Overview	1
<i>W. O. Bray, Č. V. Stanojević</i>	1
I Convergence and Summability	11
1 Tauberian theorems for generalized Abelian summability methods	
<i>Č. V. Stanojević, I. Canak, V. B. Stanojević</i>	13
1.1 Introduction	13
1.2 A General Summability Method	16
1.3 Generalized Abel's Summability Methods	20
2 Series summability of complete biorthogonal sequences	
<i>W. H. Ruckle</i>	27
2.1 Introduction	27
2.2 Preliminaries	28
2.2.1 Biorthogonal Sequences	28
2.2.2 Sequence Spaces	29
2.2.3 The Beta-Phi Topology on a Sequence Space	30
2.2.4 Biorthogonal Sequences and Sequence Spaces	31
2.2.5 Multiplier Algebras, Sums, and Sum Spaces	31
2.2.6 Convergence Properties of Sequence Spaces	32
2.3 Sums and Sum Spaces	32
2.3.1 Sums	32
2.3.2 Sum Spaces	33
2.4 Inclusion Theorems	37
3 Growth of Cesàro means of double Vilenkin-Fourier series of unbounded type	
<i>W.R. Wade</i>	41
3.1 Introduction	41
3.2 Fundamental concepts and notation	42
3.3 The Vilenkin-Fejér kernel	43

3.4	The main results	45
4	A substitute for summability in wavelet expansions	51
	<i>G. G. Walter, X. Shen</i>	
4.1	Introduction	51
4.2	Background	52
4.3	Summability for Wavelets With Compact Support	53
4.4	The Properties Of The Summability Function	56
4.4.1	The rate of decrease of the filter coefficients	56
4.4.2	The calculation of the positive estimation $f_m^r(t)$	59
5	Expansions in series of Legendre functions	65
	<i>E. R. Love, M. N. Hunter</i>	
5.1	Introduction	65
5.2	Preliminaries and known results	66
5.2.1	Christoffel Summation Formula	66
5.2.2	Stieltjes's Inequality	66
5.2.3	Riemann-Lebesgue-type Theorem	67
5.2.4	Singular Integrals	67
5.3	Neumann's Integral and consequences	68
5.4	Hunter's Identities	71
6	Endpoint convergence of Legendre series	79
	<i>M. A. Pinsky</i>	
6.1	Statement of results	79
6.2	Asymptotic estimates	80
6.3	Convergence at the endpoints	83
6.3.1	Convergence at $x = 1$	83
6.3.2	Convergence at $x = -1$	84
7	Inversion of the horocycle transform on real hyperbolic spaces via a wavelet-like transform	87
	<i>W. O. Bray, B. Rubin</i>	
7.1	Introduction	87
7.2	Preliminaries	88
7.2.1	Algebraic and geometric notions	88
7.2.2	The horocycle transform and its dual	90
7.2.3	Approximate identities on \mathbb{H}	93
7.3	Inversion of the Horocycle Transform	95
8	Fourier-Bessel expansions with general boundary conditions	107
	<i>M. A. Pinsky</i>	
8.1	Introduction	107
8.2	Statement of Results	108

8.3 Proofs 109
 8.4 Identifying the limit 113
 8.4.1 An Abelian lemma 114

II Singular Integrals and Multipliers 117

9 Convolution Calderón-Zygmund singular integral operators with rough kernels 119

L. Grafakos, A. Stefanov 119
 9.1 Introduction 119
 9.2 L^2 boundedness 121
 9.3 L^p boundedness, $1 < p < \infty$ 123
 9.4 The L^1 theory 126
 9.5 Another H^1 condition in dimension 2 133
 9.6 Maximal functions and maximal singular integrals 134

10 Haar multipliers, paraproducts, and weighted inequalities 145

N. H. Katz, M. C. Pereyra 145
 10.1 Introduction 145
 10.2 Preliminaries 148
 10.2.1 Dyadic intervals and Haar basis 148
 10.2.2 Weights 149
 10.3 Weight lemma and decaying stopping times 151
 10.4 L^p Lemmas for decaying stopping times 157
 10.4.1 L^p Plancherel Lemma 157
 10.4.2 L^p version of Cotlar's Lemma 160
 10.5 Boundedness of T_ω^t 161
 10.5.1 Boundedness of T_ω 161
 10.5.2 Some corollaries 165
 10.6 Haar multipliers and weighted inequalities 166

11 Multipliers and square functions for H^p spaces over Vilenkin groups 171

J. E. Daly, K. L. Phillips 171
 11.1 Introduction 171
 11.2 Historical Comments 172
 11.3 Multipliers for H^p ($0 < p < 1$) 174
 11.4 Square Function Characterization of H^p 181

12 Spectra of pseudo-differential operators in the Hörmander class 187

J. Alvarez 187
 12.1 Introduction 187
 12.2 Preliminary results. 189

12.3	The L^p -spectrum of translation invariant pseudo-differential operators	191
12.4	The set K_a	192
12.5	Applications	194
13	Scaling properties of infinitely flat curves and surfaces	
	<i>A. Iosevich</i>	201
13.1	Introduction	201
13.2	Scaling	204
	13.2.1 Simplification	206
	13.2.2 Three dimensions	207
13.3	Orlicz norms of dilation operators	208
13.4	Examples	210
14	Some $L^p(L^\infty)$- and $L^2(L^2)$- estimates for oscillatory Fourier transforms	
	<i>B. Walther</i>	213
14.1	Introduction	213
14.2	$L^p(L^\infty)$ -estimates	215
14.3	$L^2(L^2)$ -estimates	221
15	Optimal spaces for the S'-convolution with the Marcel Riesz kernels and the N-dimensional Hilbert kernel	
	<i>J. Alvarez, C. Carton-Lebrun</i>	233
15.1	Introduction	233
15.2	Definitions and notation	234
	15.2.1 Function and distribution spaces	235
	15.2.2 The S' -convolution	236
	15.2.3 Partition of unity on \mathbb{R}^n	236
15.3	Optimal space for the S' -convolution with the vector Riesz kernel	237
15.4	Optimal space for the S' -convolution with $pv\frac{1}{x_1} \otimes \cdots \otimes pv\frac{1}{x_n}$	240
15.5	Necessary condition for the S' -convolvability with a single Riesz kernel	244
III	Integral Operators and Functional Analysis	249
16	Asymptotic expansions and linear wavelet packets on certain hypergroups	
	<i>K. Trimèche</i>	251
16.1	Introduction	251
16.2	The Chébli-Trimèche hypergroups $(\mathbb{R}_+, *_A)$	252
16.3	The dual of the hypergroups $(\mathbb{R}, *_A)$	255

16.4	Asymptotic expansions and integral representations of Mehler and Schläfli type	258
16.4.1	The asymptotic expansions	258
16.4.2	Integral representations of Mehler and Schläfli type	262
16.5	Harmonic analysis and maximal ideal spaces of some algebras	265
16.5.1	Harmonic analysis	265
16.5.2	The maximal ideal spaces of the algebras $L^1(m_A)$ and $M_b(\mathbb{R}_+)$	270
16.6	Continuous linear wavelet transform and its discretization	272
16.6.1	Linear wavelets on $(\mathbb{R}_+, *_{A})$	272
16.6.2	Linear wavelet packet on $(\mathbb{R}_+, *_{A})$	282
16.6.3	Scale discrete L-scaling function on $(\mathbb{R}_+, *_{A})$	287
17	Hardy-type inequalities for a new class of integral operators	
	<i>G. Sinnamon</i>	297
17.1	Introduction	297
17.2	Starshaped regions	298
17.3	From regions to kernels	304
18	Regularly bounded functions and Hardy's inequality	
	<i>T. Ostrogorski</i>	309
18.1	Introduction	309
18.2	Definition and Uniform Boundedness	310
18.3	The global bounds	314
18.4	The representation theorem	315
18.5	The multiplicative class	317
18.6	Abelian Theorems	319
18.7	Hardy's Inequality	321
19	Extremal problems in generalized Sobolev classes	
	<i>S. K. Bagdasarov</i>	327
19.1	Introduction	327
19.1.1	General problem of sharp inequalities for intermediate derivatives	327
19.1.2	Functional classes $W^r H^\omega(\mathbb{I})$	329
19.1.3	The Kolmogorov problem in $W^r H^\omega(\mathbb{I})$	330
19.2	Maximization of integral functionals over $H^\omega[a, b]$	330
19.2.1	Simple kernels $\Psi(\cdot)$ and their rearrangements $\mathfrak{R}(\Psi; \cdot)$	331
19.2.2	The Korneichuk lemma	332
19.2.3	Extremal functions of functionals over $H^\omega[a, b]$	333
19.2.4	Structural properties of extremal functions $x_{\omega, \psi}$	337
19.3	Kolmogorov problem for intermediate derivatives	342
19.3.1	Differentiation formulae for $f^{(m)}(0)$, $0 \leq m < r$	343
19.3.2	Differentiation formula for $f^{(r)}(0)$	343

19.3.3	Sufficient conditions of extremality	344
19.3.4	Extremality conditions in the form of an operator equation	344
19.3.5	Sharp additive inequalities for intermediate derivatives	345
19.3.6	Kolmogorov problem in Hölder classes	347
19.4	Kolmogorov problem in $W^1H^\omega(\mathbb{R}_+)$ and $W^1H^\omega(\mathbb{R})$	347
19.4.1	Preliminary remarks	347
19.4.2	Maximization of the norm $\ f\ _{L_\infty(\mathbb{R}_+)}$	348
19.4.3	Extremal functions in Hölder classes $W^1H^\alpha(\mathbb{R}_+)$. .	350
19.4.4	Maximization of the norm $\ f'\ _{L_\infty(\mathbb{R}_+)}$	350
19.4.5	Maximization of the norm $\ f\ _{L_\infty(\mathbb{R})}$	352
19.4.6	Maximization of the norm $\ f'\ _{\infty(\mathbb{R})}$	353
20	On angularly perturbed Laplace equations in the unit ball and their distributional boundary values	
	<i>P. R. Massopust</i>	359
20.1	Introduction	359
20.2	Notation and Preliminaries	360
20.3	Bounded Solutions on \mathbb{B}^{n+2}	362
20.4	Distributional Boundary Values	372
20.5	Generalities	376
21	Nonresonant semilinear equations and applications to boundary value problems	
	<i>P. S. Milojević</i>	379
21.1	Introduction	379
21.2	Semi-abstract nonresonance problems	380
21.3	Strong solvability of elliptic BVP's	390
21.4	Time periodic solutions of BVP's for nonlinear parabolic and hyperbolic equations	394
21.4.1	Nonlinear parabolic equations.	394
21.4.2	Applications to the heat equation.	396
21.4.3	Nonlinear hyperbolic equations.	398
21.4.4	Applications to the telegraph equation.	400
21.4.5	Application to the beam equation with damping.	401
22	A topological and functional analytic approach to statistical convergence	
	<i>J. Connor</i>	403
22.1	Introduction:	403
22.2	The support set of a measure	406
22.3	Invariants of statistical convergence	407
22.4	Summability theorems	408

IV Asymptotics and Applications 415

23 Optimal control of divergent control systems 417

D. A. Carlson 417

23.1 Introduction and History 417

23.2 Basic models and hypotheses 420

23.3 Existence of optimal solutions 423

23.3.1 Existence of overtaking optimal solutions without dis-
counting 423

23.3.2 Existence of overtaking optimal solutions with dis-
counting 427

23.4 The associated uncoupled optimal control problems 429

23.4.1 The undiscounted case 429

23.4.2 The discounted case 430

23.5 Optimal solutions of the explicitly state constrained optimal
control problem 431

23.5.1 The undiscounted case 435

23.6 Conclusions 437

24 Surfaces minimizing integrals of divergent integrands 441

H. R. Parks 441

24.1 Introduction 441

24.2 Surfaces and Integrands 443

24.3 Overtaking Minimizers 446

24.4 A Radially Symmetric Example 450

24.5 Hypotheses for Regularity 452

24.6 Barriers 453

24.7 A Result in Differential Geometry 455

24.8 Bounding the Curvature 458

25 Sparse exponential sums with low sidelobes 463

G. Benke 463

25.1 Introduction 463

25.2 Generalized Rudin-Shapiro Polynomials 465

25.3 Exponential Sums with Low Sidelobes 469

26 Spline type summability for multivariate sampling 475

W. R. Madych 475

26.1 Introduction 475

26.1.1 Sampling theory 475

26.1.2 Splines and sampling theory 478

26.1.3 Contents, notation, and acknowledgements 480

26.2 Regular sampling of multivariate functions and their recov-
ery via splines 481

26.2.1 Band limited functions and polyharmonic splines 481

26.2.2	The spaces $L^{2,k}(\mathbb{R}^n)$ and $l^{2,k}(\mathbb{Z}^n)$ and the variational properties of polyharmonic splines	485
26.2.3	The Paley-Wiener space PW_{π}^k	488
26.2.4	Convergence of m -harmonic splines as $m \rightarrow \infty$	492
26.3	Generalizations, related methods, and computational issues	495
26.3.1	Generalizations	495
26.3.2	Multivariate analogues of the Paley-Wiener Theorem and the sampling theorem	499
26.3.3	Box splines	501
26.3.4	Computing polyharmonic splines	503
27	<i>B-Splines and orthonormal sets in Paley-Wiener space</i>	
	<i>A. I. Zayed</i>	513
27.1	Introduction	513
27.2	Preliminaries:	514
27.3	Sampling and Orthonormal Functions	516
27.4	<i>B-splines and Orthonormal Sets in the Paley-Wiener Space</i>	519
28	Norms of powers and a central limit theorem	
	<i>B. Baishanski</i>	523
28.1	Introduction	523
28.2	The Five Parameters	524
28.3	Boundedness	525
	28.3.1 Power Series	525
	28.3.2 Trigonometric Series	527
28.4	Asymptotic Behavior	527
28.5	Asymptotic Series	529
28.6	Changing the Question	532
28.7	Behavior of Scaled $\varphi^{(n)}$ for Large n	533
28.8	Another Kind of Central Limit Theorems	538
29	Quasiasymptotics at zero and nonlinear problems in a framework of Colombeau generalized functions	
	<i>S. Pilipović, M. Stojanović</i>	545
29.1	Introduction	545
29.2	Algebra of generalized functions	547
29.3	\mathcal{G} -quasiasymptotics at zero	550
29.4	Application of \mathcal{G} quasiasymptotics to generalized solutions	552
	29.4.1 System of nonlinear Volterra integral equations with non-Lipschitz nonlinearity	553
	29.4.2 Semilinear hyperbolic system	558
	29.4.3 Nonlinear wave equation	560
	29.4.4 Euler-Lagrange equation	562
	29.4.5 Goursat problem	562
