . . . .	176
5.6	Experimental Aspects of Elastic Constants and Comparison with Theoretical Predictions. . . . .	177
5.7	References . . . . .	178
6	Phase Transitions . . . . .	179
6.1	Phase Transitions Theories . . . . .	179
	<i>Philippe Barois</i>	
6.1.1	Introduction . . . . .	179

6.1.2	The Isotropic–Nematic Transition . . . . .	179
6.1.2.1	Mean Field Approach (Landau–de Gennes) . . . . .	179
6.1.2.2	Fluctuations . . . . .	182
6.1.2.3	Isotropic–Nematic Transition in Restricted Geometries . . . . .	182
6.1.3	The Nematic–Smectic A Transition . . . . .	183
6.1.3.1	Definition of an Order Parameter . . . . .	183
6.1.3.2	Mean Field Description (McMillan, de Gennes) . . . . .	184
6.1.3.3	Analogy with Superconductors . . . . .	184
6.1.3.4	Critical Exponents and Scaling . . . . .	187
6.1.3.5	Renormalization Group Procedures . . . . .	188
6.1.3.6	Dislocation Loops Theory . . . . .	188
6.1.4	The Smectic A–Smectic C Transition . . . . .	189
6.1.4.1	The Superfluid Helium Analogy . . . . .	189
6.1.4.2	The N–SmA–SmC Point . . . . .	189
6.1.5	The Smectic A–Hexatic Smectic B Transition . . . . .	191
6.1.6	Phase Transitions in Chiral Liquid Crystals . . . . .	192
6.1.6.1	Chirality in Nematic and Smectic Liquid Crystals . . . . .	192
6.1.6.2	Mean Field Chiral N–SmA–SmC model . . . . .	193
6.1.6.3	Twist Grain Boundary Phases . . . . .	194
6.1.7	Frustrated Smectics . . . . .	196
6.1.7.1	Polar Smectics . . . . .	196
6.1.7.2	The Model of Frustrated Smectics (Prost) . . . . .	197
6.1.7.3	The Mean Field Model . . . . .	199
6.1.7.4	Critical Properties of the Isolated SmA–SmA Critical Point . . . . .	202
6.1.7.5	The Re-entrant Phenomenon . . . . .	204
6.1.8	Conclusions . . . . .	205
6.1.9	References . . . . .	206
6.2	Experimental Methods and Typical Results . . . . .	208
6.2.1	Thermal Methods . . . . .	208
	<i>Jan Thoen</i>	
6.2.1.1	Introduction . . . . .	208
6.2.1.2	Theoretical Background . . . . .	208
6.2.1.3	Experimental Methods . . . . .	212
6.2.1.4	Calorimetric Results . . . . .	221
6.2.1.5	Photoacoustic and Photopyroelectric Results . . . . .	229
6.2.1.6	Acknowledgements . . . . .	230
6.2.1.7	References . . . . .	230
6.2.2	Density . . . . .	232
