

# Elementary Electronic Structure

**Walter A. Harrison**

*Department of Applied Physics  
Stanford University*

 **World Scientific**  
*Singapore • New Jersey • London • Hong Kong*

# Contents

<b>1</b>	<b>The Basic Approach</b>	<b>1</b>
1.	Quantum Mechanics	1
A.	Waves and Observables	1
B.	Atomic States	4
2.	Tight-Binding Theory and the Simplest Molecule	11
A.	Molecular Orbitals	11
B.	Extended Hückel Theory	13
C.	Electronic Structure of $\text{Li}_2$	14
D.	The Total Energy	15
3.	The Simplest Many-Atom System, a Metal	16
A.	Energy Bands	18
B.	Matching to Free-Electron Bands	19
C.	Cohesion	20
4.	Hybrid States and Semiconductors	22
A.	Needed Parameters	22
B.	The Nitrogen Molecule	24
C.	$sp$ -Hybrids	27
D.	Semiconductors	32
E.	Overall Organization of Solid-State Systems	33
5.	Ionic Insulators	36
A.	Independent Ions	36
B.	Couplings and Perturbation Theory	37

6. Simple Metals and Pseudopotentials	39
A. Empty-Core Pseudopotentials	39
B. Effective Interaction Between Ions	41
C. Partly-Filled Bands	43
7. Transition-Metal and f-Shell Systems	43
A. Coupling of d-States	44
B. The Coulomb $U_d$	45
C. The Energy Bands and the Friedel Model	45
D. Correlated States in f-Shell Metals	46
E. Transition-Metal and f-Shell-Metal Compounds	47
8. Surfaces and Other Bonding Types	49
A. Surface Energies	49
B. Other Systems	51
<b>2 Bonding in Tetrahedral Semiconductors</b>	<b>53</b>
1. The Crystal Structure and Notation	53
2. Hybrids and Their Coupling	57
A. $sp^3$ -Hybrids	57
B. The Covalent Energy, $V_2$	59
C. The Polar Energy, $V_3$	61
D. The Metallic Energy, $V_1$	63
E. The Overlap Repulsion., $V_0(d)$	65
F. Total Energies and Coulomb Effects	69
3. The Cohesive Energy	70
A. The Bond Orbital Approximation and Matrices	70
B. Metallization	75
C. Homopolar Systems	78
D. Polar Systems	81
E. Coulomb Corrections	82
4. The Dependence of Energy upon Volume	84
A. Trends in Bond Lengths	85
B. The Radial Force Constant	86
C. The Grüneisen Constant	89
5. Structural Stability and Moments	93
A. The Second Moment	94
B. The Dependence Upon Structure	99
C. The Fourth Moment	101
D. Structural Stability	102
E. Angular Rigidity	103
<b>3 Elastic Properties of Semiconductors</b>	<b>107</b>
1. Elastic Constants and Bulk Modulus	108
2. Shear Constants	109
A. Twist Distortion	111
B. Graphitic Distortion and Internal Displacements	113
C. Interatomic Metallization and Effects of Polarity	118
3. Vibrational Frequencies	121
A. Acoustic Modes	124
B. Optical Modes	126
C. Effects of Polarity	128

4. Interatomic-Interaction Models	130
A. Traditional Models	131
B. The Angular Force Puzzle	132
C. A Solution for Carbyne	134
D. Application to Tetrahedral Semiconductors	139
<b>4 The Dielectric Properties of Semiconductors</b>	<b>142</b>
1. Bond Dipoles and Effective Charges	143
2. Electronic Susceptibilities	146
A. The Linear Response	146
B. The Effect of Metallization	149
C. Higher-Order Susceptibilities	152
D. Magnetic Susceptibility	158
3. Internal Displacement Properties	161
A. The Transverse Charge	161
B. Optical Mode Splitting	164
C. The Static Dielectric Constant	165
D. The Piezoelectric Effect	167
E. Elastooptic Effect	170
F. Electrooptic Effect	174
G. Dielectric Response in the Infrared	176
<b>5 Semiconductor Energy Bands</b>	<b>179</b>
1. Wavenumbers and Brillouin Zones.	180
2. Bonding and Antibonding Bands	183
A. Bands from the coupling $V_I$	184
B. Bands for polar crystals	187
C. The effects of $V_I^x$	188
3. Full Tight-Binding Bands	188
A. $sp^3$ -bands	188
B. A Peripheral $s^*$ -State	191
C. Fitting the Free-Electron Bands	192
D. Obtaining Universal Parameters	194
E. Application to Polar Systems	196
F. The Band States	197
G. Spin-Orbit Coupling	199
4. More Accurate Bands	203
5. Corrections to the Bands	206
A. Coulomb Enhancement of the Gaps	207
B. Polarons	210
C. Wannier Functions	213
<b>6 Electronic Properties</b>	<b>214</b>
1. The Valence-Band Maximum.	214
2. Optical Absorption	217
A. Vertical Transitions	217
B. The Optical Matrix Elements	218
C. The Absorption Threshold	221
D. Indirect Gaps	224
E. The Optical Absorption Peaks	225

3. Effective Masses	226
A. Conduction-Band Mass at $\Gamma$	227
B. Light-Hole Mass	231
C. Heavy-Hole Mass	232
D. Masses for Indirect Minima	234
4. Dynamics of Band States	235
A. The Dynamical Equations	235
B. Limitations of the Theory	236
C. The Dynamics of Holes	237
5. The Form of the Hole Bands	238
A. Heavy- and Light-Hole Bands	238
B. Negative Gaps	240
C. Spin-Orbit-Split Bands	241
D. Density of States	245
6. The Optical Absorption Rate	248
A. The Matrix elements	248
B. The Rate	251
<b>7 Effects of Lattice Distortions</b>	<b>254</b>
1. Deformation Potentials for Dilatations	255
A. Nonorthogonality and Electrostatic Contributions	256
B. Predicted Deformation Potentials	257
C. Experimental Values	259
2. Band Shifts Due to Shear Distortions	261
A. The Effects of Nonorthogonality	262
B. Indirect Gap Conduction Bands	263
C. Valence Bands	265
D. Shifts of the Spin-Orbit Split Bands	267
3. The Electron-Phonon Interaction	269
A. Interactions for Simple Systems	271
B. Acoustic Modes and Conduction Electrons	274
C. Electrostatic Contributions in Polar Crystals	278
D. Interaction with Optical Modes	279
E. Holes and Local Lattice Rotations	280
F. Acoustic Modes and Holes	283
a. Light Holes and Longitudinal Modes	283
b. Light Holes and Shear Modes	286
c. Heavy Holes and Light-Heavy Matrix Elements	287
G. Electrostatic Potentials and Screening	287
H. Electron Scattering by Acoustic Modes	290
<b>8 Impurities and Defects</b>	<b>293</b>
1. Semiconductor Alloys	294
A. Enthalpies of Solution	294
B. Lattice Distortions	296
C. Doping and Energies of Substitution	300
D. Alloy Energy Bands and Scattering	304
2. Impurity States	307
3. Vacancies and Interstitials	313
A. The Ideal Vacancy	314
B. Jahn-Teller Distortion	314
C. The Tetrahedral and Shared-Site Interstitials	317
D. The Role in Diffusion	321

<b>9 Bonding In Ionic Crystals</b>	324
1. The Independent-Ion Model	326
A. Coulomb Effects and Closed-Shell Ions	326
B. Crystal Structures and Electrostatic Energy	328
C. The Band Gap	332
D. The Cohesive Energy	336
E. The Born Electrostatic Model	339
F. Coulomb Enhancements of the Gap.	341
2. Coupled Ions	343
A. Covalent Corrections to the Energy	344
B. The Energy Bands	345
C. Special Points	348
D. Volume-Dependent Properties in Second Order	350
<b>10 Elastic Properties of Ionic Crystals</b>	353
1. The Overlap Repulsion	354
A. Based upon Local-Density Theory	354
B. Fitting the Power-Law Form	356
C. Second-Neighbor Repulsions	358
2. Resonant Bonds	358
3. Volume-Dependent Properties	361
A. Equilibrium Spacing	361
B. Cohesive Energy	363
C. Bulk Modulus	363
D. Grüneisen Constant	365
4. Elastic Constants	366
A. The Shear Constant, $(c_{11} - c_{12})/2$	367
B. The Shear Constant, $c_{44}$ , and the Chemical Grip	368
C. Vibrational Frequencies	369
5. Coulomb Contributions	372
A. Volume-Dependent Properties	374
B. Elastic Constants	375
<b>11 Dielectric Properties of Ionic Solids</b>	379
1. The Optical Dielectric Susceptibility	379
A. The Alkali Halides	382
B. Noble-Metal Halides	384
C. Divalent Compounds	384
D. Ten-Electron Compounds	385
E. The Implication of the Errors	387
F. Local-Field Effects	387
G. Application to Other Ionic Solids	389
2. Effective Ionic Charges	389
A. The Static Effective Charge	390
B. The Transverse Charge	392
C. The Static Dielectric Constant	396

<b>12 Covalent Insulators, SiO<sub>2</sub></b>	399
1. The Structure and Bonding Unit	400
2. The Parameters	402
3. Cohesive Energy	406
A. Metallization	408
B. Inter-atomic Metallization	409
4. Radial Force Constant	410
5. The Angle at Oxygen	411
6. Elasticity and the Bonding Unit	414
7. The Vibrational Frequencies	417
8. The Refractive Index	418
9. Effective Transverse Charge	419
10. Energy Bands	421
11. Summary of the SiO <sub>2</sub> Study	424
12. Other Covalent Insulators	425
A. GeO <sub>2</sub>	425
B. Oxyanions, Sulfates, etc.	425
C. Thallium Arsenic Selenide	429
D. Other Mixed Covalent-Ionic Solids	430
E. A Complex Semiconductor, SiP <sub>2</sub>	430
<b>13 Simple Metals, Electronic Structure</b>	434
1. Crystal Structures	435
2. Free-Electron States	439
3. Tight-Binding Theory	440
A. Cohesive Energy	440
B. The Bulk Modulus	443
4. Pseudopotentials	444
A. Empty-Core Pseudopotentials	446
B. Madelung and Total Free-Electron Energy	449
C. Equilibrium Spacing and Bulk Modulus	452
D. Higher-Order Terms	454
5. Structure Factors and Form Factors	455
6. Screening of Pseudopotentials	456
A. Fermi-Thomas Theory	457
B. Screened Form Factors	459
C. The Real-Space Pseudopotential, $w(r)$	461
D. More Accurate Screening	462
7. Diffraction and Fermi Surfaces	463
A. Motion in a Uniform Magnetic Field	463
B. Construction of Fermi Surfaces	468
C. Fermi-Surface Distortions	471
D. Magnetic Breakdown	473
8. Scattering by Defects	474
9. Electron-Phonon Interaction	476
A. The Structure Factor	476
B. Electron Scattering	479

<b>14 Simple Metals, Bonding Properties</b>	483
1. The Band-Structure Energy	483
A. Vibrational Frequencies and the Kohn Effect	486
B. Other Properties	488
2. Interatomic Interactions	489
A. The Effective Interaction	489
B. The Total Energy	491
C. Volume Dependence of the Total Energy	492
3. Properties from Interatomic Interactions	495
A. The Bulk Modulus	496
B. Deviations from the Cauchy Relations	497
C. Poisson's Ratio	498
D. The Grüneisen Constant	499
4. Calculation of Vibration Spectra	500
5. Liquid Metals.	504
A. Liquid Structure Factors	504
B. Resistivity	507
6. Pseudopotentials and Covalent Bonding	508
A. Coupling Through the $[100]2\pi/a$ States	508
B. Polar Systems	512
7. Alloys	513
A. Heats of Solution	514
a. Homovalent solutions.	519
b. Heterovalent solutions.	521
B. Alloy Formation Energies	522
<b>15 Transition Metals</b>	530
1. Transition-Metal Pseudopotentials	532
A. Pseudopotentials and OPW's	532
B. Atomic d-States	534
C. Hybridization with d-States	535
D. Contribution to the Pseudopotential	538
2. Coupling Between d-States	542
A. The dd-Coupling	542
B. The Slater-Koster Tables	544
C. Energy Bands	545
D. Fermi Surfaces and Density of States	550
3. The Atomic Sphere Approximation	554
A. The Atomic Surface Method	556
B. Values for $r_d$	558
C. Further Approximations	559
4. The Friedel Model	559
A. Band Width from the Second Moment	560
B. Coulomb Shifts and Values for $\epsilon_d$	561
C. Hybridization Already Included	563
D. The Total Energy	565
E. The Cohesive Energy	569
F. Volume-Dependent Properties	571
G. Crystal Structure Determination	576
H. Transition-Metal Alloys	578

5. Interatomic Interactions and Elasticity	582
A. The Effective Interaction	582
B. Elastic Constants	584
C. Multibody Forces	584
6. Ferromagnetism	586
A. The Exchange Energy	587
B. The Ferromagnetic State	588
<b>16 f-Shell Metals</b>	<b>593</b>
1. Correlated States	593
A. An Exact Solution	594
B. The Unrestricted Hartree-Fock Approximation	595
C. Self-Interactions	597
D. Generalization to d- and f-Bands	598
a. Local Moments in the UHF Approximation	598
b. Generalizing the Exact Result	599
2. Parameters for f-Shell Systems	601
A. <i>ff</i> -Coupling	602
B. General Formulae	606
C. Coulomb $U_f$	607
D. Spin-Orbit Coupling	608
E. The <i>sd</i> -Electrons	610
3. Electronic Structure of Rare Earths	612
A. The f-Electrons	612
B. The Cohesive Energy	614
C. The Volume-Dependent Energy	616
D. Interatomic Interactions	617
E. Crystal Structure	618
4. Electronic Structure of the Actinides	618
A. The Cohesive Energy	618
B. Volume-Dependent Properties	619
C. Interatomic Interactions	624
D. Crystal Structures	624
5. Criterion for Local Moments	625
A. Phase Shifts	626
B. The Friedel Sum Rule	628
C. Resonant States	629
D. The Criterion	631
6. Strongly Correlated Systems	637
A. The Electronic Structure of Americium	637
B. Antiferromagnetism	638
C. The Kondo Effect	639
D. Heavy Fermion Systems	640
<b>17 Transition-Metal (AB) Compounds</b>	<b>641</b>
1. Parameters for Compounds	642
2. The Monoxides, Nitrides and Carbides	647
A. The Octet Compounds	647
B. Other Oxides and Nitrides	648

3. Quantitative Theory	650
A. The Essential Electronic Structure	650
B. Bands for the Compounds	652
C. Covalent and Polar Energies	656
D. The d-State Energy, $\epsilon_d$	659
E. The pd-Bonding Energy and Cohesion	661
F. The Volume-Dependent Properties	664
4. Correlated States	668
A. Correlation Energy	668
B. The Metal-Insulator Transition	670
5. The Role of d-States in Semiconductors	672
<b>18 Other Transition and f-Shell Compounds</b>	<b>679</b>
1. Compounds of f-Shell Metals	679
A. Rare-Earth Compounds	680
B. Actinide Compounds	682
2. The Dioxides	688
A. $\text{TiO}_2$ , Rutile	688
B. $\text{RuO}_2$	688
3. Trioxides, the Perovskites	692
A. The Perovskite Structure	693
B. The Electronic Structure	695
C. Bonding Properties	699
D. Madelung Energies	701
E. The Electron-Phonon Interaction	703
4. The Cuprates	704
A. The Electronic Structure	705
B. Peierls Instabilities and the Antiferromagnetic State	708
C. Phonons, Paramagnons, and Excitons	711
<b>19 Surfaces and Interfaces</b>	<b>714</b>
1. Surface Energies	714
A. Elemental Semiconductors	715
B. Ionic Crystals and Polar Semiconductors.	716
C. Metal Surfaces.	716
D. Interaction Between Surfaces and Giant Magnetoresistance	723
2. Photothresholds, Work Functions and Electron Affinities	727
A. Corrections to the Tight-Binding Photothreshold	727
B. Photothresholds in Semiconductors.	728
C. Work Functions in Metals	729
3. Reconstruction on Semiconductor Surfaces	731
A. The Silicon (111) $2 \times 1$ and General (110) Surfaces	732
B. The Silicon (100) $2 \times 1$	733
C. Polar Surfaces	734
D. The Silicon (111) $7 \times 7$	737
4. Interfaces	738
A. Matching Wavefunctions at Heterojunctions	739
B. Semiconductor Band Line-Ups	741
C. Other Views	743
D. Strain-Layer Superlattices	745
E. Metal-Semiconductor Interfaces	747
F. Adsorbed Atoms on Semiconductors	749

<b>20 Other Systems</b>	752
1. Non-Tetrahedral Covalent Solids	752
A. Two Nearest Neighbors, S, Se and Te	752
B. Multicenter Bonds	754
C. $Zn_3P_2$	757
D. Boron	759
2. Inert-Gas Solids and Molecular Crystals	761
A. Electronic Structure of Inert-Gas Solids	761
B. Excitons	763
C. Dielectric Polarizability	764
D. Van-der-Waals Interaction	765
E. Lennard-Jones Interaction	767
F. Molecular Solids	769
3. $\pi$ -Bonded Systems	770
A. Graphite	770
a. Energy Bands	770
b. The $\pi$ -Bonding Energy	772
B. Fullerenes	773
C. The Heme Group	775
4. Systems with Hydrogen	779
A. $H_2$	780
B. Central Hydrides	781
C. Hydrocarbons	783
D. Shared-Hydrogen Bonding	783
