The Practice of Time Series Analysis

Springer

Contents

Preface to the English Version v

Preface vii

The Structure of This Book and General References ix

1 Control of Boilers for Thermoelectric Power Plants by Means of a Statistical Model 1

Hideo Nakamura

1.1 Introduction 1
1.2 Problems in Controlling Multivariable System 2
1.3 System Analysis and Control by Means of Statistical Model 4
1.4 Practical Procedure for Optimal Controller Design 6
1.5 Application Results at Actual Plants 13
1.6 Closing Remarks 15

2 Feedback Analysis of a Living Body by a Multivariate Autoregressive Model 19

Takao Wada

2.1 Introduction 19
2.2 Body Liquid Control and Feedback 20
2.3 Example of the Relative Power Contribution and Impulse Response . . 23
2.4 Using an Autoregressive Model for Feedback Analysis 25
2.5 Obtaining the Power Contribution 26
2.6 State Equation and Impulse Response 27
2.7 Impulse Response of the Closed and Open Systems 29
2.8 Confirmation by a Virtual Feedback System 31
2.9 Conclusions 34

3 Factor Decomposition of Economic Time Series Fluctuations – Economic and Statistical Models in Harmony **37**

Kosei Fukuda

3.1 Introduction · · · · · 37
3.2 Model 1 (Model with Stochastic Components Only) · · · · · 38
3.3 Model 2 (the Model Including Deterministic Components) · · · · · 42
3.4 Model 3 (the Model by Which Macroeconomic Policy Effect can Also be Measured) · · · · · 46
3.5 Has Fine Tuning been Successful? · · · · · 50
3.6 Is Prediction Ability Available? · · · · · 52
3.7 Conclusions and Subjects in the Future · · · · · 53

4 The Statistical Optimum Control of Ship Motion and a Marine Main Engine **57**

Kohei Ohtsu

4.1 Introduction · · · · · 57
4.2 Outline of the Control of the Motion of the Hull and Main Engine · · 58
4.3 Statistical Model of Ship Motions and Its Control · · · · · 60
4.4 Design of Optimum Autopilot System Based on the Control-Type Autoregressive Model · · · · · 62
4.5 Noise-Adaptive Control System · · · · · 68
4.6 Rudder-Roll Control System · · · · · 71
4.7 Application to the Marine Main Engine Governor System · · · · · 72
4.8 Conclusions · · · · · 75

5 High Precision Estimation of Seismic Wave Arrival Times **79**

Tetsuo Takanami

5.1 Introduction · · · · · 79
5.2 Locally Stationary AR Model · · · · · 80
5.3 Automatic Division of a Locally Stationary Interval · · · · · 83
5.4 Precision Estimation of Seismic Wave Arrival Times · · · · · 85
5.5 Application: Earthquake Location and Velocity Structure Determination from Precise Arrival Time Estimates · · · · · 86
5.6 Conclusions · · · · · 92

6 Analysis of Dynamic Characteristics of a Driver-Vehicle System **95**

Hitoshi Soma

6.1 Introduction · · · · · 95
6.2 Dynamics of Automobile under Lateral-Wind Disturbance · · · · · 96
6.3 Application of Multivariate AR Model to Driver-Vehicle System · · · · 102
6.4 Dynamics of Driver-Vehicle System under Lateral-Wind · · · · · 106
6.5 Conclusions · · · · · 112

7 Estimation of Directional Wave Spectra Using Ship Motion Data 115

Toshio Iseki

7.1 Introduction . . . 115
7.2 Cross-spectrum Analysis by a Multivariate AR Model . . . 116
7.3 Relation Between the Directional Wave Spectrum and the Ship Motions . . . 120
7.4 Estimation of the Directional Wave Spectrum Using a Bayesian Model . . . 122
7.5 Results of the Tank Test Using a Model Ship . . . 124
7.6 Conclusions . . . 128

8 Control of Filature Production Process 131

Akinori Shimazaki

8.1 Dropping-end Control and Gap Process . . . 131
8.2 Size Control of Raw Silk . . . 137
8.3 Dwell Time in a Black Box . . . 144

9 Application to Pharmacokinetic Analysis 153

Akifumi Yafune

9.1 Introduction . . . 153
9.2 Pharmacokinetic Model . . . 154
9.3 Monte Carlo Estimation of Maximum Log Likelihood . . . 155
9.4 Example . . . 157
9.5 Concluding Remarks . . . 160

10 State Space Modeling of Switching Time Series 163

Fumiyasu Komaki

10.1 Introduction . . . 163
10.2 Time Series Data with Pulses and the Existing Methods . . . 164
10.3 The State Space Model for Time Series with Pulses . . . 166
10.4 Conclusions . . . 172

11 Time Varying Coefficient AR and VAR Models 175

Xing-Qi Jiang

11.1 Introduction . . . 175
11.2 Time Varying Coefficient AR Models . . . 176
11.3 Time Varying Coefficient VAR Models . . . 180
11.4 An Example of Seismic Data Analysis . . . 183

12 Statistical Control of Cement Process **193**

Yoshitaka Yagihara

12.1 Introduction . . . 193
12.2 Cement Plant . . . 194
12.3 Identification and Control of the Kiln Process . . . 196
12.4 Collection and Identification of the Data under the On-line Control . . . 204
12.5 Optimal Production Level and Pursuit Control . . . 204
12.6 Conclusions . . . 206

13 Analysis of a Human/2-Wheeled-Vehicle System by ARdock **209**

Makio Ishiguro and Takao Oya

13.1 Introduction . . . 209
13.2 Data . . . 211
13.3 AR Model and ARdock . . . 214
13.4 Numerical Results . . . 215
13.5 Analysis of the Hands-Free Steering . . . 222
13.6 The Optimum Control . . . 225

14 Vibration Data Analysis of Automobiles **229**

Shinzi Yamakawa

14.1 Preface . . . 229
14.2 Road Surface Input-Wear of Component Material and Riding Comfort . . . 230
14.3 Separation of Correlated Power Components in a Multiple Input System by Means of Power Contributions . . . 232
14.4 Decision of Continuity of Data Properties . . . 235
14.5 Identification of Nonlinear Vibration System Through Bispectral Analysis . . . 236
14.6 Continuous Measurement of Time-variant Spectrum . . . 240
14.7 Afterword . . . 243

15 Auto-Regressive Spectral Analysis of RR-Interval Time Series in Healthy Fetus and Newborn Infants **247**

Teruyuki Ogawa

15.1 Introduction . . . 247
15.2 Subjects and Methods . . . 247
15.3 Results . . . 253
15.4 Discussion . . . 256
15.5 Conclusions . . . 258

16 Information Processing Mechanisms in the Mammalian Brain: Analysis of Spatio-Temporal Neural Response in the Auditory Cortex **263**

Kohyu Fukunishi

16.1 Introduction · · ·

20 Analysis of Earth Tides Data **327**

Yoshiaki Tamura

20.1 What are Earth Tides? . . . 327
20.2 Analysis Model . . . 329
20.3 Tidal Analysis Program BAYTAP-G . . . 334
20.4 Focal Points in the Analysis . . . 337
20.5 Concluding Remarks . . . 338

21 Detection of Groundwater Level Changes Related to Earthquakes **341**

Norio Matsumoto

21.1 Introduction . . . 341
21.2 Observation Data . . . 342
21.3 Data Analysis Method . . . 342
21.4 Analysis of Actual Data . . . 346
21.5 Conclusions . . . 350

22 Processing of Missing Observations and Outliers in Time Series **353**

Genshiro Kitagawa

22.1 Missing Observations and Outliers . . . 353
22.2 Processing of Missing Observations . . . 355
22.3 Processing of Outliers . . . 360
22.4 Conclusions . . . 364

23 Mental Preparation for Time Series Analysis **367**

Hirotugu Akaike

23.1 Introduction . . . 367
23.2 Time Series Analysis and Statistical Science . . . 367
23.3 Prediction and Expectation . . . 368
23.4 Ultimate Truth and Models . . . 368
23.5 Evaluation of a Model and Information Criterion . . . 369
23.6 Confirmation of Validity . . . 370
23.7 Conclusions . . . 371

Appendix **373**

Index **381**
