CONTENTS

Authors and Editors vii

Foreword ix

Introduction 1

1. Many-valued logic and fuzzy set theory 5
S. Gottwald

2. Powerset operator foundations for poslat fuzzy set theories and topologies 91
S.E. Rodabaugh

Introductory notes to Chapter 3 117
U. Höhle

3. Axiomatic foundations of fixed-basis fuzzy topology 123
U. Höhle and A.P. Šostak

4. Categorical foundations of variable-basis fuzzy topology 273
S.E. Rodabaugh

5. Characterization of L-topologies by L-valued neighborhoods 389
U. Höhle

6. Separation axioms: Extension of mappings and embedding of spaces . . 433
T. Kubiak

7. Separation axioms: Representation theorems, compactness, and compactifications 481
S.E. Rodabaugh

8. Uniform spaces 553
W. Kotzé

9. Extensions of uniform space notions 581
M.H. Burton and J. Gutiérrez García

10. Fuzzy real lines and dual real lines as poslat topological, uniform, and metric ordered semirings with unity 607
S.E. Rodabaugh

11. Fundamentals of generalized measure theory 633
E.P. Klement and S. Weber

12. On conditioning operators 653
U. Höhle and S. Weber

13. Applications of decomposable measures 675
E. Pap

14. Fuzzy random variables revisited 701
D.A. Ralescu

Index. 711
