## Wave Optics

### Preface

Chapter	54	Introduction	1191
	54.1	Organization of the subject	1191
	54.2	History	1195

### PART XI – WAVE MECHANICS

Chapter	55	The Schrödinger Equation	1211
	55.1	Introduction	1211
	55.2	Formulation of Schrödinger's equation	1211
	55.3	The continuity equation	1213
	55.4	The gauge transformation	1215
Chapter	56	The Relativistic Wave Equation	1217
	56.1	The Dirac equation	1217
	56.2	The scalar wave equation	1218
	56.3	Properties of the relativistic wave equation	1220
	56.4	Rigorous approach	1223
Chapter	57	The Eikonal Approximation	1224
	57.1	The product separation	1224
	57.2	The essential approximation	1225
	57.3	The variational principle	1228
	57.4	The calculation of eikonal functions	1231
	57.5	The calculation of wave amplitudes	1232
Chapter	58	Paraxial Wave Optics	1235
	58.1	The paraxial Schrödinger equation	1235
	58.2	Particular solution of the paraxial Schrödinger equation	1241
	58.3	Paraxial image formation	1244
Chapter	59	The General Theory of Electron Diffraction and Interference	1251
	59.1	Kirchhoff's general diffraction formula	1251
	59.2	Necessary simplifications	1253
	59.3	Fresnel and Fraunhofer diffraction	1255

	59.4	Electron diffraction in the presence of electromagnetic fields	1257
	59.5	Asymptotic diffraction formulae	1263
	59.6	The observability of diffraction and interference fringes	1267
Chapter	60	Elementary Diffraction Patterns	1273
	60.1	The object function	1273
	60.2	Rectangular structures	1276
	60.3	Circular structures	1281
	60.4	Caustic interferences	1287
	60.5	Diffraction disc with lens aberrations	1291
	60.6	The Rayleigh rule and criterion	1295
PART XII – ELECTRON INTERFERENCE AND ELECTRON HOLOGRAPHY			
Chapter	61	General Introduction	1301
Chapter	62	Principles of Interferometry	1311
	62.1	The electrostatic biprism	1311
	62.2	Quasi-homogeneous interference fringes	1318
	62.3	Coherence problems	1324
	62.4	The Aharonov-Bohm effect	1330
	62.5	Other electron interference studies	1332
Chapter	63	Principles of Holography	1336
	63.1	In-line holography	1337
	63.2	Off-axis holography: hologram formation in a two-beam interferometer	1344
	63.3	Reconstruction procedures	1352
	63.4	Further reading	1361
PART XIII – THEORY OF IMAGE FORMATION			
Chapter	64	General Introduction	1365
Chapter	65	Fundamentals of Transfer Theory	1370
	65.1	The integral transformation	1370
	65.2	Isoplanatism and Fourier transforms	1373
	65.3	The wave transfer function	1376
	65.4	Explicit formulae	1380
Chapter	66	The Theory of Bright-field Imaging	1385
	66.1	Image contrast for weak specimens	1385

	66.2	Spectral distributions of the illumination	1397
	66.3	Particular forms of the spectra	1410
	66.4	Optimum defocus and resolution limit	1415
	66.5	Extensions of the theory	1421
Chapter	67	Image Formation in the Scanning Transmission Electron Microscope	1441
	67.1	Introduction	1441
	67.2	Wave propagation in STEM	1441
	67.3	Detector geometry	1446
	67.4	Concluding remarks	1453

## PART XIV – ELECTRON INTERACTIONS IN THIN SPECIMENS

Chapter	68	Electron Interactions in Amorphous Specimens	1457
	68.1	Introduction	1457
	68.2	Definition of the elastic cross-sections	1459
	68.3	The first-order Born approximation for elastic scattering	1461
	68.4	The high-energy approximation	1468
	68.5	Partial wave analysis	1472
	68.6	Inelastic electron scattering	1475
	68.7	Plural and multiple electron scattering	1481
Chapter	69	Electron Interactions in Crystalline Specimens	1488
	69.1	Introduction	1488
	69.2	Fundamentals of crystallography	1490
	69.3	The periodic potential	1494
	69.4	Kinematic theory of electron scattering	1497
	69.5	General formulation of the dynamical theory	1505
	69.6	The two-beam case	1513
	69.7	Applications and extensions of the dynamical theory	1522
	69.8	Image simulation	1527

## PART XV – DIGITAL IMAGE PROCESSING

Chapter	70	Introduction	1531
	70.1	Organization of the subject	1531
	70.2	Image algebra	1534
	70.3	Notation	1542

Chapter	71	Acquisition, Sampling and Coding	1545
	71.1	Acquisition	1545
	71.2	Sampling	1546
	71.3	Quantization	1554
	71.4	Coding	1556
	71.5	Electron optical considerations	1560
Chapter	72	Enhancement	1562
	72.1	Operations on individual pixels	1562
	72.2	Linear filtering	1566
	72.3	Nonlinear filters	1574
	72.4	Image algebraic representation of enhancement	1593
	72.5	Enhancement in electron microscopy	1594
Chapter	73	Linear Restoration	1595
	73.1	Introduction	1595
	73.2	Extended Wiener filters	1596
	73.3	Filtering with constraints	1603
	73.4	Hoenders' procedure	1607
	73.5	Recursive filtering	1609
	73.6	Other approaches	1612
Chapter	74	Nonlinear Restoration	1613
	74.1	Introduction	1613
	74.2	Extended linear approximation	1614
	74.3	Multiple recordings (circular symmetry)	1618
	74.4	Analyticity	1630
	74.5	Maximum entropy and related probabilistic methods	1650
Chapter	75	Three-dimensional Reconstruction	1653
	75.1	Introduction	1653
	75.2	Methods	1660
	75.3	Pre-processing	1670
	75.4	Concluding remarks	1681
Chapter	76	Image Analysis	1683
	76.1	Introduction	1683
	76.2	Discrete geometry	1684
	76.3	Segmentation and feature extraction	1686
	76.4	Classification	1697
	76.5	Description	1699
	76.6	Further reading	1703
Chapter	77	Instrument Control and Instrumental Image Manipulation	1705

77.1	Introduction	1705
77.2	Measurement of microscope operating parameters	1706
77.3	Control	1710
PART XVI – COHERENCE, BRIGHTNESS AND SPECTRAL FUNCTIONS		
Chapter 78	Coherence and the Brightness Functions	1719
78.1	Introduction	1719
78.2	Coherence	1720
78.3	Radiometry	1730
78.4	The brightness of partially coherent sources	1731
78.5	Consequences for the van Cittert-Zernike theorem	1735
78.6	Eigenfunction expansions of the coherence functions	1736
78.7	The quasihomogeneous source	1743
78.8	Brightness, coherence and quasihomogeneity	1748
78.9	Temporal and spatial coherence	1752
78.10	Related work	1757
Chapter 79	Instrumental Aspects of Coherence	1761
79.1	Introduction	1761
79.2	The propagation of coherence functions	1761
79.3	Coherence and illumination	1767
Appendix		1769
Notes and References		1773
