| <b>PREFACE</b>  | <b>ix</b> |
| <b>NOTATION CONVENTIONS</b>                               | <b>xi</b> |
| <b>1 INTRODUCTION</b>                                     | <b>1</b>  |
| 1.1 Metals, Insulators and Semiconductors                 | 1         |
| 1.2 Scope of the Book                                     | 4         |
| <b>2 ELECTRONS, NUCLEI AND HAMILTONIANS</b>               | <b>9</b>  |
| 2.1 The Chemical Model                                    | 9         |
| 2.1.1 The Silicon Atom                                    | 9         |
| 2.1.2 Homopolar Binding in Silicon                        | 14        |
| 2.1.3 Other Semiconductors and Impurities                 | 18        |
| 2.2 The Single Electron Hamiltonian                       | 19        |
| 2.2.1 The Electron Hamiltonian of a Crystal               | 19        |
| 2.2.2 Self-consistent Methods                             | 20        |
| 2.2.3 Core and Valence Electrons                          | 22        |
| 2.3 The Crystal Lattice                                   | 23        |
| 2.3.1 Nuclear Motion                                      | 23        |
| 2.3.2 Phonon Modes  | 27        |
| 2.3.3 Electron-Phonon Coupling                            | 30        |
| <b>3 BAND STRUCTURE</b>                                   | <b>35</b> |
| 3.1 Translational Symmetry                                | 35        |
| 3.1.1 Primitive Cells and Space Lattices                  | 35        |
| 3.1.2 Reciprocal Space and Brillouin Zones                | 38        |
| 3.1.3 Transforming from Normal to Reciprocal Space        | 40        |
| 3.1.4 Functions obeying Translational Symmetry            | 44        |
| 3.1.5 Discrete Functions in Finite Crystals               | 47        |
| 3.2 Bloch Functions and Band Structure                    | 50        |
| 3.2.1 The Single Electron Hamiltonian in Reciprocal Space | 50        |
| 3.2.2 Free Electrons                                      | 51        |

|          |  |            |
|----------|--|------------|
| 3.2.3    | Electrons in a Periodic Potential                                  | 53         |
| 3.2.4    | Band Structure of Typical Semiconductors                           | 57         |
| 3.2.5    | Electrons and Holes  | 63         |
| 3.2.6    | Superlattices  | 66         |
| <b>4</b> | <b>THE <math>\mathbf{k}\cdot\mathbf{p}</math>-APPROXIMATION</b>    | <b>69</b>  |
| 4.1      | General Formalism  | 69         |
| 4.1.1    | The $\mathbf{k}\cdot\mathbf{p}$ -Hamiltonian                       | 69         |
| 4.1.2    | Basis States and Matrix Elements                                   | 71         |
| 4.1.3    | Non-Degenerate Energy Bands  | 75         |
| 4.1.4    | Degenerate Energy Bands  | 76         |
| 4.2      | Band Structure of Semiconductors                                   | 78         |
| 4.2.1    | The Eigenstates at $\mathbf{k} = \mathbf{0}$                       | 79         |
| 4.2.2    | $\mathbf{k}\cdot\mathbf{p}$ Treatment of the Conduction Band       | 82         |
| 4.2.3    | $\mathbf{k}\cdot\mathbf{p}$ Treatment of the Valence Band          | 84         |
| 4.2.4    | Spin-Orbit Coupling  | 84         |
| 4.2.5    | The Valence Band near $\mathbf{k} = \mathbf{0}$                    | 87         |
| 4.2.6    | Further Refinements  | 90         |
| <b>5</b> | <b>EFFECTIVE MASS THEORY</b>                                       | <b>95</b>  |
| 5.1      | Externally Applied Fields  | 95         |
| 5.1.1    | Introduction   | 95         |
| 5.1.2    | The Hamiltonian with Externally Applied Fields                     | 97         |
| 5.1.3    | Transitions Induced by Externally Applied Fields                   | 100        |
| 5.2      | The Effective Hamiltonian  | 103        |
| 5.2.1    | Envelope Functions   | 103        |
| 5.2.2    | The $\mathbf{P}\cdot\boldsymbol{\pi}$ Method                       | 105        |
| 5.2.3    | Effective Schrödinger Equations                                    | 107        |
| 5.2.4    | Plane Waves and Bloch Functions                                    | 112        |
| 5.3      | Quantization in Effective Mass Theory                              | 113        |
| 5.3.1    | Landau Levels  | 114        |
| 5.3.2    | Hydrogenic Impurities  | 119        |
| 5.3.3    | Quantum Wells  | 123        |
| <b>6</b> | <b>THE CRYSTAL LATTICE</b>   | <b>129</b> |
| 6.1      | The Lattice Hamiltonian  | 129        |
| 6.1.1    | Reciprocal Space and Plane Standing Waves                          | 130        |
| 6.1.2    | The Lattice Hamiltonian in Reciprocal Space                        | 133        |
| 6.2      | The Phonon Spectrum of Semiconductors                              | 136        |
| 6.2.1    | Optical and Acoustical Phonon Modes                                | 136        |
| 6.2.2    | Transverse and Longitudinal Modes                                  | 143        |
| 6.2.3    | Phonon Dispersion Curves   | 147        |
| <b>7</b> | <b>ELECTRON-PHONON COUPLING</b>                                    | <b>154</b> |
| 7.1      | Electron-Phonon Coupling Mechanisms                                | 155        |
| 7.1.1    | Electron-Phonon Coupling in Reciprocal Space                       | 155        |
| 7.1.2    | $\mathbf{k}\cdot\mathbf{p}$ -Treatment of Electron-Phonon Coupling | 161        |

|          |   |            |
|----------|---|------------|
| 7.1.3    | Normal Coordinates  | 163        |
| 7.1.4    | Matrix Elements between Phonon States                                 | 166        |
| 7.1.5    | Electron–Phonon Coupling in Effective Mass Theory                     | 170        |
| 7.1.6    | Polar Semiconductors  | 172        |
| 7.2      | Electron–Phonon Coupling near the $\Gamma$ -point                     | 179        |
| 7.2.1    | Conduction Band Electron–Phonon Coupling                              | 179        |
| 7.2.2    | Hole–Phonon Coupling  | 182        |
| <b>8</b> | <b>CHARGE TRANSPORT</b>   | <b>186</b> |
| 8.1      | Quasi-Classical Motion  | 186        |
| 8.1.1    | Elements of Charge Transport  | 186        |
| 8.1.2    | The Classical Limit   | 188        |
| 8.2      | Carrier Scattering  | 192        |
| 8.2.1    | Phonon Scattering Processes   | 192        |
| 8.2.2    | Selection Rules   | 194        |
| 8.2.3    | Density of States Functions   | 197        |
| 8.2.4    | Density of States in Effective Mass Theory                            | 200        |
| 8.2.5    | Phonon Scattering Rates   | 202        |
| 8.2.6    | Impurity Scattering   | 209        |
| 8.2.7    | Screening   | 213        |
| <b>9</b> | <b>OPTICAL TRANSITIONS</b>  | <b>217</b> |
| 9.1      | Band Electrons in an Optical Field                                    | 217        |
| 9.1.1    | The Optical Field   | 218        |
| 9.1.2    | Bloch Electrons in an Optical Field                                   | 220        |
| 9.1.3    | $\mathbf{k} \cdot \mathbf{p}$ Treatment of Transition Matrix Elements | 223        |
| 9.1.4    | Effective Mass Treatment of Optical Coupling                          | 226        |
| 9.1.5    | Optical Coupling Near the $\Gamma$ -point                             | 228        |
| 9.2      | Optical Absorption  | 230        |
| 9.2.1    | Direct Semiconductors   | 232        |
| 9.2.2    | Indirect Semiconductors   | 240        |
| 9.2.3    | Quantum Wells   | 249        |
| <b>A</b> | <b>THE HYDROGEN ATOM</b>  | <b>254</b> |
| <b>B</b> | <b>THE HARMONIC OSCILLATOR</b>  | <b>259</b> |
