# CONTENTS

	Preface	xxi
	Acknowledgments	xxiii
	Trademarks	xxv
	Introduction	1
	TCP/IP Applications	2
	TCP/IP Utilities	3
	Terminology	3
	Implementation in a Multivendor Environment	6
	Dialogs	7
	Recommended Reading	7
<b>Chapter 1</b>	<b>TCP/IP: What It Is and Where It Came From</b>	<b>9</b>
	Introduction	10
	Background	10
	Acceptance of the Protocols	12
	TCP/IP Characteristics	12
	The Internet	13
	Registration Services	14
	IAB, IETF, and IESG	15
	Requests for Comments	16
	Information Resources	20
<b>Chapter 2</b>	<b>TCP/IP Architecture</b>	<b>21</b>
	Introduction	22
	Layering	22
	Open Systems Interconnection	23
	TCP/IP Topology	27
	IP	29
	IP Version 6	29
	Routing Protocols	30
	TCP	31
	UDP	31
	Application Services	32
	Additional Services	33

	Host Client and Server Roles	35
	Application Programming Interfaces	36
	Protocol Components Overview	37
	Client Programs	38
	Other Components of TCP/IP	38
<b>Chapter 3</b>	<b>Security Concepts</b>	<b>41</b>
	Introduction	42
	Message Digest Authentication	42
	S/Key and One-Time Passwords	44
	Message Digests and Data Integrity	46
	<i>Confidentiality via Symmetric Encryption</i>	47
	Asymmetric Public Key Encryption	48
	Combined Encryption	49
	Authenticating the Data and the Source	50
	Certification	51
	Secure Web Transactions: SSL	53
	Kerberos	55
	Simple Authentication and Security Layer	57
	IP Security	59
	Firewalls	60
	Recommended Reading	60
<b>Chapter 4</b>	<b>Physical and Data Link Technologies</b>	<b>61</b>
	Introduction	62
	Physical, MAC, and Data Link Functions	62
	Network Technologies	63
	Repackaging	64
	Point-to-Point Protocols	65
	HDLC	66
	The Internet Point-to-Point Protocol	69
	Additional PPP Capabilities	71
	Serial Line Interface Protocol	73
	Local Area Networks	74
	DIX Ethernet	75
	802 Networks	78
	802.2 LLC Header	79
	Layering for 802 Networks	80
	Other LAN Technologies	81
	Use of Hubs	83

	Switching	84
	Packet Networks	85
	X.25 Networks	85
	Frame Relay	90
	SMDS	92
	Asynchronous Transfer Mode	93
	Maximum Transmission Unit	94
	MTUs for IPv6	95
	Tunneling	96
	Sharing a Network Interface	96
	Link Layer Issues	98
	Trailers	98
	Recommended Reading	99
<b>Chapter 5</b>	<b>Naming and Addressing</b>	<b>101</b>
	Introduction	102
	Examples of Internet Names	102
	Hierarchical Structure of Names	103
	Formal Structure of Names	103
	Worldwide Naming Tree	104
	Administration of Names	106
	Configuring a System's Name	107
	Addresses	107
	Address Formats	109
	Address Classes	110
	Addresses Not Connected to the Internet	111
	Addressing Examples	112
	Translating Names to Addresses	113
	Inefficiency Caused by Address Classes	115
	TCP/IP Networks and Subnets	115
	Subnet Masks	116
	Special Reserved Addresses	119
	Classless Addresses	124
	The Need for IP, Next Generation	128
	IP Addresses, Interfaces, and Multihoming	129
	Configuring Addresses and Subnet Masks	130
	Relationship Between Names and Addresses	132
	Address Resolution Protocol	132
	Multiple Addresses for One Router Interface	137
	Multiple Addresses for One Host Interface	138

	Proxy ARP	138
	Recommended Reading	138
<b>Chapter 6</b>	<b>Internet Protocol</b>	<b>141</b>
	Introduction	142
	IP Datagrams	142
	Primary IP Function	143
	How the Subnet Mask Is Used	144
	Host IP Routing Table	145
	Next-Hop Routing	146
	Another Host Routing Table Example	146
	Rule for Routing Table Lookups	148
	Router Routing Tables	149
	Branch Office Routing Table	149
	Global Routing Operations	151
	IP Features	152
	IP Header	154
	Fragmentation	161
	Options	166
	Datagram Processing Scenarios	176
	Firewalling and Security	179
	IP Performance Issues	181
	Recommended Reading	183
<b>Chapter 7</b>	<b>Internet Control Message Protocol</b>	<b>185</b>
	Introduction	186
	ICMP Error Messages	187
	When <i>Not</i> To Send ICMP Messages	190
	ICMP Message Format	190
	Path MTU Discovery	198
	Viewing ICMP Activities	206
	Router Discovery	206
	ICMP Type Numbers	209
	Recommended Reading	210
<b>Chapter 8</b>	<b>IP Routing</b>	<b>211</b>
	Introduction	212
	IP Routing	213
	Manual Routing	213

	Routing Metrics	215
	Routing Tables	216
	A RIP Routing Table	216
	An IGRP/BGP Routing Table	220
	Protocols That Maintain Routing Tables	223
	Routing Information Protocol	224
	RIP Version 2	235
	RIP for IP Next Generation	239
	Moving to More Sophisticated Protocols	240
	IGRP and EIGRP	240
	Open Shortest Path First	247
	OSPF Protocol	256
	OSI Routing	260
	Exterior Protocols	261
	Autonomous Systems	261
	EGP	263
	BGP	265
	GateDaemon Consortium	271
	Recommended Reading	272
<b>Chapter 9</b>	<b>User Datagram Protocol and Transmission Control Protocol</b>	<b>273</b>
	Introduction	274
	Purpose of UDP	274
	Application Port Numbers	275
	Socket Addresses	278
	UDP Protocol Mechanisms	279
	UDP Overflows	282
	TCP Introduction	282
	TCP Concepts	284
	TCP Reliability Mechanisms	291
	Establishing a Connection	293
	Data Transfer	296
	Fast Recovery with Duplicate ACKs	297
	Closing a Connection	299
	Session Trace	301
	Transmission Control Block and Sockets	302
	Flow Control	303
	TCP Header	306
	Detecting a Lost Connection	312

Window Probes	313
Keep-Alives	313
Performance Issues	314
Performance Algorithms	316
TCP Functions	328
TCP States	328
Some Implementation Issues	332
TCP Extensions for High Performance	333
Long Fat Pipes and Elephants	334
Wrapped TCP Sequence Numbers	339
Round-Trip Time Measurement	343
Transactional TCP	346
UDP and TCP Response Times	347
T/TCP and the Three-Way Handshake	348
Value of the Three-Way Handshake	349
T/TCP Connection Counter	351
Reverting to Three-Way Handshakes	353
New Connection Counts	355
Comparing CC Numbers	356
Truncating TIME-WAIT	357
Encoding the T/TCP Options	359
Bringing in New Options	360
Recommended Reading	360
<b>Chapter 10</b>	
Multicasts, Multicast Routing, and RSVP	361
What Good Is Multicasting?	362
Multicast Issues	362
Multicasting on a LAN	363
IP Multicasting	364
Multicast IP Addresses	365
Multicast Groups	366
Sending Multicast Traffic	367
Mapping Multicast IP Addresses to LAN Addresses	367
IGMP Software	369
IGMP Functions	369
IGMP Destination Addresses	370
IGMP Overview	370
Scope of the IGMP Protocol	372
IGMP Protocol Details	372
Multicast Routing	374
Multicast Routing Protocol Selections	376

Distance Vector Multicast Routing Protocol	378
Multicast Extensions to OSPF	393
Protocol Independent Multicast	398
Protocol Independent Multicast-Dense Mode	398
Protocol Independent Multicast-Sparse Mode	401
MBONE	406
Finding Out About Multicasts	408
IPv6 Multicast Listener Discovery Protocol	409
RSVP	409
Resource Reservation Protocol	409
What RSVP Can Do	410
RSVP Sessions	410
Moving to RSVP	411
Using RSVP	411
QoS Classes	413
Finding Out What Resources Are Needed	413
Path Messages	413
Timing Out Paths	416
Making a Reservation	416
Resv Message	417
Getting Permission from Policy Control	418
Terminating a Reservation	419
Reservation Styles	420
Merging	423
Quality of Service Classes	425
RSVP Message Types	428
Some Technical Issues	428
Recommended Reading	430
<b>Chapter 11</b> Configuration with BOOTP and DHCP	431
Introduction	432
Configuration Protocol Requirements	432
BOOTP Capabilities	433
The Need for DHCP	433
Initial Version of BOOTP	434
Evolution of BOOTP	435
Using BOOTP	435
DHCP Features	442
DHCP Selection at a Client	443
DHCP Mechanisms	444
DHCP Message Format	446

	Message Type Option	446
	Typical Initial Client/Server Message Scenario	447
	DHCPREQUEST	452
	Renewing	454
	BOOT Parameters	455
	Other Automatic Configuration Methods	456
	Recommended Reading	456
<b>Chapter 12</b>	<b>Domain Name System</b>	<b>459</b>
	Introduction	460
	Structure of DNS	460
	BIND Software	461
	Resolvers	461
	Looking Up Host Addresses	462
	Authoritative and Cached Responses	465
	Address-to-Name Translations	465
	Local and Global Domain Name Servers	467
	Delegating	471
	Connecting Name Servers to the Internet	472
	DNS Data and Zones	473
	DNS Resource Record Entries	474
	Resource Record Types	475
	A Sample Name-to-Address File	475
	Address-to-Name Translations	480
	Designing a Name Server Database	481
	The Format of DNS Messages	484
	Transports	490
	Additional Record Types	492
	DNS Problems	492
	Secure DNS	493
	Authentication and Digital Signatures	495
	Creating and Checking Digital Signatures	496
	The Secure DNS Framework	497
	Securing Zone Records	499
	Checking a Response	502
	Authenticating What Is Not There	502
	Other Keys and Signatures	504
	Contents of KEY Records	505
	Contents of SIG Records	507
	Transaction Signatures and Zone Transfers	511
	Request Signatures	511

	Recommended Reading	511
<b>Chapter 13</b>	<b>Telnet</b>	<b>513</b>
	Introduction	514
	Using Telnet for Logins	514
	Telnetting to a Selected Port	516
	Telnet Terminal Emulation Model	516
	Common Terminal Types	518
	Options	520
	Controlling a Text-Based Telnet Client	523
	NVT Features	526
	Telnet Commands	527
	Telnet Benefits	532
	Security Issues	532
	Performance Issues	533
	Other Telnet Deficiencies	534
	X Windows	535
	Recommended Reading	535
<b>Chapter 14</b>	<b>File Transfer Protocol</b>	<b>537</b>
	Introduction	538
	Public and Private FTP	539
	FTP Model	542
	FTP Commands	543
	File Transfer Trace	548
	Using PASV	549
	Aborting a Data Transfer	550
	Data Type, File Structure, and Transfer Mode	550
	FTP Protocol	554
	Security Issues	559
	Performance Issues	560
	Trivial File Transfer Protocol	561
	Recommended Reading	564
<b>Chapter 15</b>	<b>RPC and NFS</b>	<b>567</b>
	Introduction	568
	Purpose of the Network File System	568
	Relationship Between NFS, RPC, and XDR	569
	RPC and NFS as Internet Standards	570
	DCE and Microsoft	570

RPC and NFS Implementations	570
Remote Procedure Call Model	571
RPC Programs and Procedures	572
Typical RPC Programs	573
Dealing with Duplicate RPC Requests	574
RPC Portmapper	575
Rpcbind	578
RPC Messages	579
RPC Authentication	581
Sample Version 2 RPC Messages	583
XDR	585
RPC and XDR Programming Interface	588
NFS Model	588
NFS File Pathnames	590
Mount Protocol	591
Mount Procedures	592
Statelessness and Idempotents	593
NFS Protocol	594
Special NFS Utilities	596
File Locking	597
NFS Implementation Issues	597
WebNFS Alternative	598
WebNFS URL	599
Monitoring NFS	599
Recommended Reading	600
<b>Chapter 16</b> Electronic Mail and MIME	601
Introduction	602
Internet Mail Protocols	604
Model for Mail Transmission	605
Sendmail MTA	606
Relaying Mail	606
Mail Recipient Identifiers and Mail Exchangers	608
Simple Mail Transfer Protocol	611
Mail Dialog	612
Timestamps and Message ID	613
Bounced Mail	615
SMTP Commands	615
Reply Codes	617
More About the Internet Message Format	617

	Mail Extensions and MIME	618
	Format of MIME Messages	621
	MIME Content Types	623
	MIME Encoding Methods	623
	Post Office Protocol	626
	Other Mail Applications	628
	Performance	629
	Security	630
	Messaging via X.400	631
	X.500 Directory	634
	Recommended Reading	635
<b>Chapter 17</b>	<b>Network News</b>	<b>637</b>
	Introduction	638
	Internet News Services	638
	Hierarchy of Internet News Groups	638
	News Agents	639
	News Model	639
	NNTP Scenario	640
	Using Desktop News Agents	643
	NNTP Protocol	644
	Differences Between News and Mailing Lists	647
	Recommended Reading	648
<b>Chapter 18</b>	<b>The World Wide Web</b>	<b>649</b>
	Introduction	650
	Background	650
	Where WWW Is Going	653
	Uniform Resource Locators	653
	General URL Format	656
	An Introduction to HTML	657
	Writing Hypertext Markup Language	658
	HTTP Architecture	668
	HTTP Methods	671
	Dynamic Pages and Chunked Encoding	673
	HTTP Headers	674
	Server Response	677
	Message Headers	678
	Status Codes	681
	Recommended Reading	682

<b>Chapter 19</b>	Directories and the Lightweight Directory Access Protocol	683
	Introduction	684
	Telephone Directories	684
	Organizational Directories	685
	A Word of Warning	686
	LDAP Background	686
	LDAP for General Directories	688
	Introduction to X.500 Directories	689
	Directory Entries	689
	Attributes and Their Values	693
	Distinguished Names	695
	Aliases	695
	LDAP Operations	696
	LDAP Sessions	702
	Searching Using URLs	703
	LDAP URL Syntax	705
	LDAP Message Format	707
	Object Classes	709
	Standard Object Classes	710
	Creating/Choosing Directory Object Classes	711
	Attributes for Standard Object Classes	711
	Schema	715
	Directory Structure	715
	Object Class Hierarchy	716
	Structural and Auxiliary Object Classes	717
	Administrative Attributes	718
	Authentication	719
	Access Control Overview	721
	Access Control Example	722
	Access Control Permissions	723
	Summary	724
	Recommended Reading	725
<b>Chapter 20</b>	Simple Network Management Protocol	727
	Introduction	728
	SNMP Model	729
	Roles of Managers and Agents	731
	Nature of Management Information	732
	Structure of Management Information	733
	SMI Tree	733

Object Identifier Names	735
Important MIB Modules	737
How Vendor MIBs Fit In	740
SNMP Message Protocols	740
SNMP Version 1 Message Types	741
Transports	742
SNMP Message Formats	742
Version 1 Problems and Version 2 Corrections	747
Reading MIB Documents	749
MIB Datatypes	752
Textual Conventions	755
SNMP Version 3	756
Version 3 Model	757
Opening Up SNMP	760
Security	760
Security Goals	761
User-Based Security Model	761
Access Control	763
Security Message Formats	764
Checking the Timeliness of V3 Messages	766
Recommended Reading	767
<b>Chapter 21</b> The Socket Programming Interface	769
Introduction	770
Socket Services	771
Blocking and Nonblocking Calls	772
Socket Call	772
TCP Socket Programming	773
A TCP Server Program	776
A TCP Client Program	782
A Simpler Server	784
UDP Socket Programming Interface	787
A UDP Server Program	787
A UDP Client Program	789
Recommended Reading	791
<b>Chapter 22</b> IP Version 6	793
Introduction	794
Overview of IPv6	795
Terminology	795
IPv6 Addresses	796

	Special Addresses	806
	IPv6 Header Format	807
	IPv6 Extension Headers	809
	Autoconfiguration	814
	Configuration via DHCPv6	814
	Neighbor Discovery	814
	IPv6 Transition	815
	Summary	818
	Recommended Reading	818
<b>Chapter 23</b>	<b>ICMPv6 and Neighbor Discovery</b>	<b>819</b>
	Introduction	820
	Basic ICMP Messages	820
	Group Membership Messages	823
	Neighbor Discovery	824
	Recommended Reading	829
<b>Chapter 24</b>	<b>IP Security</b>	<b>831</b>
	Introduction	832
	Security Issues	832
	Security Strategy	832
	Scenarios for Security	833
	Security Protocol Elements	840
	Recommended Reading	846
<b>Appendix A</b>	<b>RFCs and Other TCP/IP Documents</b>	<b>847</b>
<b>Appendix B</b>	<b>Network Information Centers and Other Services</b>	<b>849</b>
<b>Appendix C</b>	<b>Variable-Length Subnet Masks</b>	<b>853</b>
<b>Appendix D</b>	<b>Glossary</b>	<b>859</b>
<b>Appendix E</b>	<b>Abbreviations and Acronyms</b>	<b>879</b>
<b>Appendix F</b>	<b>Binary/Decimal Tables</b>	<b>889</b>
	Bibliography	893
	Index	897
